LilyPond

Notation Reference

The LilyPond development team

This manual provides a reference for all notation that can be produced with LilyPond version 2.25.0. It assumes that the reader is familiar with the material in the Section “Learning Manual” in Learning Manual.

For more information about how this manual fits with the other documentation, or to read this manual in other formats, see Section “Manuals” in General Information.

If you are missing any manuals, the complete documentation can be found at https://lilypond.org/.

    Clef .............................................................. 17
    Key signature ................................................... 21
    Ottava brackets ................................................ 24
    Instrument transpositions ...................................... 27
    Automatic accidentals .......................................... 29
    Alternate accidental glyphs ................................... 36
    Ambitus ......................................................... 37
  1.1.4 Note heads ................................................ 40
    Special note heads ............................................. 40
    Easy notation note heads ...................................... 42
    Shape note heads .............................................. 43
    Improvisation .................................................. 47

1.2 Rhythms ....................................................... 48
  1.2.1 Writing rhythms .......................................... 48
    Durations ....................................................... 48
    Tuplets ......................................................... 51
    Scaling durations .............................................. 56
    Ties ............................................................. 58
  1.2.2 Writing rests ............................................. 61
    Rests ........................................................... 61
    Invisible rests ................................................ 63
    Full measure rests ............................................ 66
    Caesuras ....................................................... 70
  1.2.3 Displaying rhythms ......................................... 72
    Time signature ................................................. 72
    Metronome marks ............................................... 76
    Upbeats ......................................................... 80
    Unmetered music ............................................... 81
    Polymetric notation .......................................... 83
    Automatic note splitting ...................................... 87
    Showing melody rhythms ....................................... 88
  1.2.4 Beams ..................................................... 91
    Automatic beams ............................................... 91
    Setting automatic beam behavior .............................. 94
1.3 Expressive marks

1.3.1 Expressive marks attached to notes
Articulations and ornamentations
Dynamics
New dynamic marks

1.3.2 Expressive marks as curves
Slurs
Phrasing slurs
Breath marks
Falls and doits

1.3.3 Expressive marks as lines
Glissando
Arpeggio
Trills

1.4 Repeats

1.4.1 Long repeats
Written-out repeats
Simple repeats
Alternative endings
Other variation in repeated sections
Al-fine repeats
Segno repeat structure
Segno repeat appearance
Manual repeat marks

1.4.2 Short repeats
Percent repeats
Tremolo repeats

1.5 Simultaneous notes

1.5.1 Single voice
Chorded notes
Chord repetition
Simultaneous expressions
Clusters

1.5.2 Multiple voices
Single-staff polyphony
Voice styles
Collision resolution
Merging rests

Manual beams
Feathered beams
1.2.5 Bars
Bar lines
Automatic bar lines
Bar numbers
Bar and bar number checks
Rehearsal marks
Measure counts
Section divisions

1.2.6 Special rhythmic concerns
Grace notes
Aligning to cadenzas
Time administration

1.3 Expressive marks

1.3.1 Expressive marks attached to notes
Articulations and ornamentations
Dynamics
New dynamic marks

1.3.2 Expressive marks as curves
Slurs
Phrasing slurs
Breath marks
Falls and doits

1.3.3 Expressive marks as lines
Glissando
Arpeggio
Trills

1.4 Repeats

1.4.1 Long repeats
Written-out repeats
Simple repeats
Alternative endings
Other variation in repeated sections
Al-fine repeats
Segno repeat structure
Segno repeat appearance
Manual repeat marks

1.4.2 Short repeats
Percent repeats
Tremolo repeats

1.5 Simultaneous notes

1.5.1 Single voice
Chorded notes

1 Musical notation

This chapter explains how to create musical notation.

1.1 Pitches

This section discusses how to specify the pitch of notes. There are three steps to this process: input, modification, and output.

1.1.1 Writing pitches

This section discusses how to input pitches. There are two different ways to place notes in octaves: absolute and relative mode. In most cases, relative mode will be more convenient.

Absolute octave entry

A pitch name is specified using lowercase letters a through g. The note names c to b are engraved in the octave below middle C.

```
\clef bass
\def \c4 {d e f}
\def \g4 {a b c}
\def \d4 {e f g}
```

Other octaves may be specified with a single quote (‘) or comma (,) character. Each ‘ raises the pitch by one octave; each , lowers the pitch by an octave.

```
\clef treble
```

Common octave marks can be entered just once on a reference pitch after `\fixed` placed before the music. Pitches inside `\fixed` only need `'` or `,` marks when they are above or below the octave of the reference pitch.

```latex
\fixed c' {
\clef treble
c\,4 e, g, c
\clef bass
\fixed c, {
c\,4 e, g, c
\fixed c, {c\,4 g, b, c c\,4 g, b, c}
}\rel
c\,4 e, g, c
\rel c\,4 g, b, c
\fixed c, {
c\,4 e, g, c
\fixed c, c\,4 g, b, c c\,4 g, b, c
}\rel
c\,4 e, g, c
\rel c\,4 g, b, c
```

Pitches in the music expression following `\fixed` are unaffected by any enclosing `\relative`, discussed next.

**See also**

Snippets: Section “Pitches” in Snippets.

**Relative octave entry**

Absolute octave entry requires specifying the octave for every single note. Relative octave entry, in contrast, specifies each octave in relation to the last note: changing one note’s octave will affect all of the following notes.

Relative note mode has to be entered explicitly using the `\relative` command:

```
\relative startpitch musicexpr
```

In relative mode, each note is assumed to be as close to the previous note as possible. This means that the octave of each pitch inside `musicexpr` is calculated as follows:

- If no octave changing mark is used on a pitch, its octave is calculated so that the interval with the previous note is less than a fifth. This interval is determined without considering accidentals.
• An octave changing mark ' or , can be added to respectively raise or lower a pitch by an extra octave, relative to the pitch calculated without an octave mark.

• Multiple octave changing marks can be used. For example, ' ' and ,, will alter the pitch by two octaves.

• The pitch of the first note is relative to startpitch. startpitch is specified in absolute octave mode. Which choices are meaningful?

  an octave of c
  Identifying middle C with c' is quite basic, so finding octaves of c tends to be straightforward. If your music starts with gis above c'', you’d write something like \relative c''' { gis' ... }

  an octave of the first note inside
  Writing \relative gis''' { gis ... } makes it easy to determine the absolute pitch of the first note inside.

  no explicit starting pitch
  The form \relative { gis''' ... } serves as a compact version of the previous option: the first note inside is written in absolute pitch itself. (This happens to be equivalent to choosing f as the reference pitch.)

The documentation will usually employ the last option.

Here is the relative mode shown in action:

\relative {
  \clef bass
  c d e f
g a b c
d e f g
}

Octave changing marks are used for intervals greater than a fourth:

\relative {
  c'' g c f,
c' a, e'' c
}

A note sequence without a single octave mark can nevertheless span large intervals:

\relative {
  c f b e
  a d g c
}
When `\relative` blocks are nested, the innermost \relative block starts with its own reference pitch independently of the outer \relative.

```latex
\relative {
  c' d e f
  \relative {
    c'' d e f
  }
}
```

To use absolute mode inside of \relative, put the absolute music inside `\fixed c { ... }` and the absolute pitches will not affect the octaves of the relative music:

```latex
\relative {
  c'4 \fixed c { f'' g'' } c |
  c4 \fixed c' { f g } c
}
```

\relative has no effect on \chordmode blocks.

```latex
\new Staff {
  \relative c'' {
    \chordmode { c1 }
  }
  \chordmode { c1 }
}
```

\relative is not allowed inside of \chordmode blocks.

Music inside a `\transpose` block is absolute unless a \relative is included.

```latex
\relative {
  d' e
  \transpose f g {
    d e
    \relative {
      d' e
    }
  }
}
```
If the preceding item is a chord, the first note of the chord is used as the reference point for the octave placement of a following note or chord. Inside chords, the next note is always relative to the preceding one. Examine the next example carefully, paying attention to the $c$ notes.

\relative {
  c'
  <c e g>
  <c' e g'>
  <c, e, g''>
}

As explained above, the octave of pitches is calculated only with the note names, regardless of any alterations. Therefore, an E-double-sharp following a B will be placed higher, while an F-double-flat will be placed lower. In other words, a double-augmented fourth is considered a smaller interval than a double-diminished fifth, regardless of the number of semitones that each interval contains.

\relative {
  c'2 fis
  c2 ges
  b2 eisis
  b2 feses
}

In complex situations, it is sometimes useful to get back to a certain pitch regardless of what happened before. This can be done using \resetRelativeOctave:

\relative {
  <<
    { c'2 d }
    \ 
    { e,,2 f }
  >>
  \resetRelativeOctave c''
  c2
}

Accidentals

A sharp pitch is made by adding \texttt{is} to the note name, and a flat pitch by adding \texttt{es}. As you might expect, a double sharp or double flat is made by adding \texttt{isis} or \texttt{eses}. This syntax is derived from Dutch note naming conventions. To use other names for accidentals, see \cite{Note names in other languages}, page 8.

```lilypond
\relative c'' { ais1 aes aisis aeses }
```

A natural pitch is entered as a simple note name; no suffix is required. A natural sign will be printed when needed to cancel the effect of an earlier accidental or key signature.

```lilypond
\relative c'' { a4 aes a2 }
```

Quarter tones may be added; the following is a series of Cs with increasing pitches:

```lilypond
\relative c'' { ceseh1 ces ceh c cih cis cisih }
```

Normally accidentals are printed automatically, but you may also print them manually. A reminder accidental can be forced by adding an exclamation mark \texttt{!} after the pitch. A cautionary accidental (i.e., an accidental within parentheses) can be obtained by adding the question mark \texttt{?} after the pitch.

```lilypond
\relative c'' { cis cis cis! cis? c c c! c? }
```

Accidentals on tied notes are only printed at the beginning of a new system:

```lilypond
\relative c'' {
cis1- 1-
\break
}
```
Selected Snippets

**Hiding accidentals on tied notes at the start of a new system**

This shows how to hide accidentals on tied notes at the start of a new system.

```latex
\relative c'' {
    \override Accidental.hide-tied-accidental-after-break = ##t
cis1- cis-
\break
cis
}
```

**Preventing extra naturals from being automatically added**

In accordance with traditional typesetting rules, a natural sign is printed before a sharp or flat if a previous double sharp or flat on the same note is canceled. To change this behavior to contemporary practice, set the `extraNatural` property to `f` in the `Staff` context.

```latex
\relative c'' {
    aeses4 aes ais a
    \set Staff.extraNatural = ##f
    aeses4 aes ais a
}
```

Snippets: Section “Pitches” in *Snippets.*

Known issues and warnings
There are no generally accepted standards for denoting quarter tone accidentals, so LilyPond’s symbols do not conform to any standard.

Note names in other languages
There are predefined sets of note and accidental names for various other languages. Selecting the note name language is usually done at the beginning of the file; the following example is written using Italian note names:

```
\language "italiano"

\relative {
    do' re mi sib
}
```

The available languages and the note names they define are:

<table>
<thead>
<tr>
<th>Language</th>
<th>Note Names</th>
</tr>
</thead>
<tbody>
<tr>
<td>nederlands</td>
<td>c d e f g a bes b</td>
</tr>
<tr>
<td>català or catalan</td>

</tr>
</tbody>
</table>
In Dutch, German, Norwegian, and Finnish, aes is contracted to as; in Dutch and Norwegian, however, both forms are accepted by LilyPond. Exactly the same holds for es and ees, aeses and ases, and finally eeses and eeses.

In German and Finnish, LilyPond additionally provides the more frequent form asas for aes.

\relative c' \{ a2 as e es a ases e eses \}

Some music uses microtones whose alterations are fractions of a ‘normal’ sharp or flat. The following table lists note name suffixes for quarter tone accidentals; here the prefixes semi- and sesqui- respectively mean ‘half’ and ‘one and a half’.

<table>

</tbody>
</table>

In German, there are similar name contractions for microtones as with normal pitches described above.

\language "deutsch"

\relative c' \{ asah2 eh aih eisih \}

Most languages presented here are commonly associated with Western classical music, also referred to as Common Practice Period. However, alternate pitches and tuning systems are also supported: see Section 2.10.1 [Common notation for non-Western music], page 521.
See also
Notation Reference: Section 2.10.1 [Common notation for non-Western music], page 521.
Installed Files: scm/define-note-names.scm.
Snippets: Section “Pitches” in Snippets.

1.1.2 Changing multiple pitches
This section discusses how to modify pitches.

Octave checks
In relative mode, it is easy to forget an octave changing mark. Octave checks make such errors easier to find by displaying a warning and correcting the octave if a note is found in an unexpected octave.

To check the octave of a note, specify the absolute octave after the \= symbol. This example will generate a warning (and change the pitch) because the second note is the absolute octave d'' instead of d' as indicated by the octave correction.

\relative { c''2 d=\= e2 f} /noteheads.s1 /noteheads.s1/clefs.G/timesig.C44

The octave of notes may also be checked with the \octaveCheck controlpitch command. controlpitch is specified in absolute mode. This checks that the interval between the previous note and the controlpitch is within a fourth (i.e., the normal calculation of relative mode). If this check fails, a warning is printed. While the previous note itself is not changed, future notes are relative to the corrected value.

\relative { c''2 d \octaveCheck c' e2 f} /noteheads.s1 /noteheads.s1/clefs.G/timesig.C44

Compare the two bars below. The first and third \octaveCheck checks fail, but the second one does not fail.

\relative { c''4 f g f \octaveCheck c' f \octaveCheck c' g} /noteheads.s1 /noteheads.s1/clefs.G/timesig.C44
A music expression can be transposed with \transpose. The syntax is

\transpose frompitch topitch musicexpr

This means that musicexpr is transposed by the interval between the pitches frompitch and topitch: any note with pitch frompitch is changed to topitch and any other note is transposed by the same interval. Both pitches are entered in absolute mode.

\begin{itemize}
  \item \textbf{Note:} Music inside a \texttt{\transpose} block is absolute unless a \texttt{\relative} is included in the block.
\end{itemize}

Consider a piece written in the key of D-major. It can be transposed up to E-major; note that the key signature is automatically transposed as well.

\begin{verbatim}
\transpose d e {
  \relative {
    \key d \major
    d'4 fis a d
  }
}
\end{verbatim}

If a part written in C (normal concert pitch) is to be played on the A clarinet (for which an A is notated as a C and thus sounds a minor third lower than notated), the appropriate part will be produced with:

\begin{verbatim}
\transpose a c' {
  \relative {
    \key c \major
    c'4 d e g
  }
}
\end{verbatim}

Note that we specify \texttt{\key c \major} explicitly. If we do not specify a key signature, the notes will be transposed but no key signature will be printed.
\transpose distinguishes between enharmonic pitches: both \transpose c cis or \transpose c des will transpose up a semitone. The first version will print sharps and the notes will remain on the same scale step, the second version will print flats on the scale step above.

\begin{verbatim}
\definemusic
\new Staff {
\transpose c cis { \definemusic }
\transpose c des { \definemusic }
}
\end{verbatim}

\transpose may also be used in a different way, to input written notes for a transposing instrument. The previous examples show how to enter pitches in C (or concert pitch) and typeset them for a transposing instrument, but the opposite is also possible if you for example have a set of instrumental parts and want to print a conductor’s score. For example, when entering music for a B-flat trumpet that begins on a notated E (concert D), one would write:

\begin{verbatim}
musicInBflat = { e4 ... }
\transpose c bes, \musicInBflat
\end{verbatim}

To print this music in F (e.g., rearranging to a French horn) you could wrap the existing music with another \transpose:

\begin{verbatim}
\transpose f c' { \transpose c bes, \musicInBflat }
\end{verbatim}

For more information about transposing instruments, see [Instrument transpositions], page 27.

Selected Snippets

Transposing pitches with minimum accidentals ("Smart" transpose)

This example uses some Scheme code to enforce enharmonic modifications for notes in order to have the minimum number of accidentals. In this case, the following rules apply:

- Double accidentals should be removed
- B sharp -> C
- E sharp -> F
- C flat -> B
- F flat -> E

In this manner, the most natural enharmonic notes are chosen.

\begin{verbatim}
#(define (naturalize-pitch p)
  (let ((o (ly:pitch-octave p))
        (a (* 4 (ly:pitch-alteration p)))
        ;; alteration, a, in quarter tone steps,
        ;; for historical reasons
        (n (ly:pitch-notename p)))
    (cond
      ((and (> a 1) (or (eqv? n 6) (eqv? n 2)))
       (set! a (- a 2))
       (set! n (+ n 1))
      ((and (< a -1) (or (eqv? n 0) (eqv? n 3))))
    ))
\end{verbatim}
(set! a (+ a 2))
(set! n (~ n 1)))

(cond
  ((> a 2) (set! a (- a 4)) (set! n (+ n 1)))
  ((< a -2) (set! a (+ a 4)) (set! n (~ n 1)))
  (if (< n 0) (begin (set! o (~ o 1)) (set! n (+ n 7)))
    (if (> n 6) (begin (set! o (+ o 1)) (set! n (~ n 7)))
      (ly:make-pitch o n (/ a 4))))

#(define (naturalize music)
  (let ((es (ly:music-property music 'elements))
         (e (ly:music-property music 'element))
         (p (ly:music-property music 'pitch)))
    (if (pair? es)
        (ly:music-set-property! music 'elements
          (map naturalize es)))
    (if (ly:music? e)
        (ly:music-set-property! music 'element
          (naturalize e)))
    (if (ly:pitch? p)
        (begin
          (set! p (naturalize-pitch p))
          (ly:music-set-property! music 'pitch p)))
    music))

naturalizeMusic =
#(define-music-function (m)
  (ly:music? (ly:make-music m)))

music = \relative c' { c4 d e g }

\score {
  \new Staff {
    \transpose c ais { \music }
    \naturalizeMusic \transpose c ais { \music }
    \transpose c deses { \music }
    \naturalizeMusic \transpose c deses { \music }
  }
  \layout { }
}

Snippets: Section “Pitches” in Snippets.
**Internals Reference**: Section “TransposedMusic” in *Internals Reference*.

### Known issues and warnings

The relative conversion will not affect \transpose, \chordmode or \relative sections in its argument. To use relative mode within transposed music, an additional \relative must be placed inside \transpose.

Triple accidentals will not be printed if using \transpose. An ‘enharmonically equivalent’ pitch will be used instead (e.g., d-flat rather than e-triple-flat).

### Inversion

A music expression can be inverted and transposed in a single operation with:

\begin{verbatim}
\inversion around-pitch to-pitch musicexpr
\end{verbatim}

The \texttt{musicexpr} is inverted interval by interval around \texttt{around-pitch}, and then transposed so that \texttt{around-pitch} is mapped to \texttt{to-pitch}.

\begin{verbatim}
\music = \relative { c' d e f }
\new Staff {
    \music
    \inversion d' d' \music
    \inversion d' ees' \music
}
\end{verbatim}

\begin{figure}
\centering
\includegraphics{noteheads.s2}
\caption{Note: Motifs to be inverted should be expressed in absolute form or be first converted to absolute form by enclosing them in a \relative block.}
\end{figure}

### See also

Notation Reference: [Modal transformations], page 15, [Retrograde], page 14, [Transpose], page 11.

### Retrograde

A music expression can be reversed to produce its retrograde:

\begin{verbatim}
\music = \relative { c'8. ees16( fis8. a16 b8.) gis16 f8. d16 }
\end{verbatim}

\begin{verbatim}
\new Staff {
    \music
    \retrograde \music
}
\end{verbatim}

\begin{figure}
\centering
\includegraphics{noteheads.s2}
\caption{Known issues and warnings}
\end{figure}

\begin{verbatim}
\retrograde is a rather simple tool. Since many events are ‘mirrored’ rather than exchanged, tweaks and directional modifiers for opening spanners need to be added at the matching closing
\end{verbatim}
spans. `( needs to be ended by `), every `<` or `cresc` needs to be ended by `\` or `\endcr`, every `>` or `decr` needs to be ended by `\enddecr`. Property-changing commands/overrides with a lasting effect will likely cause surprises.

See also
Notation Reference: [Inversion], page 14, [Modal transformations], page 15, [Transpose], page 11.

Modal transformations
In a musical composition that is based on a scale, a motif is frequently transformed in various ways. It may be transposed to start at different places in the scale or it may be inverted around a pivot point in the scale. It may also be reversed to produce its retrograde, see [Retrograde], page 14.

Note: Any note that does not lie within the given scale will be left untransformed.

Modal transposition
A motif can be transposed within a given scale with:

\modalTranspose from-pitch to-pitch scale motif

The notes of motif are shifted within the scale by the number of scale degrees given by the interval between to-pitch and from-pitch:

\begin{verbatim}
diatonicScale = \relative { c’ d e f g a b } 
motif = \relative { c’8 d e f g a b c } 
\end{verbatim}

\new Staff { 
\motif 
\modalTranspose c f \diatonicScale \motif 
\modalTranspose c b, \diatonicScale \motif 
}

\begin{verbatim}
\new Staff { 
\motif 
\modalTranspose ges ees' \pentatonicScale \motif 
}
\end{verbatim}

An ascending scale of any length and with any intervals may be specified:

\begin{verbatim}
pentatonicScale = \relative { ges aes bes des ees } 
motif = \relative { ees’8 des ,4 <ges’ bes ,> <ges bes ,> } 
\end{verbatim}

\new Staff { 
\motif 
\modalTranspose ges ees' \pentatonicScale \motif 
}

When used with a chromatic scale \modalTranspose has a similar effect to \transpose, but with the ability to specify the names of the notes to be used:

\begin{verbatim}
chromaticScale = \relative { c’ cis d dis e fis g gis a ais b } 
\end{verbatim}
Motif inversion

A motif can be inverted within a given scale around a given pivot note and transposed in a single operation with:

```
\modalInversion around-pitch to-pitch scale motif
```

The notes of motif are placed the same number of scale degrees from the around-pitch note within the scale, but in the opposite direction, and the result is then shifted within the scale by the number of scale degrees given by the interval between to-pitch and around-pitch.

So to simply invert around a note in the scale use the same value for around-pitch and to-pitch:

```
octatonicScale = \relative { ees' f fis gis a b c d }
motif = \relative { c'8. ees16 fis8. a16 b8. gis16 f8. d16 }
```

```
\new Staff {
    \motif
    \modalInversion fis' fis' \octatonicScale \motif
}
```

To invert around a pivot between two notes in the scale, invert around one of the notes and then transpose by one scale degree. The two notes specified can be interpreted as bracketing the pivot point:

```
scale = \relative { c' g' }
motive = \relative { c' c g' c, }
```

```
\new Staff {
    \motive
    \modalInversion c' g' \scale \motive
}
```

The combined operation of inversion and retrograde produce the retrograde inversion:

```
octatonicScale = \relative { ees' f fis gis a b c d }
motif = \relative { c'8. ees16 fis8. a16 b8. gis16 f8. d16 }
```

```
\modalInversion around-pitch to-pitch scale motif
```

```
\new Staff { 
\motif \retrograde \modalInversion c’ c’ \octatonicScale \motif
}

See also
Notation Reference: [Inversion], page 14, [Retrograde], page 14, [Transpose], page 11.

1.1.3 Displaying pitches
This section discusses how to alter the output of pitches.

Clef
Without any explicit command, the default clef for LilyPond is the treble (or $G$) clef.
\[ c’2 c’ \]

However, the clef can be changed by using the \clef command and an appropriate clef name. 
Middle $C$ is shown in each of the following examples.
\[ \clef treble c’2 c’ \]
\[ \clef alto c’2 c’ \]
\[ \clef tenor c’2 c’ \]
\[ \clef bass c’2 c’ \]

For the full range of possible clef names see Section A.11 [Clef styles], page 751.

Specialized clefs, such as those used in Ancient music, are described in [Mensural clefs], page 495, and [Gregorian clefs], page 502. Music that requires tablature clefs is discussed in [Default tablatures], page 393, and [Custom tablatures], page 411.

For mixing clefs when using cue notes, see the \cuelF and \cueduringWithClef commands in [Formatting cue notes], page 241.

By adding \_8 or \^8 to the clef name, the clef is transposed one octave down or up respectively, and \_15 and \^15 transpose by two octaves. Other integers can be used if required. Clef names containing non-alphabetic characters must be enclosed in quotes
\[ \clef treble c’2 c’ \]
\[ \clef "treble_8" \]
Optional octavation can be obtained by enclosing the numeric argument in parentheses or brackets:
\begin{verbatim}
\clef "treble_(8)"
c'2 c'
\clef "bass-[15]"
c'2 c'
\end{verbatim}

The pitches are displayed as if the numeric argument were given without parentheses/brackets.

By default, a clef change taking place at a line break will cause the new clef symbol to be printed at the end of the previous line, as a \textit{warning} clef, as well as the beginning of the next. This \textit{warning} clef can be suppressed.

\begin{verbatim}
\clef treble { c'2 c' } \break
\clef bass { c'2 c' } \break
\clef alto
\set Staff.explicitClefVisibility = #end-of-line-invisible
{ c'2 c' } \break
\unset Staff.explicitClefVisibility
\clef bass { c'2 c' } \break
\end{verbatim}
By default, a clef that has previously been printed will not be reprinted if the same `\clef` command is issued again and will be ignored. The command `\set Staff.forceClef = ##t` changes this behavior.

```
clef treble
c‘1
\clef treble
c‘1
\set Staff.forceClef = ##t
c‘1
\clef treble
c‘1
```

To be more precise, it is not the `\clef` command itself that prints a clef. Instead, it sets or changes a property of the Clef_engraver, which then decides by its own whether to display a clef or not in the current staff. The `forceClef` property overrides this decision locally to reprint a clef once.

When there is a manual clef change, the glyph of the changed clef will be smaller than normal. This behavior can be overridden.

```
clef "treble"
c‘1
\clef "bass"
c‘1
\clef "treble"
c‘1
\override Staff.Clef.full-size-change = ##t
\clef "bass"
c‘1
\clef "treble"
c‘1
\revert Staff.Clef.full-size-change
\clef "bass"
c‘1
\clef "treble"
c‘1
```

Selected Snippets

**Tweaking clef properties**

Changing the Clef glyph, its position, or the ottavation does not change the position of subsequent notes on the staff. To get key signatures on their correct staff lines `middleCClefPosition` must also be specified, with positive or negative values moving middle C up or down respectively, relative to the staff’s center line.
For example, \texttt{\textbackslash clef "treble\_8"} is equivalent to setting the \texttt{clefGlyph}, \texttt{clefPosition} (the vertical position of the clef itself on the staff), \texttt{middleCPosition} and \texttt{clefTransposition}. Note that when any of these properties (except \texttt{middleCPosition}) are changed a new clef symbol is printed.

The following examples show the possibilities when setting these properties manually. On the first line, the manual changes preserve the standard relative positioning of clefs and notes, whereas on the second line, they do not.

```
{  
  % The default treble clef
  \key f \major
  c'1
  % The standard bass clef
  \set Staff.clefGlyph = #"clefs.F"
  \set Staff.clefPosition = #2
  \set Staff.middleCPosition = #6
  \set Staff.middleCClefPosition = #6
  \key g \major
  c'1
  % The baritone clef
  \set Staff.clefGlyph = #"clefs.C"
  \set Staff.clefPosition = #4
  \set Staff.middleCPosition = #4
  \set Staff.middleCClefPosition = #4
  \key f \major
  c'1
  % The standard choral tenor clef
  \set Staff.clefGlyph = #"clefs.G"
  \set Staff.clefPosition = #-2
  \set Staff.clefTransposition = #-7
  \set Staff.middleCPosition = #1
  \set Staff.middleCClefPosition = #1
  \key f \major
  c'1
  % A non-standard clef
  \set Staff.clefPosition = #0
  \set Staff.clefTransposition = #0
  \set Staff.middleCPosition = #-4
  \set Staff.middleCClefPosition = #-4
  \key g \major
  c'1 \break
  % The following clef changes do not preserve
  % the normal relationship between notes, key signatures
  % and clefs:

  \set Staff.clefGlyph = #"clefs.F"
  \set Staff.clefPosition = #2
  c'1
  \set Staff.clefGlyph = #"clefs.G"
  c'1
  \set Staff.clefGlyph = #"clefs.C"
```
c'1
\set Staff.clefTransposition = #7
c'1
\set Staff.clefTransposition = #0
\set Staff.clefPosition = #0
c'1

% Return to the normal clef:
\set Staff.middleCPosition = #0
c'1
}

Known issues and warnings
Ottavation numbers attached to clefs are treated as separate grobs. So any \override done to the Clef will also need to be applied, as a separate \override, to the ClefModifier grob.

\new Staff \with {
  \override Clef.color = #(universal-color 'blue)
  \override ClefModifier.color = #(universal-color 'vermilion)
}
\clef "treble_8" c'4

Key signature
Note: New users are sometimes confused about accidentals and key signatures. In LilyPond, note names are the raw input; key signatures and clefs determine how this raw input is displayed. An unaltered note like c means ‘C natural’, regardless of the key signature or clef. For more information, see Section “Pitches and key signatures” in Learning Manual.

The key signature indicates the tonality in which a piece is played. It is denoted by a set of alterations (flats or sharps) at the start of the staff. The key signature may be altered:

\key pitch mode

Here, \mode should be \major or \minor to get a key signature of pitch-major or pitch-minor, respectively. You may also use the standard mode names, also called church modes: \ionian, \dorian, \phrygian, \lydian, \mixolydian, \aeolian, and \locrian.

\relative {
  \key g \major
  fis''1
  f
  fis
}

Additional modes can be defined, by listing the alterations for each scale step when the mode starts on C.

\freygish = #~((0 ,NATURAL) (1 ,FLAT) (2 ,NATURAL)
(3 ,NATURAL) (4 ,NATURAL) (5 ,FLAT) (6 ,FLAT))

\relative {
  \key c \freygish c'4 des e f
  \bar "||" \key d \freygish d es fis g
}

Accidentals in the key signature may be printed in octaves other than their traditional positions, or in multiple octaves, by using the flat-positions and sharp-positions properties of KeySignature. Entries in these properties specify the range of staff positions where accidentals will be printed. If a single position is specified in an entry, the accidentals are placed within the octave ending at that staff position.

\override Staff.KeySignature.flat-positions = #'((-5 . 5))
\override Staff.KeyCancellation.flat-positions = #'((-5 . 5))
\clef bass \key es \major es g bes d'
\clef treble \bar "||" \key es \major es' g' bes' d''
\override Staff.KeySignature.sharp-positions = #'(2)
\bar "||" \key b \major b' fis' b'2
Chapter 1: Musical notation

Selected Snippets

**Preventing natural signs from being printed when the key signature changes**

When the key signature changes, natural signs are automatically printed to cancel any accidentals from previous key signatures. This may be prevented by setting to $\texttt{f}$ the \texttt{printKeyCancellation} property in the Staff context.

\begin{verbatim}
\relative c' {
  \key d \major
  a4 b cis d
  \key g \minor
  a4 bes c d
  \set Staff.printKeyCancellation = ##f
  \key d \major
  a4 b cis d
  \key g \minor
  a4 bes c d
}
\end{verbatim}

**Non-traditional key signatures**

The commonly used \texttt{\key} command sets the \texttt{keyAlterations} property, in the Staff context.

To create non-standard key signatures, set this property directly. The format of this command is a list:

\begin{verbatim}
\set Staff.keyAlterations = #`(((octave . step) . alter) ((octave . step) . alter) ...)
\end{verbatim}

where, for each element in the list, \texttt{octave} specifies the octave (0 being the octave from middle C to the B above), \texttt{step} specifies the note within the octave (0 means C and 6 means B), and \texttt{alter} is \texttt{SHARP}, \texttt{FLAT}, \texttt{DOUBLE-SHARP} etc.

Alternatively, using the more concise format for each item in the list (\texttt{step . alter}) specifies the same alteration holds in all octaves.

For microtonal scales where a “sharp” is not 100 cents, alter refers to the alteration as a proportion of a 200-cent whole tone.

\begin{verbatim}
\include "arabic.ly"
\relative do' {
  \set Staff.keyAlterations = #`((0 . ,SEMI-FLAT)
    (1 . ,SEMI-FLAT)
    (2 . ,FLAT)
    (5 . ,FLAT)
    (6 . ,SEMI-FLAT))
  \set Staff.extraNatural = ##f
  re reb \dwn reb read
  dod dob dosd \dwn dob |
\end{verbatim}

Ottava brackets

Ottava brackets introduce an extra transposition of an octave for the staff:

```
\relative c' { 
  a2 b 
  \ottava #\-2 
  a2 b 
  \ottava #\-1 
  a2 b 
  \ottava #0 
  a2 b 
  \ottava #1 
  a2 b 
  \ottava #2 
  a2 b 
}
```

By default, only a number is printed at the start of the bracket. That setting may be changed to include an abbreviated ordinal, either in superscript or in normal letters (the latter was formerly used by default); the default bold font weight of these characters may also be altered, as explained in [Selecting font and font size], page 291.

The following example demonstrates various options, as well as how to go back to the current default behavior:

```
\relative c' { 
  \ottava #1 
  a\'2 b 
  \ottava #2 
  a\'2 b 
}
```
\bar "||"
\set Staff.ottavationMarkups = #ottavation-ordinals
\ottava #1
a,2 b
\ottava #2
a'2 b
\bar "||"
\override Staff.OttavaBracket.font-series = #'medium
\set Staff.ottavationMarkups = #ottavation-simple-ordinals
\ottava #1
a,2 b
\ottava #2
a'2 b
\bar "||"
\revert Staff.OttavaBracket.font-series
\set Staff.ottavationMarkups = #ottavation-numbers
\ottava #1
a,2 b
\ottava #2
a'2 b
}

\begin{music}
\begin{staff}
\textit{8\ldots1 15\ldots1 8va\ldots1 15ma\ldots1 8va\ldots1 15ma\ldots1 8\ldots1 15\ldots1}
\end{staff}
\end{music}

Selected Snippets

**Changing ottava text**

Internally, \ottava sets the properties ottavation (for example, to 8va or 8vb) and middleCPosition. To override the text of the bracket, set ottavation after invoking \ottava.

Short text is especially useful when a brief ottava is used.

\begin{music}
\begin{staff}
\textit{c'2}
\ottava #1
\set Staff.ottavation = "8"
c''2
\ottava #0
c'1
\ottava #1
\set Staff.ottavation = "Text"
c''1
\end{staff}
\end{music}

**Adding an ottava marking to a single voice**

If you have more than one voice on the staff, setting octavation in one voice transposes the position of notes in all voices for the duration of the ottava bracket. If the octavation is only
intended to apply to one voice, the Ottava_spanner_engraver should be moved to Voice context.

\layout {
  \context {
    \Staff
    \remove Ottava_spanner_engraver
  }
  \context {
    \Voice
    \consists Ottava_spanner_engraver
  }
}

\clef bass
<< \g { d'}- q2 \c' e'} \\
{ r2. \ottava -1 \b, , , b,,, , >4 - | q2 \ottava 0 \c e>2 }
>>

Modifying the Ottava spanner slope

It is possible to change the slope of the Ottava spanner.

\relative c' {
  \override Staff.OttavaBracket.stencil = #ly:line-spanner::print
  \override Staff.OttavaBracket.bound-details = #`(left . ((Y . 0)
    (attach-dir . ,LEFT)
    (padding . 0)
    (stencil-align-dir-y . ,CENTER)))
    (right . ((Y . 5.0) ; Change the number here
        (padding . 0)
        (attach-dir . ,RIGHT)
        (text . ,(make-draw-dashed-line-markup
            (cons 0 -1.2)))))
  \override Staff.OttavaBracket.left-bound-info = #ly:horizontal-line-spanner::calc-left-bound-info-and-text
  \override Staff.OttavaBracket.right-bound-info =
Instrument transpositions

When typesetting scores that involve transposing instruments, some parts can be typeset in a different pitch than the concert pitch. In these cases, the key of the transposing instrument should be specified; otherwise the MIDI output and cues in other parts will produce incorrect pitches. For more information about quotations, see [Quoting other voices], page 237.

\transposition pitch

The pitch to use for \transposition should correspond to the real sound heard when a c' written on the staff is played by the transposing instrument. This pitch is entered in absolute mode, so an instrument that produces a real sound which is one tone higher than the printed music should use \transposition d'. \transposition should only be used if the pitches are not being entered in concert pitch.

Here are a few notes for violin and B-flat clarinet where the parts have been entered using the notes and key as they appear in each part of the conductor’s score. The two instruments are playing in unison.

\new GrandStaff <<
\new Staff = "violin" \with {
  instrumentName = "Vln"
  midiInstrument = "violin"
}
\relative c'' {
  % not strictly necessary, but a good reminder
  \transposition c'
  \key c \major
  g4( c8) r c r c4
}
\new Staff = "clarinet" \with {
  instrumentName = \markup { Cl (B\flat) }
  midiInstrument = "clarinet"
}
\relative c'' {
Chapter 1: Musical notation

The \transposition may be changed during a piece. For example, a clarinetist may be required to switch from an A clarinet to a B-flat clarinet.

\addQuote "clarinet" \clarinet

Snippets: Section “Pitches” in Snippets.
Automatic accidentals
There are many different conventions on how to typeset accidentals. LilyPond provides a function to specify which accidental style to use. This function is called as follows:

```lilypond
\new Staff <<
  \accidentalStyle voice
  { ... }
>>
```

The accidental style normally applies to the current Staff (with the exception of the styles choral, piano and piano-cautionary, which are explained below). Optionally, the function can take a second argument that determines in which scope the style should be changed. For example, to use the same style in all staves of the current StaffGroup, use:

```lilypond
\accidentalStyle StaffGroup.voice
```

The following accidental styles are supported. To demonstrate each style, we use the following example:

```lilypond
musicA = {
  <<
    \relative {
      cis'8 fis, bes4 <a cis>8 f bis4 |
      cis2. <c, g'>4 |
    }
    \relative {
      ais'2 cis, |
      fis8 b a4 cis2 |
    }
  >>
}

musicB = {
  \clef bass
  \new Voice {
    \voiceTwo \relative {
      <fis a cis>8[ <fis a cis>
      \change Staff = up
cis' cis
      \change Staff = down
      <fis, a> <fis a>]
    \showStaffSwitch
    \change Staff = up
dis'4 |
    \change Staff = down
      <fis, a cis>4 gis <f a d>2 |
  }
}

\new PianoStaff {
  <<
    \new Staff = "up" {
      \accidentalStyle default
```
Note that the last lines of this example can be replaced by the following, as long as the same accidental style should be used in both staves.

\new PianoStaff {
  \new Staff = "up" {
    \accidentalStyle Score.default
    \musicA
  }
  \new Staff = "down" {
    \accidentalStyle default
    \musicB
  }
  >>
}

default

This is the default typesetting behavior. It corresponds to eighteenth-century common practice: accidentals are remembered to the end of the measure in which they occur and only in their own octave. Thus, in the example below, no natural signs are printed before the b in the second measure or the last c:

The normal behavior is to remember the accidentals at Staff-level. In this style, however, accidentals are typeset individually for each voice. Apart from that, the rule is similar to default.

As a result, accidentals from one voice do not get canceled in other voices, which is often an unwanted result: in the following example, it is hard to determine whether the second a should be played natural or sharp. The voice option should therefore be used only if the voices are to be read solely by individual musicians. If the staff
is to be used by one musician (e.g., a conductor or in a piano score) then modern or modern-cautionary should be used instead.

This rule corresponds to the common practice in the twentieth century. It omits some extra natural signs, which were traditionally prefixed to a sharp following a double sharp, or a flat following a double flat. The modern rule prints the same accidentals as default, with two additions that serve to avoid ambiguity: after temporary accidentals, cancellation marks are printed also in the following measure (for notes in the same octave) and, in the same measure, for notes in other octaves. Hence the naturals before the b and the c in the second measure of the upper staff:

This rule is similar to modern, but the ‘extra’ accidentals are printed as cautionary accidentals (with parentheses). They can also be printed at a different size by overriding AccidentalCautionary’s font-size property.

This rule is used for multivoice accidentals to be read both by musicians playing one voice and musicians playing all voices. Accidentals are typeset for each voice, but they are canceled across voices in the same Staff. Hence, the a in the last measure is canceled because the previous cancellation was in a different voice, and the d in the lower staff is canceled because of the accidental in a different voice in the previous measure:
modern-voice-cautionary
This rule is the same as modern-voice, but with the extra accidentals (the ones not typeset by voice) typeset as cautionaries. Even though all accidentals typeset by default are typeset with this rule, some of them are typeset as cautionaries.

![Example of modern-voice-cautionary](image)

piano
This rule reflects twentieth-century practice for piano notation. Its behavior is very similar to modern style, but here accidentals also get canceled across the staves in the same GrandStaff or PianoStaff, hence all the cancellations of the final notes. This accidental style applies to the current GrandStaff or PianoStaff unless qualified with a second argument.

![Example of piano](image)

piano-cautionary
This is the same as piano but with the extra accidentals typeset as cautionaries.

![Example of piano-cautionary](image)

choral
This rule is a combination of the modern-voice and the piano style. It shows all accidentals required for singers that only follow their own voice, as well as additional accidentals for readers that follow all voices of an entire ChoirStaff simultaneously. This accidental style applies to the current ChoirStaff unless qualified with a second argument.

![Example of choral](image)

choral-cautionary
This is the same as choral but with the extra accidentals typeset as cautionaries.
This rule reproduces a common practice in contemporary music: accidentals are printed like with modern, but they are printed again if the same note appears later in the same measure – except if the note is immediately repeated.

This rule is similar to neo-modern, but the ‘extra’ accidentals are printed as cautionary accidentals (with parentheses). They can also be printed at a different size by overriding AccidentalCautionary's font-size property.

This rule is used for multivoice accidentals to be read both by musicians playing one voice and musicians playing all voices. Accidentals are typeset for each voice as with neo-modern, but they are canceled across voices in the same Staff.

This rule is similar to neo-modern-voice, but the extra accidentals are printed as cautionary accidentals.
dodecaphonic
This rule reflects a practice introduced by composers at the beginning of the 20th century, in an attempt to abolish the hierarchy between natural and non-natural notes. With this style, every note gets an accidental sign, including natural signs.

![Dodecaphonic notation example]

dodecaphonic-no-repeat
Like with the dodecaphonic accidental style every note gets an accidental sign by default, but accidentals are suppressed for pitches immediately repeated within the same staff.

![Dodecaphonic-no-repeat notation example]

dodecaphonic-first
Similar to the dodecaphonic accidental style every pitch gets an accidental sign, but only the first time it is encountered in a measure. Accidentals are only remembered for the actual octave but throughout voices.

![Dodecaphonic-first notation example]

Teaching
This rule is intended for students, and makes it easy to create scale sheets with automatically created cautionary accidentals. Accidentals are printed like with modern, but cautionary accidentals are added for all sharp or flat tones specified by the key signature, except if the note is immediately repeated.

![Teaching notation example]

no-reset
This is the same as default but with accidentals lasting ‘forever’ and not only within the same measure:

![No-reset notation example]
forget

This is the opposite of no-reset: Accidentals are not remembered at all – and hence all accidentals are typeset relative to the key signature, regardless of what came before in the music.

Known issues and warnings

Simultaneous notes are not considered in the automatic determination of accidentals; only previous notes and the key signature are considered. Forcing accidentals with ! or ? may be required when the same note name occurs simultaneously with different alterations, as in ‘<f! fis!>’.

In alternative endings, cautionary cancellation should be based on the previous played measure, but it is based on the previous printed measure. In the following example, the natural c in the second alternative does not need a natural sign:

The following workaround can be used: define a function that locally changes the accidental style to forget:

```scheme
forget = #(define-music-function (music) (ly:music?) #{
    \accidentalStyle forget
    #music
    \accidentalStyle modern
    #})
{
    \accidentalStyle modern
    \time 2/4
    \repeat volta 2 {
        \c'2
    }
}
```
Alternate accidental glyphs

Non-Western and ancient notation systems have their own accidentals. The glyphs are controlled through the alterationGlyphs property of the Staff context and similar context types. The predefined values for this property are listed in Section A.10 [Accidental glyph sets], page 750.

```
\layout {
  \context {
    \Staff
    alterationGlyphs = #alteration-vaticana-glyph-name-alist
  }
}
{ ces' c' cis' }
```

The property may also be set to a custom associative list mapping alterations to glyph names. Alterations are given as fractions in tones. Glyphs are listed at [Accidental glyphs], page 737.

```
\layout {
  \context {
    \Staff
    alterationGlyphs =
    #'((-1/2 . "accidentals.flat.arrowdown"
      (0 . "accidentals.natural.arrowup"
       (1/2 . "accidentals.sharp.arrowup"))
  }
}
{ ces' c' cis' }
```

The padding-pairs property of KeySignature and KeyCancellation objects is an associative list mapping pairs of glyphs to the padding that should be added between these glyphs in key signatures.

```
\layout {
  \context {
```
The term *ambitus* (pl. ambitus) denotes a range of pitches for a given voice in a part of music. It may also denote the pitch range that a musical instrument is capable of playing. Ambitus are printed on vocal parts so that performers can easily determine if it matches their capabilities.

Ambitus are denoted at the beginning of a piece near the initial clef. The range is graphically specified by two note heads that represent the lowest and highest pitches. Accidentals are only printed if they are not part of the key signature.
Selected Snippets

*Adding ambitus per voice*

Ambitus can be added per voice. In this case, the ambitus must be moved manually to prevent collisions.

\new Staff <<
\new Voice \with {\
  \consists "Ambitus_engraver"
} \relative c'' {\
  \override Ambitus.X-offset = #2.0
  \voiceOne
  c4 a d e
  f1
}
\new Voice \with {\
  \consists "Ambitus_engraver"
} \relative c' {\
  \voiceTwo
  es4 f g as
  b1
}
>>

*Ambitus with multiple voices*

Adding the Ambitus_engraver to the Staff context creates a single ambitus per staff, even in the case of staves with multiple voices.

\new Staff \with {\
  \consists "Ambitus_engraver"
}
<<
\new Voice \relative c'' {\
  \voiceOne
  c4 a d e
  f1
}
\new Voice \relative c' {\
  \voiceTwo
  es4 f g as
  b1
}
Changing the ambitus gap

It is possible to change the default gap between the ambitus noteheads and the line joining them.

\layout {
\context {
\Voice
\consists "Ambitus_engraver"
}\}

\new Staff {
\time 2/4
% Default setting
c'4 g''
}\}

\new Staff {
\time 2/4
\override AmbitusLine.gap = #0
c'4 g''
}\}

\new Staff {
\time 2/4
\override AmbitusLine.gap = #1
c'4 g''
}\}

\new Staff {
\time 2/4
\override AmbitusLine.gap = #1.5
c'4 g''
}\}
Chapter 1: Musical notation

Ambitus after key signature

By default, ambitus are positioned at the left of the clef. The \ambitusAfter function allows for changing this placement. Syntax is \ambitusAfter grob-interface (see Graphical Object Interfaces (http://lilypond.org/doc/v2.22/Documentation/internals/graphical-object-interfaces) for a list of possible values for grob-interface.)

A common use case is printing the ambitus between key signature and time signature.

\new Staff \with {
  \consists Ambitus_engraver
} \relative {
  \ambitusAfter key-signature
  \key d \major
  es'8 g bes cis d2
}

See also

Snippets: Section “Pitches” in Snippets.

Known issues and warnings

There is no collision handling in the case of multiple per-voice ambitus.

1.1.4 Note heads

This section suggests ways of altering note heads.

Special note heads

The appearance of note heads may be altered:

\relative c’ { 
  c4 b 
  \override NoteHead.style = #'cross 
  c4 b 
  \revert NoteHead.style 
  a b 
  \override NoteHead.style = #'harmonic 
  a b 
  \revert NoteHead.style 
  c4 d e f 
}
To see all note head styles, see Section A.9 [Note head styles], page 749.

The cross style is used to represent a variety of musical intentions. The following generic predefined commands modify the note head in both staff and tablature contexts and can be used to represent any musical meaning:

\relative {
  c''4 b
  \xNotesOn
  a b c4 b
  \xNotesOff
  c4 d
}

The music function form of this predefined command may be used inside and outside chords to generate crossed note heads in both staff and tablature contexts:

\relative {
  c''4 b
  \xNote { e f }
  c b < g \xNote c f > b
}

As synonyms for \xNote, \xNotesOn and \xNotesOff, \deadNote, \deadNotesOn and \deadNotesOff can be used. The term dead note is commonly used by guitarists.

There is also a similar shorthand for diamond shapes:

\relative c' {
  <c f\harmonic>2 <d a'\harmonic>4 <c g'\harmonic> f\harmonic
}

**Predefined commands**

\harmonic, \xNotesOn, \xNotesOff, \xNote.

\( \texttt{\#(set-global-staff-size 26)} \)
\( \texttt{\layout} \)
In shape note head notation, the shape of the note head corresponds to the harmonic function of a note in the scale. This notation was popular in nineteenth-century American song books. Shape note heads can be produced in Sacred Harp, Southern Harmony, Funk (Harmonia Sacra), Walker, and Aiken (Christian Harmony) styles:

\relative c' {'
  \aikenHeads
  c, d e f g2 a b1 c \break
  \aikenThinHeads

Shapes are typeset according to the step in the scale, where the base of the scale is determined by the `\key` command. When writing in a minor key, the scale step can be determined from the relative major:

```latex
\relative c' {  
  \key a \minor  
  \aikenHeads  
  a b c d e2 f g1 a \break  
  \aikenHeadsMinor  
  a,4 b c d e2 f g1 a \break  
  \aikenThinHeadsMinor  
  a,4 b c d e2 f g1 a \break  
  \sacredHarpHeadsMinor  
  a,2 b c d \break  
  \southernHarmonyHeadsMinor  
  a2 b c d \break  
  \funkHeadsMinor  
  a2 b c d \break  
  \walkerHeadsMinor  
  a2 b c d \break  
} 
```
Predefined commands
\aikenHeads, \aikenHeadsMinor, \aikenThinHeads, \aikenThinHeadsMinor, \funkHeads, \funkHeadsMinor, \sacredHarpHeads, \sacredHarpHeadsMinor, \southernHarmonyHeads, \southernHarmonyHeadsMinor, \walkerHeads, \walkerHeadsMinor.

Selected Snippets

**Aiken head thin variant noteheads**
Aiken head white notes get harder to read at smaller staff sizes, especially with ledger lines. Losing interior white space makes them appear as quarter notes.

\score {} {
  \aikenHeads
  c''2 a' c' a

  \set shapeNoteStyles = ##(doThin reThin miThin
  faThin sol laThin tiThin)
  c'' a' c' a
}
Direction of merged ‘fa’ shape note heads

Using property NoteCollision.fa-merge-direction, the direction of ‘fa’ shape note heads (‘fa’, ‘faThin’, etc.) can be controlled independently of the stem direction if two voices with the same pitch and different stem directions are merged. If this property is not set, the ‘down’ glyph variant is used.

```
{ \clef bass

<< { \aikenHeads
  f2
  \override Staff.NoteCollision.fa-merge-direction = #UP
  f2 }
\
  { \aikenHeads
    f2
    f2 }

>> }
```

![Noteheads](noteheads.png)

Applying note head styles depending on the step of the scale

The shapeNoteStyles property can be used to define various note head styles for each step of the scale (as set by the key signature or the tonic property).

This property requires a set of symbols, which can be purely arbitrary (geometrical expressions such as triangle, cross, and xcircle are allowed) or based on old American engraving tradition (some latin note names are also allowed).

That said, to imitate old American song books, there are several predefined note head styles available through shortcut commands such as \aikenHeads or \sacredHarpHeads.

This example shows different ways to obtain shape note heads, and demonstrates the ability to transpose a melody without losing the correspondence between harmonic functions and note head styles.

```
fragment = {
  \key c \major
  c2 d
e2 f
g2 a
b2 c
}

\new Staff {
  \transpose c d
  \relative c' {
    \set shapeNoteStyles = \#(do re mi fa
               #f la ti)

    \fragment
  }

  \break
```
Chapter 1: Musical notation

\relative c' {
  \set shapeNoteStyles = ##(cross triangle fa #f mensural xcircle diamond)
  \fragment
}

To see all note head styles, see Section A.9 [Note head styles], page 749.

Improvisation
Improvisation is sometimes denoted with slashed note heads, where the performer may choose any pitch but should play the specified rhythm. Such note heads can be created:

\new Voice \with {\consists Pitch_squash_engraver}
\relative {e''8 e g a a16( bes) a8 g \improvisationOn \improvisationOff a16( bes) a8 g e}

Predefined commands
\improvisationOn, \improvisationOff.

1.2 Rhythms

This section discusses rhythms, rests, durations, beaming and bars.

1.2.1 Writing rhythms

Durations

The durations of notes are entered using numbers and dots. The number entered is based on the reciprocal value of the length of the note. For example, a quarter note is designated using the numerical value of 4 as it is a 1/4 note, a half note using 2, an eighth using 8 and so on. Durations as short as 1024 notes can be entered but shorter values, while possible, can only be entered as beamed notes. Also see Section 1.2.4 [Beams], page 91.

For notes longer than a whole use the \longa – double breve – and \breve commands. A note with the duration of a quadruple breve is possible using the \maxima command but is only supported within ancient music notation. See Section 2.9 [Ancient notation], page 491.

\relative { 
\time 8/1
Here are the same durations with automatic beaming turned off.

\relative { 
  \time 8/1
  \autoBeamOff
  c'' \longa c \breve c 1 2
  c4 c8 c16 c32 c64 c128 c128
}\]

Isolated durations – durations without a pitch – that occur within a music sequence will take their pitch from the preceding note or chord.

\relative { 
  \time 8/1
  c'' \longa \breve 1 2
  4 8 16 32 64 128 128
}\]

Isolated pitches – pitches without a duration – that occur within a music sequence will take their duration from the preceding note or chord. If there is no preceding duration, then default for the note is always 4, a quarter note.

\relative { a' a a2 a a4 a a1 a }

Place a dot (.) after the duration to obtain ‘dotted’ note lengths. Double-dotted notes are specified by appending two dots, and so on.

\relative { a'4 b c4. b8 a4. b4.. c8. }

To avoid clashing with staff lines, dots on notes are normally moved up. In polyphonic situations however, they can be placed, manually, above or below the staff as required. See Section 5.4.1 [Direction and placement], page 690.
Some note durations cannot be represented using just numbers and dots but only by tying two or more notes together. See [Ties], page 58.

To specify durations that align the syllables of lyrics and notes together see Section 2.1 [Vocal music], page 311.

Notes can also be spaced proportionately to their duration, see Section 4.5.6 [Proportional notation], page 645.

Predefined commands
\autoBeamOn, \autoBeamOff, \dotsUp, \dotsDown, \dotsNeutral.

Selected Snippets

Alternative breve notes
Breve notes are also available with two vertical lines on each side of the notehead instead of one line and in baroque style.

\relative c' {  
\time 4/2  
c\breve |  
\override Staff.NoteHead.style = #'altdefault  
b\breve  
\override Staff.NoteHead.style = #'baroque  
b\breve  
\revert Staff.NoteHead.style  
a\breve
}

Changing the number of augmentation dots per note
The number of augmentation dots on a single note can be changed independently of the dots placed after the note.

\relative c' {  
c4.. a16 r2 |  
\override Dots.dot-count = #4  
c4.. a16 r2 |  
\override Dots.dot-count = #0  
c4.. a16 r2 |  
\revert Dots.dot-count  
c4.. a16 r2 |
}

Known issues and warnings

While there is no fundamental limit to rest durations (longest or shortest), there is a limit to the number of glyphs possible so only rests between \maxima may be printed.

Tuplets

Tuplets are made from a music expression with the \tuplet command, multiplying the speed of the music expression by a fraction:

\tuplet fraction \{ music \}

The fraction’s numerator will be printed over or under the notes, optionally with a bracket. The most common tuplets are triplets (3 notes played within the duration normally allowed for 2).

\relative {
  a'2 \tuplet 3/2 \{ b4 4 4 \}
  c4 c \tuplet 3/2 \{ b4 a g \}
}

\tuplet 3\noteheads.s2

When entering long passages of tuplets, having to write a separate \tuplet command for each group is inconvenient. It is possible to specify the duration of one tuplet group directly before the music in order to have the tuplets grouped automatically:

\relative {
  g'2 r8 \tuplet 3/2 8 \{ cis16 d e e f g g f e \}
}

\tuplet 8\noteheads.s2

Tuplet brackets may be manually placed above or below the staff:

\relative {
  \tupletUp \tuplet 3/2 \{ c'8 d e \}
  \tupletNeutral \tuplet 3/2 \{ c8 d e \}
  \tupletDown \tuplet 3/2 \{ f,8 g a \}
  \tupletNeutral \tuplet 3/2 \{ f8 g a \}
}

\tupletUp 3\noteheads.s2
\tupletNeutral 3\noteheads.s2
\tupletDown 3\noteheads.s2
Tuplets may be nested:

\relative {\autoBeamOff
  c''4 \tuplet 5/4 { f8 e f \tuplet 3/2 { e[ f g] } } f4}

\[\text{\begin{figure}[h!]
\begin{center}
\includegraphics[width=\textwidth]{example.png}
\end{center}
\end{figure}}\]

Modifying nested tuplets which begin at the same musical moment must be done with \tweak; see Section 5.3.4 [The \tweak command], page 681.

Tuplet brackets may be replaced with slurs, as is preferred in many older editions:

\relative {\override TupletBracket.tuplet-slur = ##t
  c'4 e8 d4 f8
  \override TupletBracket.bracket-visibility = ##t
  e f g f e d
} c1

\[\text{\begin{figure}[h!]
\begin{center}
\includegraphics[width=\textwidth]{example.png}
\end{center}
\end{figure}}\]

By default, a bracket is only printed if all of the notes it spans are not beamed together; in some cases (for example with slurs, as in the example above) it may be preferable to change that behavior, through the bracket-visibility property as detailed in one of the following snippets.

More generally, either or both the TupletBracket and TupletNumber objects may be hidden or shown as explained in Section 5.4.7 [Visibility of objects], page 700; however, a more flexible way of modifying the duration of notes without printing a tuplet bracket is also introduced in [Scaling durations], page 56.

Predefined commands
\tupletUp, \tupletDown, \tupletNeutral.

Selected Snippets

\textbf{Entering several tuplets using only one \tuplet command}

The property \texttt{tupletSpannerDuration} sets how long each of the tuplets contained within the brackets after \texttt{\tuplet} should last. Many consecutive tuplets can then be placed within a single \texttt{\tuplet} expression, thus saving typing.

There are several ways to set \texttt{tupletSpannerDuration}. The command \texttt{\tupletSpan} sets it to a given duration, and clears it when instead of a duration \texttt{\default} is specified. Another way is to use an optional argument with \texttt{\tuplet}.

\[\text{\begin{figure}[h!]
\begin{center}
\includegraphics[width=\textwidth]{example.png}
\end{center}
\end{figure}}\]

\relative c' {\time 2/4 \tupletSpan 4 \tuplet 3/2 { c8"\tupletSpan 4" c c c c c }}
Changing the tuplet number

By default, only the numerator of the tuplet number is printed over the tuplet bracket, i.e., the numerator of the argument to the \tuplet command.

Alternatively, $num:den$ of the tuplet number may be printed, or the tuplet number may be suppressed altogether.

Non-default tuplet numbers

LilyPond also provides formatting functions to print tuplet numbers different than the actual fraction, as well as to append a note value to the tuplet number or tuple fraction.
Controlling tuplet bracket visibility

The default behavior of tuplet bracket visibility is to print a bracket unless there is a beam of the same length as the tuplet.

To control the visibility of tuplet brackets, set the property `bracket-visibility` to either 
#t (always print a bracket), `if-no-beam` (only print a bracket if there is no beam), or 
#f (never print a bracket). The latter is in fact equivalent to omitting the TupletBracket object altogether from the printed output.

```music
\new Voice { 
    \relative c' { 
        \override Score.TextMark.non-musical = ##f 
        \textMark "default" \music 
        \override TupletBracket.bracket-visibility = #'if-no-beam 
        \textMark \markup \typewriter "'if-no-beam" \music 
        \override TupletBracket.bracket-visibility = ##t 
        \textMark \markup \typewriter "#t" \music 
        \override TupletBracket.bracket-visibility = ##f 
        \textMark \markup \typewriter "#f" \music 
        \omit TupletBracket 
        \textMark \markup \typewriter "omit" \music 
    }
}
```
Printing tuplet brackets on the note head side

Whichever option you choose for controlling the tuplet bracket visibility, it will show or hide the tuplet bracket irrespectively of tuplet bracket placement (stem side or note head side). However, when placing the tuplet bracket on the note head side some authors recommend always printing the tuplet bracket. The option `visible-over-note-heads` can be used to achieve this.

```
music = \relative c'' {
    \tupletNeutral \tuplet 3/2 { c16[ d e } f8]
    \tupletUp \tuplet 3/2 { c8 d e }
}\n
\new Voice {
    \relative c' {
        \time 2/4
        \override TupletBracket.visible-over-note-heads = ##t
        \override Score.TextMark.non-musical = ##f
        \textMark \markup "default" \music 
        \override TupletBracket.bracket-visibility = #'if-no-beam
        \textMark \markup \typewriter "'if-no-beam" \music 
    }
}
```

Permitting line breaks within beamed tuplets

This artificial example shows how both manual and automatic line breaks may be permitted to within a beamed tuplet. Note that such off-beat tuplets have to be beamed manually.

```
\layout {
```
\context { 
  \Voice
  \permil { Permit line breaks within tuplets
  \remove {Forbid_line_break_engraver
  \percent { Allow beams to be broken at line breaks
  \override Beam.breakable = ##t
  
  \end

  \relative c'' {
    a8
    \repeat unfold 5 { \tuplet 3/2 { c[ b a ] } }
    \percent { Insert a manual line break within a tuplet
    \tuplet 3/2 { c[ b \bar {"} \break a ] }
    \repeat unfold 5 { \tuplet 3/2 { c[ b a ] } }
    c8
  }

  \relative 
  \g clef 
  \tuplet 3/2
  \clef 
  \flags
  \times 

  See also
  Notation Reference: Section 5.4.1 [Direction and placement], page 690, Section 5.4.7 [Visibility of objects], page 700, [Time administration], page 136, [Scaling durations], page 56, Section 5.3.4 [The \tweak command], page 681, [Polymetric notation], page 83.
  Snippets: Section “Rhythms” in Snippets.

  Scaling durations
  The duration of single notes, rests or chords may be multiplied by a fraction \( N/M \) by appending \(*N/M\) (or \(*N\) if \( M \) is 1) to the duration. Factors may also be added by using Scheme expressions evaluating to a number or musical length like \(*\#(\text{ly: music-length music}).\) This is convenient for scaling a duration of ‘\(1\)’ to let a note or multi-measure rest stretch to a length derived from a music variable.

  Adding a factor will not affect the appearance of the notes or rests produced, but the altered duration will be used in calculating the position within the measure and setting the duration in the MIDI output. Multiplying factors may be combined like \(*L\)*\(M/N\). Factors are part of the duration: if a duration is not specified for subsequent notes, the default duration taken from the preceding note will include any scaling factor.

  In the following example, the first three notes take up exactly two beats, but no triplet bracket is printed.

  \relative { 

  }
Chapter 1: Musical notation

\time 2/4
% Alter durations to triplets
a'4*2/3 gis a
% Normal durations
a4 a
% Double the duration of chord
<a d>4*2
% Duration of quarter, appears like sixteenth
b16*4 c4
}

The duration of spacer rests may also be modified by a multiplier. This is useful for skipping many measures, e.g., s1*23.

Longer stretches of music may be compressed by a fraction in the same way, as if every note, chord or rest had the fraction as a multiplier. This leaves the appearance of the music unchanged but the internal duration of the notes will be multiplied by the given scale factor, usually num/den. Here is an example showing how music can be compressed and expanded:

\relative {
\time 2/4
% Normal durations
<\a' c>4 c8 a
% Scale music by *2/3
\scaleDurations 2/3 {
  <c a f>4. c8 a f
}
% Scale music by *2
\scaleDurations 2 {
  <\c' a>4 c8 b
}
}

One application of this command is in polymetric notation, see [Polymetric notation], page 83.

See also
Notation Reference: [Tuplets], page 51, [Invisible rests], page 63, [Polymetric notation], page 83.

Snippets: Section “Rhythms” in Snippets.

Known issues and warnings
The calculation of the position within a measure must take into account all the scaling factors applied to the notes within that measure and any fractional carry-out from earlier measures. This calculation is carried out using rational numbers. If an intermediate numerator or denominator in that calculation exceeds 2\(^30\) the execution and typesetting will stop at that point without indicating an error.
Ties
A tie connects two adjacent note heads of the same pitch. The tie in effect extends the duration of a note.

Ties that connect notes to nothing are called *laissez vibrer* articulation; see [Ties], page 59, for the `\laissezVibrer` command. Ties that connect nothing to notes (as needed in seconda volta sections, for example), can be entered with the `\repeatTie` command; see [Ties], page 59.

Note: Ties should not be confused with *slurs*, which indicate articulation, or *phrasing slurs*, which indicate musical phrasing. A tie is just a way of extending a note duration, similar to the augmentation dot.

A tie is entered by appending a tilde symbol (~) to the first of each pair of notes being tied. This indicates that the note should be tied to the following note, which must be at the same pitch.

\[
\{ a'2- 4^- 16 r r8 \}
\]

Ties can make use of the ‘last explicit pitch’ interpretation of isolated durations:

\[
\{ a'2^- 4^- 16 r r8 \}
\]

Ties are used either when the note crosses a bar line, or when dots cannot be used to denote the rhythm. Ties should also be used when note values cross larger subdivisions of the measure:

\[
\relative \{ \\
  r8 c'4^- 4 r4 | \\
  r8^-"not" c2^- 8 r4 \\
\}
\]

If you need to tie many notes across bar lines, it may be easier to use automatic note splitting, see [Automatic note splitting], page 87. This mechanism automatically splits long notes, and ties them across bar lines.

When a tie is applied to a chord, all note heads whose pitches match are connected. When no note heads match, no ties will be created. Chords may be partially tied by placing the ties inside the chord.

\[
\relative c' \{ \\
  <c e g>2^- 2 | \\
  <c e g>4^- <c e g c> \\
  <c e g b> <c e g b> | \\
\}
\]
When a tie continues into alternative endings, you have to specify the repeated tie as follows:

\begin{verbatim}
\relative { 
  \repeat volta 2 { c'' g <c e>2~ } 
  \alternative { 
    % the following note is tied normally 
    \volta 1 { <c e>2. r4 } 
    % the following note has a repeated tie 
    \volta 2 { <c e>2\repeatTie d4 c } 
  } 
\end{verbatim}

L.v. ties (laissez vibrer) indicate that notes must not be damped at the end. It is used in notation for piano, harp and other string and percussion instruments. They can be entered as follows:

\begin{verbatim}
<c' f' g'>1\laissezVibrer
\end{verbatim}

Ties may be made to curve up or down manually; see Section 5.4.1 [Direction and placement], page 690.

Ties may be made dashed, dotted, or a combination of solid and dashed.

\begin{verbatim}
\relative c' { 
  \tieDotted c2~ 2 
  \tieDashed c2~ 2 
  \tieHalfDashed c2~ 2 
  \tieHalfSolid c2~ 2 
  \tieSolid c2~ 2 
}\end{verbatim}

Custom dash patterns can be specified:

\begin{verbatim}
\relative c' { 
  \tieDashPattern #0.3 #0.75
\end{verbatim}
Dash pattern definitions for ties have the same structure as dash pattern definitions for slurs. For more information about complex dash patterns, see [Slurs], page 150.

Override whiteout and layer layout properties of objects that should cause a gap in ties.

```
\relative c' {
  \set tieWaitForNote = ##t
  \grace \c16 [ - e - g ] ~ \langle c, e g\rangle
  \repeat tremolo 8 \c32 - c' ~ \langle c c', \rangle
  e8 - c - a - f ~ \langle e' c a f\rangle
  \tieUp c8 - a
  \tieDown
  \tieDotted
  g8 - c g2
}
```

**Selected Snippets**

**Using ties with arpeggios**

Ties are sometimes used to write out arpeggios. In this case, two tied notes need not be consecutive. This can be achieved by setting the tieWaitForNote property to #t. The same feature is also useful, for example, to tie a tremolo to a chord, but in principle, it can also be used for ordinary consecutive notes.
Engraving ties manually

Ties may be engraved manually by changing the \texttt{tie-configuration} property of the \texttt{TieColumn} object. The first number indicates the distance from the center of the staff in half staff-spaces, and the second number indicates the direction (1 = up, -1 = down).

Note that LilyPond makes a distinction between exact and inexact values for the first number. If using an exact value (i.e., either an integer or a fraction like \(4/5\)), the value serves as a rough vertical position that gets further tuned by LilyPond to make the tie avoid staff lines. If using an inexact value like a floating point number, it is taken as the vertical position without further adjustments.

\begin{verbatim}
\relative c' {
    <c e g>2- <c e g>
\override TieColumn.tie-configuration = #'((0.0 . 1) (-2.0 . 1) (-4.0 . 1))
    <c e g>2- <c e g>
\override TieColumn.tie-configuration = #'((0 . 1) (-2 . 1) (-4 . 1))
    <c e g>2- <c e g>
}
\end{verbatim}

See also

Notation Reference: [Slurs], page 150, [Automatic note splitting], page 87.

Snippets: Section “Expressive marks” in Snippets, Section “Rhythms” in Snippets.

Known issues and warnings

Switching staves when a tie is active will not produce a slanted tie.

Changing clefs or ottavations during a tie is not really well-defined. In these cases, a slur may be preferable.

1.2.2 Writing rests

Rests are entered as part of the music in music expressions.

Rests

Rests are entered like notes with the note name \(r\). Durations longer than a whole rest use the following predefined commands:

\begin{verbatim}
\new Staff {
    % These two lines are just to prettify this example
    \time 16/1
\end{verbatim}
\omit Staff.TimeSignature
% Print a maxima rest, equal to four breves
r\maxima
% Print a longa rest, equal to two breves
r\longa
% Print a breve rest
r\breve
r1 r2 r4 r8 r16 r32 r64 r128
}

Whole measure rests, centered in the middle of the measure, must be entered as multi-measure rests. They can be used for a single measure as well as many measures and are discussed in [Full measure rests], page 66.

To explicitly specify a rest’s vertical position, write a note followed by \rest. A rest of the duration of the note will be placed at the staff position where the note would appear. This allows for precise manual formatting of polyphonic music, since the automatic rest collision formatter will not move these rests.

\relative { a'4\rest d4}\rest

Selected Snippets

Rest styles
Rests may be used in various styles.

\new Staff \relative c {
\omit Score.TimeSignature
\cadenzaOn

\override Staff.Rest.style = #'mensural
r\maxima\markup \typewriter { mensural }
r\longa r\breve r1 r2 r4 r8 r16 s32 s64 s128 s128
\bar ""
\break

\override Staff.Rest.style = #'neomensural
r\maxima\markup \typewriter { neomensural }
r\longa r\breve r1 r2 r4 r8 r16 s32 s64 s128 s128
\bar ""
\break

\override Staff.Rest.style = #'classical
r\maxima\markup \typewriter { classical }
r\longa r\breve r1 r2 r4 r8 r16 r32 r64 r128 s128
\bar ""
\break
\override Staff.Rest.style = #'z
r\maxima\markup \typewriter { z-style }
r\longa r\breve r1 r2 r4 r8 r16 r32 r64 r128 s128
\bar ""
\break

\override Staff.Rest.style = #'default
r\maxima\markup \typewriter { default }
r\longa r\breve r1 r2 r4 r8 r16 r32 r64 r128 s128
}

\relative c'' {
  c4 c s c |
  s2 c |
}

See also

Notation Reference: [Full measure rests], page 66.

Snippets: Section “Rhythms” in Snippets.

Internals Reference: Section “Rest” in Internals Reference.

Known issues and warnings
There is no fundamental limit to rest durations (both in terms of longest and shortest), but the number of glyphs is limited: there are rests from 1024th to maxima (8\times whole).

Invisible rests
There are two forms of invisible rests: the spacer rest named ‘s’, and the \skip command. The spacer rest is a note that does not produce output. Like any other note or rest, its duration sets the default duration of following notes.
Chapter 1: Musical notation

Also like other notes and rests, it implicitly causes Staff and Voice contexts to be created if none exist.

\{ s1 s s \}

Spacer rests are available only in note mode and chord mode. In other situations, for example, when entering lyrics, the command \skip is used to skip a musical moment. The \skip command accepts either an explicit duration or a piece of music as an argument and skips the duration of the argument. The duration of the \skip is ignored if lyrics derive their durations from the notes in an associated melody through \addlyrics or \lyricsto.

<<
\{ a'2 \skip2 a'2 a'2 \}
\new Lyrics { 
  \lyricmode {
    foo2 \skip1 bla2
  }
}
>>

foo    bla

When the argument to \skip is music, the default duration of the following note is implicitly set by the last note of the argument. However, to preserve backward compatibility with the legacy implementation of \skip, a numeric duration argument does not affect the duration of the subsequent note.

<<
\{ 
  \repeat unfold 12 { a'4 } 
} 
{ 
  a'4 \skip2 a' | 
  a'4 \skip { a'8 a' a' a' } a' a' | 
  s2 a' 
} 
>>
The \skip command preserves the effect of an enclosing unfoldRepeats command, unlike the skip-of-length Scheme function.

\[
\text{MyCadenza} = \text{\fixed c'} \{ \\
\text{\repeat volta 2} \{ \\
\text{d8 e f g g4 f4} \\
\} \\
\}\]

\[
\text{music} = \langle< \\
\text{\new Staff} \{ \\
\text{\MyCadenza} \\
\text{c'1} \\
\} \\
\text{\new Staff} \{ \\
\text{#(skip-of-length MyCadenza)} \\
\text{c'1} \\
\} \\
\text{\new Staff} \{ \\
\text{\skip \MyCadenza} \\
\text{c'1} \\
\} \\
\rangle>
\]

\text{\unfoldRepeats \music}

The \skip command simply skips musical time; it creates no output of any kind.

\[
\%	ext{This is valid input, but does nothing} \\
\{ \text{\skip 1 \skip1 \skip 1} \}
\]

See also

Notation Reference: [Hidden notes], page 257, Section 5.4.7 [Visibility of objects], page 700.
Snippets: Section “Rhythms” in Snippets.
Internals Reference: Section “SkipMusic” in Internals Reference.

Known issues and warnings

Because duration and music arguments to the \skip command affect the duration of subsequent music differently, it is good practice to provide an explicit duration for the music immediately following the command.
Full measure rests

Rests for one or more full measures are entered like notes with the note name uppercase ‘R’. Their duration is entered identically to the duration notation used for notes, including the ability to use duration multipliers, as explained in [Scaling durations], page 56:

```
\compressMMRests {
R1*4
R1*24
R1*4
b'2"Tutti" b'4 a'4
}
```

The example above also demonstrates how to compress multiple empty measures, as explained in [Compressing empty measures], page 246.

The duration of a multi-measure rest must always be equal to the length of one or several measures. Therefore, some time signatures require the use of augmentation dots or fractions:

```
\compressMMRests {
\time 2/4
R1
\time 3/4
R2. | R2.*2 |
\time 13/8
R1*13/8 | R1*13/8*12 |
\time 10/8
R4*5*4 |
}
```

A full-measure rest is printed as either a whole or breve rest, centered in the measure, depending on the time signature.

```
\time 4/4
R1
\time 6/4
R1*3/2 |
\time 8/4
R1*2 |
```
Markups can be added to multi-measure rests.

\compressMMRests { 
\time 3/4
R2.*10\markup { \italic "ad lib." } }

\begin{music}
\f clefs.G \\
\times \\times \\times \\
\fermata
\end{music}

\textbf{Note:} Markups and articulations attached to multi-measure rests are MultiMeasureRestText and MultiMeasureRestScript types, not TextScript and Script. Overrides must be directed to the correct object, or they will be ignored. See the following example:

% This fails, as the wrong object name is specified
\override TextScript.padding = #5
\override Script.color = #blue
R1"wrong"
R1\fermata

% This is the correct object name to be specified
\override MultiMeasureRestText.padding = #5
\override MultiMeasureRestScript.color = #blue
R1"right"
R1\fermata

\begin{music}
\f clefs.G \\
\begin{align}
\compressEmptyMeasures R1*2 R1*4 R1*64 R1*16 \\
\override Staff.MultiMeasureRest.space-increment = 2.5 \\
R1*2 R1*4 R1*64 R1*16 \\
\end{align}
\end{music}

When a multi-measure rest immediately follows a \partial setting, resulting bar-check warnings may not be displayed.

\textbf{Predefined commands}
\texttt{\textLengthOn, \textLengthOff, \compressMMRests}.

\textbf{Selected Snippets}

\textit{Multi-measure rest length control}

Multi-measure rests have length according to their total duration which is under the control of MultiMeasureRest.space-increment. Note that the default value is 2.0.

\begin{music}
\relative c' { 
\compressEmptyMeasures R1*2 R1*4 R1*64 R1*16 \\
\override Staff.MultiMeasureRest.space-increment = 2.5 \\
R1*2 R1*4 R1*64 R1*16 \\
}
**Positioning multi-measure rests**

Unlike ordinary rests, there is no predefined command to change the staff position of a multi-measure rest symbol of either form by attaching it to a note. However, in polyphonic music multi-measure rests in odd-numbered and even-numbered voices are vertically separated.

The positioning of multi-measure rests can be controlled as follows:

```latex
\relative c' 
\override MultiMeasureRest.staff-position = #-2 
\override MultiMeasureRest.staff-position = #0 
\override MultiMeasureRest.staff-position = #2 
\override MultiMeasureRest.staff-position = #3 
\override MultiMeasureRest.staff-position = #6 
\revert MultiMeasureRest.staff-position 
\break
```

% In two Voices, odd-numbered voices are under the top line
<< { R1 } \ { a1 } >>
% Even-numbered voices are under the bottom line
<< { a1 } \ { R1 } >>
% Multi-measure rests in both voices remain separate
<< { R1 } \ { R1 } >>

% Separating multi-measure rests in more than two voices
% requires an override
<< { R1 } \ { R1 } \ 
  \once \override MultiMeasureRest.staff-position = #0 
  \ { R1 } >>

% Using compressed bars in multiple voices requires another override
% in all voices to avoid multiple instances being printed
compressMMReests
<< 
\revert MultiMeasureRest.direction 
\ { R1\*3 } \ 
\ 
```
Multi-measure rest markup

Markups attached to a multi-measure rest will be centered above or below it. Long markups attached to multi-measure rests do not cause the measure to expand. To expand a multi-measure rest to fit the markup, use an empty chord with an attached markup before the multi-measure rest. Text attached to a spacer rest in this way is left-aligned to the position where the note would be placed in the measure, but if the measure length is determined by the length of the text, the text will appear to be centered.

\relative c' {  
\compressMMRests {  
\textLengthOn  
<> \markup { [MAJOR GENERAL] }  
R1*19  
<> \markup { \italic { Cue: ... it is yours } }  
<> \markup { A }  
R1*30\markup { [MABEL] }  
\textLengthOff  
c4\markup { CHORUS } d f c  
}  
}  

[MAJOR GENERAL] 19  
[MAJOR GENERAL] 19  
A 30  
A 30  
CHORUS  
CHORUS  

Cue: ... it is yours  
Cue: ... it is yours

Internals Reference: Section “MultiMeasureRest” in Internals Reference, Section “MultiMeasureRestNumber” in Internals Reference, Section “MultiMeasureRestScript” in Internals Reference, Section “MultiMeasureRestText” in Internals Reference.

Known issues and warnings

Fingerings over multi-measure rests (e.g., R1*10-4) may result in the fingering numeral colliding with the bar counter numeral.
There is no way to automatically condense multiple ordinary rests into a single multi-measure rest.

Multi-measure rests do not take part in rest collisions.

**Caesuras**

The \caesura command calls for unmetered silence: typically, a short break in sound that does not shorten the previous note.

\fixed c'\' \{ c2. \caesura d4 \}

\begin{figure}
\includegraphics[width=0.5\textwidth]{caesura}
\end{figure}

In chants and hymns, \caesura can serve more generally as a phrase division; for more information, see the references at the end of this section. For a break in sound that shortens the previous note, see [Breath marks], page 154.

Articulations may follow \caesura to indicate the relative duration or significance of the break; these create CaesuraScript grobs.

\fixed c'\' \{ c2. \caesura \fermata \d4 \}

\begin{figure}
\includegraphics[width=0.5\textwidth]{caesura_fermata}
\end{figure}

By default, \caesura creates a BreathingSign grob. The breath element of the caesuraType context property controls which of several predefined signs \caesura creates. See Section A.16 [List of breath marks], page 822.

\fixed c'\' \{
\set Score.caesuraType = #'((breath . curvedcaesura))
c2. \caesura d4
\}

To designate one or more CaesuraScript grobs to be created as a normal part of an unarticulated caesura, set the scripts element of the caesuraType context property. (Additional scripts can still be attached as articulations.) In conjunction with the breath element, the scripts listed in the script element attach to the BreathingSign; otherwise, if a BarLine is present, they attach to it.

The caesuraTypeTransform context property can be set to a Scheme function to enable a degree of automatic adaptation. The at-bar-line-substitute-caesura-type function generator supports styles where the notation differs at a bar line.

\fixed c' \{
\set Score.caesuraType =
#'( (breath . spacer)
  (scripts . (outsidecomma)))
\set Score.caesuraTypeTransform =
#( at-bar-line-substitute-caesura-type
  '( (scripts . (fermata))))
c'\d4
Predefined commands
\caesura.

Selected Snippets

**Positioning opposing fermatas on a bar line**
This snippet demonstrates a command that prints fermatas both above and below a bar line. If there would not otherwise be a bar line, it adds a double bar line. Semantically, the command codes a longer-than-normal caesura, which might be considered misuse depending on the situation.

```latex
\newStaff
\twoWayFermata
```

1.2.3 Displaying rhythms

Time signature

The time signature is set as follows:

\[\text{\relative c'' { \time 2/4 c''2 \time 3/4 c''2.}}\]

Mid-measure time signature changes are covered in [Upbeats], page 80.

Time signatures are printed at the beginning of a piece and whenever the time signature changes. If a change takes place at the end of a line a warning time signature sign is printed there. This default behavior may be changed, see Section 5.4.7 [Visibility of objects], page 700.

\[\text{\relative c'' { \time 2/4 c2 \time 2/2 c c \break \time 4/4 c c c \break \time 2/2 c1 \time 4/4 c1 \relative c'' \numericTimeSignature \time 4/4 c1 \defaultTimeSignature \time 4/4 c1}}\]

The time signature symbol that is used in 2/2 and 4/4 time can be changed to a numeric style:
Mensural time signatures are covered in [Mensural time signatures], page 496.

In addition to setting the printed time signature, the \time command also sets the values of the time-signature-based properties baseMoment, beatStructure, and beamExceptions. The predefined default values for these properties can be found in scm/time-signature-settings.scm.

The default value of beatStructure can be overridden in the \time command itself by supplying it as the optional first argument:

\score { \new Staff { \relative { \time 2/2 \c1 \repeat unfold 7 \c8 | \time 3/2 \c8 | } } }  

Alternatively, the default values of all these time-signature-based variables, including baseMoment and beamExceptions, can be set together. The values can be set independently for several different time signatures. The new values take effect when a subsequent \time command with the same value of the time signature is executed:

\score { \new Staff { \relative c' { \overrideTimeSignatureSettings \time 4/4 \repeat unfold 8 \c8 | } } }  

\overrideTimeSignatureSettings takes four arguments:

1. timeSignatureFraction, a fraction describing the time signature to which these values apply.
2. `baseMomentFraction`, a fraction containing the numerator and denominator of the basic timing unit for the time signature.

3. `beatStructure`, a Scheme list indicating the structure of the beats in the measure, in units of the base moment.

4. `beamExceptions`, an alist containing any beaming rules for the time signature that go beyond ending at every beat, as described in [Setting automatic beam behavior], page 94.

Changed values of default time signature properties can be restored to the original values:

```latex
\score { 
  \relative { 
    \overrideTimeSignatureSettings 4/4 % timeSignatureFraction \new Staff { 
      \overrideTimeSignatureSettings 4/4 % timeSignatureFraction 
      \repeat unfold 8 \{ c'8 \} | 
      \ milling 
      \time 4/4 
      \repeat unfold 8 \{ c8 \} | 
      \revertTimeSignatureSettings 4/4 
      \time 4/4 
      \repeat unfold 8 \{ c8 \} | 
    } 
  } 
}
```

Different values of default time signature properties can be established for different staves by enabling polyrhythmic notation (see [Polyrhythmic notation], page 83).

```latex
\score { 
  \new StaffGroup << 
    \new Staff { 
      \overrideTimeSignatureSettings 4/4 % timeSignatureFraction 
      \new Staff { 
        \overrideTimeSignatureSettings 4/4 % timeSignatureFraction 
        \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
        \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
        \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
        \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
      } 
      \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
      \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
      \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
      \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
      \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
      \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
      \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
      \overflowTimeSignatureSettings 4/4 % timeSignatureFraction 
    } 
  } 
}
```

\layout {
A further method of changing these time-signature-related variables, which avoids reprinting the time signature at the time of the change, is shown in [Setting automatic beam behavior], page 94.

**Predefined commands**
\numericTimeSignature, \defaultTimeSignature.

**Selected Snippets**

*Time signature printing only the numerator as a number (instead of the fraction)*

Sometimes, a time signature should not print the whole fraction (for example, 7/4), but only the numerator (digit 7 in this case). This can be easily done by using \override \Staff.TimeSignature.style = #'single-digit to change the style permanently. By using \revert \Staff.TimeSignature.style, this setting can be reversed. To apply the single-digit style to only one time signature, use the \override command and prefix it with a \once.

```
\relative c' { 
  \time 3/4 
  c4 c c 
  % Change the style permanently 
  \override \Staff.TimeSignature.style = #'single-digit 
  \time 2/4 
  c4 c 
  \time 3/4 
  c4 c c 
  % Revert to default style: 
  \revert \Staff.TimeSignature.style 
  \time 2/4 
  c4 c 
  % single-digit style only for the next time signature 
  \once \override \Staff.TimeSignature.style = #'single-digit 
  \time 5/4 
  c4 c c c c 
  \time 2/4 
  c4 c 
}
```

```
\relative c' { 
  \time 3/4 
  c4 c c 
  % Change the style permanently 
  \override \Staff.TimeSignature.style = #'single-digit 
  \time 2/4 
  c4 c 
  \time 3/4 
  c4 c c 
  % Revert to default style: 
  \revert \Staff.TimeSignature.style 
  \time 2/4 
  c4 c 
  % single-digit style only for the next time signature 
  \once \override \Staff.TimeSignature.style = #'single-digit 
  \time 5/4 
  c4 c c c c 
  \time 2/4 
  c4 c 
}

Music Glossary: Section “time signature” in Music Glossary
Notation Reference: [Mensural time signatures], page 496, [Polymetric notation], page 83,
[Setting automatic beam behavior], page 94, [Time administration], page 136.
Installed Files: scm/time-signature-settings.scm.
Snippets: Section “Rhythms” in Snippets.

Known issues and warnings
\numericTimeSignature and \defaultTimeSignature have no effect when used in a MensuralStaff. To use these modern time signatures in a MensuralStaff, either select them already when creating the context:
\new MensuralStaff \with { \numericTimeSignature } { 
c'1
}
\override MensuralStaff.TimeSignature.style = #'numbered
\time 2/2
c'
\override MensuralStaff.TimeSignature.style = #'default
\time 2/2
c'

Metronome marks
A basic metronome mark is simple to write:
\relative {
\tempo 4 = 120
c'2 d
e4. d8 c2
}
\relative {
\tempo 4 = 120
c'2 d
e4. d8 c2
}

Metronome marks may also be printed as a range of two numbers:
Tempo indications with text can be used instead:

\relative {
  \tempo "Allegretto"
  c''4 e d c
  b4. a16 b c4 r4
}

\Allegretto
\(\uparrow\)

Combining a metronome mark and text will automatically place the metronome mark within parentheses:

\relative {
  \tempo "Allegro" 4 = 160
  g'4 c d e
  d4 b g2
}

\Allegro (\( \uparrow \) = 160)

In general, the text can be any markup object:

\relative {
  \tempo \markup { \italic Faster } 4 = 132
  a'8-. r8 b-. rgis-. r a-. r
}

\Faster (\( \uparrow \) = 132)

A particularly useful markup command is \rhythm, which prints a rhythmic pattern. See Section A.12.4 [Markup for music and musical symbols], page 791.

\relative {
  \tempo \markup { Swing
    \hspace #0.4
    \rhythm \{ 8[ 8 ] \} = \rhythm \{ \tuplet 3/2 \{ 4 8 \} \}
}
A parenthesized metronome mark with no textual indication may be written by including an empty string in the input:

```
\relative {
  \tempo "" 8 = 96
d''4 g e c
}
```

In a part for an instrument with long periods of rests (see [Full measure rests], page 66), tempo indications sometimes follow each other closely. The command `\markLengthOn` provides extra horizontal space to prevent tempo indications from overlapping, and `\markLengthOff` restores the default behavior of ignoring tempo marks for horizontal spacing.

```
\compressMMRests {
  \markLengthOn
  \tempo "Molto vivace"
  R1*12
  \tempo "Meno mosso"
  R1*16
  \markLengthOff
  \tempo "Tranquillo"
  R1*20
}
```

Selected Snippets

**Printing metronome and rehearsal marks below the staff**

By default, metronome and rehearsal marks are printed above the staff. To place them below the staff simply set the direction property of `MetronomeMark` or `RehearsalMark` appropriately.

```
\layout {
  indent = 0
  ragged-right = ##f
}
```

```
% Metronome marks below the staff
```
Changing the tempo without a metronome mark

To change the tempo in MIDI output without printing anything, make the metronome mark invisible.

Creating metronome marks in markup mode

New metronome marks can be created in markup mode, but they will not change the tempo in MIDI output.
For more details, see Section 1.8.2 [Formatting text], page 287.

See also

Notation Reference: Section 1.8.2 [Formatting text], page 287, Section 3.6 [Creating MIDI output], page 582, [Full measure rests], page 66.

Snippets: Section “Staff notation” in Snippets.

Internals Reference: Section “MetronomeMark” in Internals Reference.

Upbeats
Partial or pickup measures, such as an anacrusis or an upbeat, are entered using the \partial command:

\partial duration

When \partial is used at the beginning of a score, duration is the length of the music preceding the first bar.

\relative {
\time 3/4
\partial 4.
\relative {
\time 9/8
\relative {
\relative {#all-bar-numbers-visible
\override Score.BarNumber.break-visibility = #end-of-line-invisible
\time 9/8
\relative {
\time 12/8
\relative {
\relative {
c8( d) e | f2.~ 4 f8 a,( c) f |
}}
}}
}}

When \partial is used after the beginning of a score, duration is the remaining length of the current measure. It does not create a new numbered bar.
The \partial command is required when the time signature changes in mid measure, but it may also be used alone.

\relative {  
\set Score.barNumberVisibility = #all-bar-numbers-visible
\override Score.BarNumber.break-visibility = #end-of-line-invisible
\time 6/8
\partial 8
e'8 | a4 c8 b[ c b] |
\partial 4
r8 e,8 | a4 \bar "||"
\partial 4
r8 e8 | a4
c8 b[ c b] |
}

The \partial command sets the Timing.measurePosition property, which is a rational number that indicates how much of the measure has passed.

**See also**

Notation Reference: [Grace notes], page 129.

Snippets: Section “Rhythms” in *Snippets*.

Internal Reference: Section “Timing_translator” in *Internals Reference*.

**Unmetered music**

In music such as cadenzas, it may be desirable to disable automatic measure demarcation and all that it entails: numbering bars, resetting accidentals, etc. Music between \cadenzaOn and \cadenzaOff does not count toward the length of a measure.

\relative c' {  
% Show all bar numbers
\override Score.BarNumber.break-visibility = #all-visible
c4 d e d
\cadenzaOn
c4 cis d8[ d d] f4 g4.
\cadenzaOff
d4 e d c
}

To divide an unmetered passage into irregular measures, temporarily re-enable timing and use \partial to create a tiny measure. The \bar command alone does not start a new measure.

cadenzaMeasure = {
\cadenzaOff
Automatic beaming is disabled by \cadenzaOn. Therefore, all beaming in cadenzas must be entered manually. See [Manual beams], page 102.

\relative { c'4 f g c, d f g c 
\cadenzaOn
\allowBreak
d[ cis c cis] 
\allowBreak
d[ f g a]
\allowBreak
ais[ g f g]

\allowBreak
d4 f8
\allowBreak
d[ cis] c4
\allowBreak
a8[ c] g4
}

\relative <<
\new Staff {  
  \time 3/4  
  c'4 c c |  
  c4 c c | 
}
\new Staff {  
  \time 3/4  
  \set Staff.timeSignatureFraction = 9/8  
  \scaleDurations 2/3 {  
    \repeat unfold 3 { c8[ c c] }  
    \repeat unfold 3 { c4 c8 }  
  } 
}
Different time signatures with unequal-length measures

Each staff can be given its own independent time signature as soon as \enablePolymeter is placed in the \layout block.

\layout {  
  \enablePolymeter  
}

% Now each staff has its own time signature.

\relative <<  
\new Staff {  
  \time 3/4  
  c'4 c c |  
  c4 c c |  
}  
\new Staff {  
  \time 2/4  
  c4 c |  
  c4 c |  
  c4 c |  
}  
\new Staff {  
  \time 3/8  
  c4. |  
  c8 c c |  
  c4. |  
  c8 c c |  
}  

>>
To have just one polymetric score, include \enablePolymeter in a \layout block inside the \score block.

\score {
  \new Staff { c''1 1 }
  \new Staff { c'2 d' g'2~ 2 }
}

\score {
  \layout {
    \enablePolymeter
  }
  \new Staff { \time 4/4 c''1 1 }
  \new Staff { \time 2/4 c'2 d' g'2~ 2 }
}

When using polymeter, all staves should include a \time command if their meter is not the default 4/4. This is true even for special staves without actual staff lines, such as Dynamics contexts, since the placement of certain spanners like hairpins is synchronized with bar lines.
In order to use this feature with MIDI output, also include \enablePolymeter in a \midi block.

\layout {
  \enablePolymeter
}
\midi {
  \enablePolymeter
}

**Compound time signatures**

These are created using the \compoundMeter function. The syntax for this is:

\compoundMeter #'(list of lists)

The simplest construction is a single list, where the last number indicates the bottom number of the time signature and those that come before it, the top numbers.

\relative {
  \compoundMeter #'((2 2 2 8))
  \repeat unfold 6 c'8 \repeat unfold 12 c16
}

More complex meters can be constructed using additional lists. Also, automatic beaming settings will be adjusted depending on the values.

\relative {
  \compoundMeter #'((1 4) (3 8))
  \repeat unfold 5 c'8 \repeat unfold 10 c16
}

\relative {
  \compoundMeter #'((1 2 3 8) (3 4))
  \repeat unfold 12 c'8
}
Chapter 1: Musical notation

See also

Notation Reference: [Automatic beams], page 91, [Manual beams], page 102, [Time signature], page 72, [Scaling durations], page 56.

Snippets: Section “Rhythms” in Snippets.

Internals Reference: Section “TimeSignature” in Internals Reference, Section “Timing_translator” in Internals Reference, Section “Staff” in Internals Reference.

Known issues and warnings
Although notes that occur at the same moment in each of the different staves will be placed at the same horizontal location, bar lines (in each staff) may cause inconsistent spacing within each of the different time signatures.

Automatic note splitting
Long notes which overrun bar lines can be converted automatically to tied notes. This is done by replacing the Note_heads_engraver with the Completion_heads_engraver. Similarly, long rests which overrun bar lines are split automatically by replacing the Rest_engraver with the Completion_rest_engraver. In the following example, notes and rests crossing the bar lines are split, notes are also tied.

\new Voice \with {
  \remove Note_heads_engraver
  \consists Completion_heads_engraver
  \remove Rest_engraver
  \consists Completion_rest_engraver
}
\relative {
  c'2. c8 d4 e f g a b c8 c2 b4 a g16 f4 e d c8. c2 r1*2
}

These engravers split all running notes and rests at the bar line, and inserts ties for notes. One of its uses is to debug complex scores: if the measures are not entirely filled, then the ties show exactly how much each measure is off.

The property completionUnit sets a preferred duration for the split notes.

\new Voice \with {
  \remove Note_heads_engraver
  \consists Completion_heads_engraver
} \relative {
  \time 9/8 g\breve. d'4. \bar "||"
\set completionUnit = #(ly:make-moment 3 8)
g\breve. d4.
}

These engravers split notes with scaled duration, such as those in tuplets, into notes with the same scale factor as in the input note.

\new Voice \with {
   \remove Note_heads_engraver
   \consists Completion_heads_engraver
} \relative {
   \time 2/4 r4
   \tuplet 3/2 {g'4 a b}
   \scaleDurations 2/3 {g a b}
   g4*2/3 a b
   \tuplet 3/2 {g4 a b}
   r4
}

Music Glossary: Section “tie” in Music Glossary

Snippets: Section “Rhythms” in Snippets.

Internals Reference: Section “Note_heads_engraver” in Internals Reference, Section “Completion_heads_engraver” in Internals Reference, Section “Completion_rest_engraver” in Internals Reference, Section “Completion_rest_engraver” in Internals Reference.

Known issues and warnings

For consistency with previous behavior, notes and rests with duration longer than a measure, such as c1*2, are split into notes without any scale factor, \{ c1 c1 \}. The property completionFactor controls this behavior, and setting it to #f cause split notes and rests to have the scale factor of the input durations.

Showing melody rhythms

Sometimes you might want to show only the rhythm of a melody. This can be done with the rhythmic staff. All pitches of notes on such a staff are squashed, and the staff itself has a single line:

\new RhythmicStaff {\new Voice = "myRhythm" \relative {\time 4/4}
\new Lyrics {
\lyricsto "myRhythm" {
This is my song
I like to sing
}
}

\new ChordNames {
\chordmode {
  c1 f g c
}
}
\new Voice \with {
\consists Pitch_squash_engraver
} \relative c'' {
\improvisationOn
  c4 c8 c c4 c8 c
  f4 f8 f f4 f8 f
  g4 g8 g g4 g8 g
  c4 c8 c c4 c8 c
}

Music containing chords can also be used as input to RhythmicStaff and for use with the Pitch_squash_engraver if the chords are first reduced to single notes with the \reduceChords music function:

\new RhythmicStaff {
\time 4/4
\reduceChords {
  <c>2
  <e>2
  <c e g>2
  <c e g>4
  <c e g>4
}
Predefined commands
\improvisationOn, \improvisationOff, \reduceChords.

Selected Snippets

*Guitar strum rhythms*

For guitar music, it is possible to show strum rhythms, along with melody notes, chord names and fret diagrams.

\include "predefined-guitar-fretboards.ly"

\new ChordNames {

1.2.4 Beams

Automatic beams

By default, beams are inserted automatically:

\relative c' {
  \time 2/4 c8 c c c
  \time 6/8 c8 c c c8. c16 c8
}

If these automatic decisions are not satisfactory, beaming can be entered explicitly; see [Manual beams], page 102. Beams must be entered manually if beams are to be extended over rests.

If automatic beaming is not required, it may be turned off with \autoBeamOff and on with \autoBeamOn:

\relative c' {
  c4 c8 c8. c16 c8. c16 c8
  \autoBeamOff
  c4 c8 c8. c16 c8.
  \autoBeamOn
}

This is my song. I like to sing.
Note: If beams are used to indicate melismata in songs, then automatic beaming should be switched off with \autoBeamOff and the beams indicated manually. Using \partCombine with \autoBeamOff can produce unintended results. See the snippets for more information.

Beaming patterns that differ from the automatic defaults can be created; see [Setting automatic beam behavior], page 94.

Predefined commands
\autoBeamOff, \autoBeamOn.

Selected Snippets

Beams across line breaks

Line breaks are normally forbidden when beams cross bar lines. This behavior can be changed as shown:
\relative c'' {
\override Beam.breakable = ##t
\c8 c[ c] c[ c] c[ c] c[ \break \c8] c[ c] c[ c] c[ c] c
}

Changing beam knee gap

Kneed beams are inserted automatically when a large gap is detected between the note heads. This behavior can be tuned through the auto-knee-gap property. A kneed beam is drawn if the gap is larger than the value of auto-knee-gap plus the width of the beam object (which depends on the duration of the notes and the slope of the beam). By default auto-knee-gap is set to 5.5 staff spaces.
{\f8 f''8 f8 f''8
\override Beam.auto-knee-gap = #6
\f8 f''8 f8 f''8
}
Partcombine and autoBeamOff

The function of \autoBeamOff when used with \partCombine can be difficult to understand.

\set Staff.autoBeaming = ##f

instead, to ensure that autobeaming will be turned off for the entire staff.

\partCombine apparently works with 3 voices – stem up single, stem down single, stem up combined.

An \autoBeamOff call in the first argument to \partCombine will apply to the voice that is active at the time the call is processed, either stem up single or stem up combined. An \autoBeamOff call in the second argument will apply to the voice that is stem down single.

In order to use \autoBeamOff to stop all autobeaming when used with \partCombine, it will be necessary to use three calls to \autoBeamOff.

\{\set Staff.autoBeaming = ##f \% turns off all autobeaming
\partCombine
{\autoBeamOff \% applies to split up stems
\repeat unfold 4 a'16
\autoBeamOff \% applies to combined up stems
\repeat unfold 4 a'8
\repeat unfold 4 a'16}
\autoBeamOff \% applies to down stems
\repeat unfold 4 f'8
\repeat unfold 8 f'16 |}
\}

Installed Files: scm/auto-beam.scm.

Snippets: Section “Rhythms” in Snippets.

Known issues and warnings

The properties of a beam are determined at the start of its construction and any additional beam property changes that occur before the beam has been completed will not take effect until the next, new beam starts.
Setting automatic beam behavior

When automatic beaming is enabled, the placement of automatic beams is determined by three context properties: baseMoment, beatStructure, and beamExceptions. The default values of these variables may be overridden as described below, or alternatively the default values themselves may be changed as explained in [Time signature], page 72.

If a beamExceptions rule is defined for the time signature in force, that rule alone is used to determine the beam placement; the values of baseMoment and beatStructure are ignored.

If no beamExceptions rule is defined for the time signature in force, the beam placement is determined by the values of baseMoment and beatStructure.

Beaming based on baseMoment and beatStructure

By default, beamExceptions rules are defined for most common time signatures, so the beamExceptions rules must be disabled if automatic beaming is to be based on baseMoment and beatStructure. The beamExceptions rules are disabled by

\set Timing.beamExceptions = #'()

When beamExceptions is set to #'(), either due to an explicit setting or because no beamExceptions rules are defined internally for the time signature in force, the ending points for beams are on beats as specified by the context properties baseMoment and beatStructure. beatStructure is a scheme list that defines the length of each beat in the measure in units of baseMoment. By default, baseMoment is one over the denominator of the time signature. By default, each unit of length baseMoment is a single beat.

Note that there are separate beatStructure and baseMoment values for each time signature. Changes to these variables apply only to the time signature that is currently in force, hence those changes must be placed after the \time command which starts a new time signature section, not before it. New values given to a particular time signature are retained and reinstated whenever that time signature is reestablished.

\relative c' {  
\time 5/16  
c16"default" c c c c  
% beamExceptions are unlikely to be defined for 5/16 time,  
% but let's disable them anyway to be sure  
\set Timing.beamExceptions = #'()  
\set Timing.beatStructure = 2,3  
c16"(2+3)" c c c c  
\set Timing.beatStructure = 3,2  
c16"(3+2)" c c c c  
}

\relative {    
\time 4/4  
a'8"default" a a a a a a  
% Disable beamExceptions because they are definitely  
% defined for 4/4 time  
\set Timing.beamExceptions = #'()  
\set Timing.baseMoment = #(ly:make-moment 1/4)  
\set Timing.beatStructure = 1,1,1,1  
a8"changed" a a a a a a
Beam setting changes can be limited to specific contexts. If no setting is included in a lower-level context, the setting of the enclosing context will apply.

\new Staff {
    \time 7/8
    \set Staff.beatStructure = 2,3,2
    \new Voice = one {
        \relative {
            a'8 a a a a a
        }
    }
    \new Voice = two {
        \relative {
            \voiceTwo
            \set Voice.beatStructure = 1,3,3
            f'8 f f f f f
        }
    }
}\new Staff {
    \time 7/8
    \set beatStructure = 3,1,1,2
    \relative {a'8 a a a16 a a a8 a} \relative {f'4. f8 f f f}
}\set Staff.beatStructure = 3,1,1,2
\relative {a'8 a a a16 a a a8 a} \relative {f'4. f8 f f f}
The value of `baseMoment` can be adjusted to change the beaming behavior, if desired. When this is done, the value of `beatStructure` must be set to be compatible with the new value of `baseMoment`.

```latex
\texttt{time} 5/8
% No need to disable beamExceptions
% as they are not defined for 5/8 time
\set \texttt{Timing.baseMoment} = \#(\texttt{ly:make-moment} 1/16)
\set \texttt{Timing.beatStructure} = 7,3
\repeat unfold 10 \{ a'16 \}
```

`baseMoment` is a *moment*; a unit of musical duration. A quantity of type ‘moment’ is created by the Scheme function `ly:make-moment`. For more information about this function, see [Time administration], page 136.

By default `baseMoment` is set to one over the denominator of the time signature. Any exceptions to this default can be found in `scm/time-signature-settings.scm`.

**Beaming based on beamExceptions**

Special autobeaming rules (other than ending a beam on a beat) are defined in the `beamExceptions` property.

The value for `beamExceptions`, a somewhat complex Scheme data structure, is easiest generated with the `\beamExceptions` function. This function is given one or more manually beamed measure-long rhythmic patterns (measures have to be separated by a bar check | since the function has no other way to discern the measure length). Here is a simple example:

```latex
\relative c'' \{
  \time 3/16
  \set \texttt{Timing.beatStructure} = 2,1
  \set \texttt{Timing.beamExceptions} =
  c16 c c |
  \repeat unfold 6 \{ c32 \} |
}\}
```

**Note:** A `beamExceptions` value must be *complete* exceptions list. That is, every exception that should be applied must be included in the setting. It is not possible to add, remove, or change only one of the exceptions. While this may seem cumbersome, it means that the current beaming settings need not be known in order to specify a new beaming pattern.

When the time signature is changed, default values of `Timing.baseMoment`, `Timing.beatStructure`, and `Timing.beamExceptions` are set. Setting the time signature will reset the automatic beaming settings for the `Timing` context to the default behavior.

```latex
\relative a' \{
```
The default automatic beaming settings for a time signature are determined in scm/time-signature-settings.scm. Changing the default automatic beaming settings for a time signature is described in [Time signature], page 72.

Many automatic beaming settings for a time signature contain an entry for beamExceptions. For example, 4/4 time tries to beam the measure in two if there are only eighth notes. The beamExceptions rule can override the beatStructure setting if beamExceptions is not reset.

In a similar fashion, eighth notes in 3/4 time are beamed as a full measure by default. To beam eighth notes in 3/4 time on the beat, reset beamExceptions.

In engraving from the Romantic and Classical periods, beams often begin midway through the measure in 3/4 time, but modern practice is to avoid the false impression of 6/8 time (see Gould, p. 153). Similar situations arise in 3/8 time. This behavior is controlled by the context property beamHalfMeasure, which has effect only in time signatures with 3 in the numerator:
How automatic beaming works

When automatic beaming is enabled, the placement of automatic beams is determined by the context properties baseMoment, beatStructure, and beamExceptions.

The following rules, in order of priority, apply when determining the appearance of beams:

- If a manual beam is specified with [...] set the beam as specified, otherwise
- If a beam ending rule is defined in beamExceptions for the beam type, use it to determine the valid places where beams may end, otherwise
- If a beam ending rule is defined in beamExceptions for a longer beam type, use it to determine the valid places where beams may end, otherwise
- Use the values of baseMoment and beatStructure to determine the ends of the beats in the measure, and end beams at the end of beats.

In the rules above, the beam type is the duration of the shortest note in the beamed group.

The default beaming rules can be found in scm/time-signature-settings.scm.

Selected Snippets

Subdividing beams

The beams of consecutive 16th (or shorter) notes are, by default, not subdivided. That is, the three (or more) beams stretch unbroken over entire groups of notes. This behavior can be modified to subdivide the beams into sub-groups by setting the property subdivideBeams. When set, multiple beams will be subdivided at intervals defined by the current value of baseMoment by reducing the multiple beams to the number of beams that indicates the metric value of the subdivision. If the group following the division is shorter than the current metric value (usually because the beam is incomplete) the number of beams reflects the longest possible subdivision group. However, if there is only one note left after the division this restriction isn’t applied. Note that baseMoment defaults to one over the denominator of the current time signature if not set explicitly. It must be set to a fraction giving the duration of the beam sub-group using the ly:make-moment function, as shown in this snippet. Also, when baseMoment is changed, beatStructure should also be changed to match the new baseMoment:

```
\relative c' {
  c32[ c c c c c c]
  \set subdivideBeams = ##t
  c32[ c c c c c c]

  % Set beam sub-group length to an eighth note
  \set baseMoment = #(ly:make-moment 1/8)
  \set beatStructure = 2,2,2,2
  c32[ c c c c c c]

  % Set beam sub-group length to a sixteenth note
  \set baseMoment = #(ly:make-moment 1/16)
  \set beatStructure = 4,4,4,4
```
Strict beat beaming

Beamlets can be set to point in the direction of the beat to which they belong. The first beam avoids sticking out flags (the default); the second beam strictly follows the beat.

```
\relative c'' {
  \time 6/8
  a8. a16 a a
  \set strictBeatBeaming = ##t
  a8. a16 a a
}
```

Conducting signs, measure grouping signs

Beat grouping within a measure is controlled by the beatStructure context property. Values of beatStructure are established for many time signatures in file scm/time-signature-settings.scm. Values of beatStructure can be changed or set with \set. Alternatively, \time can be used to both set the time signature and establish the beat structure. For this, you specify the internal grouping of beats in a measure as a list of numbers (in Scheme syntax) before the time signature.

\time applies to the Timing context, so it will not reset values of beatStructure or baseMoment that are set in other lower-level contexts, such as Voice.

If the Measure_grouping_ engraver is included in one of the display contexts, measure grouping signs will be created. Such signs ease reading rhythmically complex modern music. In the example, the 9/8 measure is grouped in two different patterns using the two different methods, while the 5/8 measure is grouped according to the default setting in scm/time-signature-settings.scm:

```
\score {
  \new Voice \relative c'' {
```
\time 9/8
g8 g d d g a ( bes g) |
\set Timing.beatStructure = 2,2,3
g8 g d d g a ( bes g) |
\time 4,5 9/8
g8 g d d g a ( bes g) |
\time 5/8
a4. g4 |
}
\layout {
\context {
 \Staff
 \consists "Measure_grouping_engraver"
}
}

Beam endings in Score context

Beam-ending rules specified in the Score context apply to all staves, but can be modified at both Staff and Voice levels:
\relative c' {
 \time 5/4
 % Set default beaming for all staves
 \set Score.baseMoment = #(ly:make-moment 1/8)
 \set Score.beatStructure = 3,4,3
 <<
 \new Staff {
 c8 c c c c c c c c
 } 
 \new Staff {
 % Modify beaming for just this staff
 \set Staff.beatStructure = 6,4
 c8 c c c c c c c c
 }
 \new Staff {
 % Inherit beaming from Score context
 <<
 { 
 voiceOne
 c8 c c c c c c c c
 }
 % Modify beaming for this voice only
}
\new Voice {
\voiceTwo
\set Voice.beatStructure = 6,4
   a8  a  a  a  a  a  a  a  a
}
}
}

Installed Files: scm/time-signature-settings.scm.

Snippets: Section “Rhythms” in Snippets.

Known issues and warnings

If a score ends while an automatic beam has not been ended and is still accepting notes, this last beam will not be typeset at all. The same holds for polyphonic voices, entered with << ... \ \ ... >>. If a polyphonic voice ends while an automatic beam is still accepting notes, it is not typeset. The workaround for these problems is to manually beam the last beam in the voice or score.

By default, the Timing translator is aliased to the Score context. This means that setting the time signature in one staff will affect the beaming of the other staves as well. Thus, a time signature setting in a later staff will reset custom beaming that was set in an earlier staff. One way to avoid this problem is to set the time signature in only one staff.

<<
\new Staff {
\time 3/4
\set Timing.baseMoment = #(ly:make-moment 1/8)
\set Timing.beatStructure = 1,5
\set Timing.beamExceptions = #'()
\repeat unfold 6 { a'8 }
}
\new Staff {
\repeat unfold 6 { a'8 }
}
>>
The default beam settings for the time signature can also be changed, so that the desired beaming will always be used. Changes in automatic beaming settings for a time signature are described in [Time signature], page 72.

<<
\new Staff {
    \overrideTimeSignatureSettings
    3/4 % timeSignatureFraction
    1/8 % baseMomentFraction
    1,5 % beatStructure
    #'() % beamExceptions
    \time 3/4
    \repeat unfold 6 { a'8 }
}
\new Staff {
    \time 3/4
    \repeat unfold 6 { a'8 }
}
>>

Manual beams

In some cases it may be necessary to override the automatic beaming algorithm. For example, the autobeamer will not put beams over rests or bar lines, and in choral scores the beaming is often set to follow the meter of the lyrics rather than the notes. Such beams can be specified manually by marking the begin and end point with [ and ].

\relative { r4 r8[ g' a r] r g[ | a] r }

Beaming direction can be set manually using direction indicators:

\relative { c'8^[ d e] c,_[ d e f g] }
Individual notes may be marked with `\noBeam` to prevent them from being beamed:

\begin{verbatim}
\relative {
  \time 2/4
  c''8 \noBeam c c
}
\end{verbatim}

Grace note beams and normal note beams can occur simultaneously. Unbeamed grace notes are not put into normal note beams.

\begin{verbatim}
\relative {
  c''4 d8[
     \grace { e32 d c d }
  ]
  e8] e[ e
     \grace { f16 }
  ]
  e8 e]
}
\end{verbatim}

Even more strict manual control with the beams can be achieved by setting the properties `stemLeftBeamCount` and `stemRightBeamCount`. They specify the number of beams to draw on the left and right side, respectively, of the next note. If either property is set, its value will be used only once, and then it is erased. In this example, the last `f` is printed with only one beam on the left side, i.e., the eighth-note beam of the group as a whole.

\begin{verbatim}
\relative a' {
  a8[ r16 f g a]
  a8[ r16
     \set stemLeftBeamCount = #2
     \set stemRightBeamCount = #1
     f16
     \set stemLeftBeamCount = #1
     g16 a]
}
\end{verbatim}

Predefined commands

`\noBeam`.

**Selected Snippets**

**Flat flags and beam nibs**

Flat flags on lone notes and beam nibs at the ends of beamed figures are both possible with a combination of `stemLeftBeamCount`, `stemRightBeamCount` and paired `[]` beam indicators.

For right-pointing flat flags on lone notes, use paired `[]` beam indicators and set `stemLeftBeamCount` to zero (see Example 1).
For left-pointing flat flags, set \stemRightBeamCount instead (Example 2).

For right-pointing nibs at the end of a run of beamed notes, set \stemRightBeamCount to a positive value. And for left-pointing nibs at the start of a run of beamed notes, set \stemLeftBeamCount instead (Example 3).

Sometimes it may make sense for a lone note surrounded by rests to carry both a left- and right-pointing flat flag. Do this with paired [] beam indicators alone (Example 4).

(Note that \stemLeftBeamCount is always equivalent to \once \set. In other words, the beam count settings are not “sticky”, so the pair of flat flags attached to the lone c'16[] in the last example have nothing to do with the \set two notes prior.)

\score {
  \new RhythmicStaff {
    \set stemLeftBeamCount = #0

    \set stemLeftBeamCount = #2
    16 16
  }
  >>
}
Feathered beams

Feathered beams are used to indicate that a small group of notes should be played at an increasing (or decreasing) tempo, without changing the overall tempo of the piece. The extent of the feathered beam must be indicated manually using [ and ], and the beam feathering is turned on by specifying a direction to the Beam property grow-direction.

If the placement of the notes and the sound in the MIDI output is to reflect the ritardando or accelerando indicated by the feathered beam the notes must be grouped as a music expression delimited by braces and preceded by a featherDurations command which specifies the ratio between the durations of the first and last notes in the group.

The square brackets show the extent of the beam and the braces show which notes are to have their durations modified. Normally these would delimit the same group of notes, but this is not required: the two commands are independent.

In the following example the eight 16th notes occupy exactly the same time as a half note, but the first note is one half as long as the last one, with the intermediate notes gradually lengthening. The first four 32nd notes gradually speed up, while the last four 32nd notes are at a constant tempo.

\begin{verbatim}
\relative c' { 
   \override Beam.grow-direction = #LEFT \featherDurations 2/1 
   { c16[ c c c c c c ] } 
   \override Beam.grow-direction = #RIGHT \featherDurations 2/3 
   { c32[ d e f ] } 
   \% revert to non-feathered beams 
   \override Beam.grow-direction = #'() 
   { g32[ a b c ] } 
\end{verbatim}
The spacing in the printed output represents the note durations only approximately, but the MIDI output is exact.

**Predefined commands**

\featherDurations.

**See also**

Snippets: Section “Rhythms” in Snippets.

**Known issues and warnings**

The `\featherDurations` command only works with very short music snippets, and when numbers in the fraction are small.

### 1.2.5 Bars

**Bar lines**

Bar lines are used to delimit measures and sections, and to indicate repetition. Normally, simple bar lines are automatically inserted into the printed output at places according to the current time signature. Various commands insert other kinds of bar lines automatically as part of their effect (see [Automatic bar lines], page 114).

A bar line inserted automatically can be changed to another type with the `\bar` command:

```latex
\relative { e'4 d c2 \bar "!" }
```

The final note of a measure is not required to end on the automatically inserted bar line: the note is assumed to carry over into the next measure. But if a long sequence of such carry-over measures appears, the music can appear compressed or even flowing off the page. This is because automatic line breaks happen only at the end of complete measures, i.e., where all notes end before the end of a measure.

**Note:** An incorrect duration can inhibit line breaks, leading to a line of highly compressed music or music that flows off the page.

Line breaks are also permitted at manually inserted bar lines even within incomplete measures. To allow a line break without printing a bar line, use `\allowBreak`; see Section 4.3.1 [Line breaking], page 613.

This and other special bar lines may be inserted manually at any point. When they coincide with the end of a measure they replace the simple bar line which would have been inserted there automatically. When they do not coincide with the end of a measure the specified bar line is inserted at that point in the printed output.

Manual bar lines are purely visual. They do not affect any of the properties that a normal bar line would affect, such as measure numbers and accidentals. They do not affect the calculation and placement of subsequent automatic bar lines. When a manual bar line is placed where a normal bar line already exists, the effects of the original bar line are not altered.
Various single and double bar lines are available for manual insertion:
\begin{verbatim}
\relative {
  f'1 \bar "|"
  f1 \bar "."
  g1 \bar "||"  % see \section
  a1 \bar ".|"
  b1 \bar ".:"
  c1 \bar ".:."
  d1 \bar ".:."  % see \fine
  e1
}
\end{verbatim}

\begin{verbatim}
\relative {
  f'1 \bar ";"
  g1 \bar "!"
  a1
}
\end{verbatim}

\begin{verbatim}
\relative {
  f'1 \bar ".:"  
  g1 \bar ".:.."
  a1 \bar ".:.:"
  b1 \bar ".:.:"
  c1 \bar ".:.:"  
  d1 \bar ".:.:"  
  e1 \bar ".:].[":"
  f1 \bar ".:]."
  g1 \bar ".:"
  a1
}
\end{verbatim}

Together with dotted and dashed bar lines:
\begin{verbatim}
\relative {
  f'1 \bar ";;"
  g1 \bar "!!!"
  a1
}
\end{verbatim}

\begin{verbatim}
\relative {
  f'1 \bar ";:;"
  g1 \bar ";:..;"
  a1 \bar ";:.:;"
  b1 \bar ";:.:.;"
  c1 \bar ";:.:.;
  d1 \bar ";:.:.;"
  e1 \bar ";:;[":"
  f1 \bar ";:;[":"
  g1 \bar ";:;[":"
  a1
}
\end{verbatim}

Ticks and short bar lines are also available; however, in the context of Gregorian chant, using \texttt{\textbackslash divisioMinima} and \texttt{\textbackslash divisioMaior} is preferable (see [Divisiones], page 503).
\begin{verbatim}
\texttt{f'1 \bar "":"}
\texttt{g1 \bar ",;"}
\texttt{a1}
\end{verbatim}
LilyPond supports Kievan notation and provides a special Kievan bar line:
\f'1 \bar "k"

\begin{Verbatim}
\fixed c' { 
c4 4 4 4 
\bar "S"
d4 4 4 4 \break 
\bar "S"
e4 4 4 4 
\bar "S-|"
f4 4 4 4 \break 
\bar "S-|

g4 4 4 4 
\bar "S-||"
a4 4 4 4 \break 
\bar "S-||"
b4 4 4 4 
\bar "S-S"
c'4 4 4 4 \break 
\bar "S-S"
de'1
\end{Verbatim}

Although the bar line types signifying repeats may be inserted manually they do not in themselves cause LilyPond to recognize a repeated section. Such repeated sections are better entered
using the various repeat commands (see Section 1.4 [Repeats], page 166), which automatically print the appropriate bar lines, which can be customized (see [Automatic bar lines], page 114).

In addition, you can specify ".|:-||", which is equivalent to ".|:" except at line breaks, where it gives a double bar line at the end of the line and a start repeat at the beginning of the next line.

\begin{verbatim}
\fixed c' { 
c4 4 4 4 
\bar ".|:" 
d4 4 4 4 \break 
\bar ".|:" 
e4 4 4 4 
\bar ".|:-|
fa 4 4 4 4 \break 
\bar ".|:-|
fg 4 4 4 4 
\bar ".|:-|
aa 4 4 4 4 \break 
\bar ".|:-|
bb 4 4 4 4 
\bar ".|:-|.
c'4 4 4 4 \break 
\bar ".|:-|.
d'4 4 4 4 
}\end{verbatim}

There are various combinations of repeats with the segno sign:

\begin{verbatim}
\fixed c' { 
g,4 4 4 4 
\bar "|:.S" 
a,4 4 4 4 \break 
\bar "|:.S" 
b,4 4 4 4 
\bar "|:.S-S"
}\end{verbatim}
c4 4 4 4 \break
\bar ".:|.S-\S"
d4 4 4 4
\bar "S.:|:-\S"
e4 4 4 4 \break
\bar "S.:|:-\S"
f4 4 4 4
\bar "S.:|:":
g4 4 4 4 \break
\bar "S.:|:-\S"
a4 4 4 4
\bar "S.:|:-\S"
b4 4 4 4 \break
\bar "S.:|:-\S"
c'4 4 4 4
\bar "S.:|:-|"
d'4 4 4 4 \break
\bar "S.:|:-|"
e'4 4 4 4
\bar ":|.|S.:|
f'4 4 4 4 \break
\bar ":|.|S.:|
g'4 4 4 4
\bar ".:|.|S.:|
a'4 4 4 4 \break
\bar ":|.|S.:|
b'1
}
Many of the repeat and segno bar lines above can be inserted automatically by \repeat commands (see Section 1.4 [Repeats], page 166).

New bar line types can be defined with \defineBarLine:

\defineBarLine bartype #'(end begin span)

In addition to bartype (the character string that will then be used to refer to that new bar line), it takes three values: the first two determine the bar line’s appearance when it occurs at a line break, in which case the first and second given glyphs are printed respectively at the end of the system and at the beginning of the next one. The third given glyph is only relevant in multi-staff systems (see [Grouping staves], page 215), where it is used as span bar, printed between staves.

The \defineBarLine arguments specifying replacement glyphs can be set to #t to copy the mid-line glyph or #f to create no bar line. The empty string, "", yields a zero-width bar line.

After the definition, the new bar line can be used by \bar bartype.

There are several bar line elements, and there are predefined bar types that use most of them individually. Some elements are primarily intended to be combined with others; those do not have predefined individual bar types.

\defineBarLine ":" #'(#f #t #f)
\defineBarLine ":=" #'(#t #f #t)
\defineBarLine ":[" #'(#f #t #f)
\defineBarLine ":]\" #'(#t #f #f)

\new Staff {
  s1 \bar "":"
  s1 \bar ","
  s1 \bar ":"
  s1 \bar ":,"
  s1 \bar ":|"
  s1 \bar ":,"
  s1 \bar ":!"
  s1 \bar ":;"
  s1 \bar "k"
  s1 \bar "S"
  s1 \bar "="
  s1 \bar ":[
  s1 \bar ":]"
  s1 \bar ""
}
The "=" bar line provides a double span bar line for use in combination with the segno sign. Using it as a stand-alone double thin bar line is not recommended; \bar "||" is preferred.

The "-" sign starts annotations to bar lines which are useful to distinguish those with identical appearance but different behavior at line breaks and/or different span bars. The part following the "-" sign is not used for building up the bar line.

\defineBarLine "||-dashedSpan" #'(#t #f "!!")

\new StaffGroup <<
  \new Staff \relative c'' {
    c1 \bar "||"
    c1 \bar "||-dashedSpan"
    c1
  }
  \new Staff \relative c'' {
    c1
    c1
    c1
  }
>>

Furthermore, the space character " " serves as a placeholder for defining span bars correctly aligned to the main bar lines:

\defineBarLine "::.-wrong" #'(#t #f "|")
\defineBarLine "::.-right" #'(#t #f "|")

\new StaffGroup <<
  \new Staff \relative c'' {
    c1 \bar "::.-wrong"
    c1 \bar "::.-right"
    c1
  }
  \new Staff \relative c'' {
    c1
    c1
    c1
  }
>>
New bar line types defined using \defineBarLine may even, in turn, be used in a second bar line definition. Such ‘nested’ definitions make it possible to use customized glyphs in places where it would not otherwise be possible, such as system ends:

\defineBarLine "||-dashEverywhere" #'("!!" "!!" "!!")
\defineBarLine "||-advancedDashSpan" #'("||-dashEverywhere" #f "!!")
\new StaffGroup <<
\new Staff \relative c'' { 
c1 \bar "||"  
c1 \bar "||-advancedDashSpan"  
c1 \bar "||-advancedDashSpan" 
}
\new Staff \relative c''' { 
c1  
c1  
c1  
}
>>

If additional elements are needed, LilyPond provides a simple way to define them. For more information on modifying or adding bar lines, see file scm/bar-line.scm.

In scores with many staves, a \bar command in one staff is automatically applied to all staves. The resulting bar lines are connected between different staves of a StaffGroup, PianoStaff, or GrandStaff.

<<
\new StaffGroup <<
\new Staff \relative { 
e'4 d  
\bar "||"  
f4 e  
}
\new Staff \relative { \clef bass c'4 g e g }  
>>
\new Staff \relative { \clef bass c'2 c2 }  
>>
The bar type used for automatically inserted measure bar lines is ":" . This may be changed at any time with \set Timing.measureBarType = bartype .

Automatic bar lines
Various commands other than \bar can also create bar lines as part of their effect. The bar lines created in these cases can be changed by setting context properties. If a property is set to ' () or is unset, it is ignored; otherwise, the value must be a predefined bar type or one previously defined with the \defineBarLine command (see [Bar lines], page 106).

Multiple reasons for creating different automatic bar lines may apply at the same time. Conflicts are resolved in part by providing properties for predetermined combinations and in part by a priority scheme. The table below presents the available properties in order of increasing priority.

<table>
<thead>
<tr>
<th>Property</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>underlyingRepeatBarType</td>
<td>Used at points of repetition or departure where no bar line would otherwise appear. This is expected when repeated sections are not aligned to measures. Several commands employ this bar type: \codaMark, \inStaffSegno, \repeat segno, \repeat volta, and \segnoMark.</td>
</tr>
<tr>
<td>caesuraType underlying-bar-line</td>
<td>Used at \caesura; see [Phrase bar lines in hymn tunes], page 372.</td>
</tr>
<tr>
<td>measureBarType</td>
<td>Used at a measure boundary.</td>
</tr>
<tr>
<td>caesuraType bar-line</td>
<td>Used at \caesura; see [Phrase bar lines in hymn tunes], page 372.</td>
</tr>
<tr>
<td>sectionBarType</td>
<td>Used at a section break created by \section.</td>
</tr>
<tr>
<td>fineBarType</td>
<td>Used at \fine.</td>
</tr>
</tbody>
</table>
doubleRepeatBarType
doubleRepeatSegnoBarType
doubleRepeatBarType
doubleRepeatSegnoBarType
fineSegnoBarType
fineStartRepeatSegnoBarType
segnoBarType
startRepeatBarType
startRepeatSegnoBarType

Only one of these bar types is used at a time; which one is used depends on the structure of the piece.

Properties with startRepeat or endRepeat in the name are used at the start or end of a repeated section created by \repeat volta, and properties with doubleRepeat in the name are used where the end of one repeated section and the start of another coincide.

Properties with segno in the name are used at an in-staff segno, which can be created by \repeat segno or \segnoMark when the segnoStyle property is set to bar-line, or created by \inStaffSegno.

Properties with fine in the name are used at \fine.

Priority applies independently to beginning-, middle-, and end-of-line bar lines, allowing a lower-priority bar line to appear where higher-priority bar types have no glyphs defined (see [Bar lines], page 106).

\fixed c' {
  c1 \section \break
  \repeat volta 2 d1
}

\relative c' {
  \repeat volta 2 { c1 }
  \set Score.doubleRepeatBarType = "\dots\dots"
  \repeat volta 2 { c1 }
  \set Score.doubleRepeatBarType = "\dots\dot\dots"
  \repeat volta 2 { c1 }
  \set Score.doubleRepeatBarType = "\dot\dot\dots"
  \repeat volta 2 { c1 }
}

Selected Snippets

Setting the double repeat default for volte

There are three different styles of double repeats for volte, that can be set using doubleRepeatBarType.
Bar numbers

Bar numbers are typeset by default at the start of every line except the first line. The number itself is stored in the `currentBarNumber` property, which is normally updated automatically for every measure. It may also be set manually:

\begin{verbatim}
\relative c' {
  \relative c' {c c c c}
  \break
  \set Score.currentBarNumber = #50
  \relative c' {c c c c}
}
\end{verbatim}

The default behavior of only printing bar numbers at the start of every line can be changed through the `break-visibility` property of `BarNumber`. This takes three values which may be set to `#t` or `#f` to specify whether the corresponding bar number is visible or not. The order of the three values is end of line visible, middle of line visible, beginning of line visible. In the following example bar numbers are printed at all possible places:

\begin{verbatim}
\relative c' {
  \override Score.BarNumber.break-visibility = ##(#t #t #t)
  \set Score.currentBarNumber = #11
  c | c | c | c |
  \break
  c | c | c | c |
}
\end{verbatim}

Selected Snippets
**Printing the bar number for the first measure**

By default, the first bar number in a score is suppressed if it is less than or equal to 1. By setting `barNumberVisibility` to `all-bar-numbers-visible`, any bar number can be printed for the first measure and all subsequent measures.

```
\layout {
  indent = 0
  ragged-right = ##t
}
\relative c' {
  \set Score.barNumberVisibility = #all-bar-numbers-visible
  c1 | d | e | f \break
  g1 | e | d | c
}
```

![Example of printing bar numbers for the first measure](image)

**Printing bar numbers at regular intervals**

By setting the `barNumberVisibility` property, bar numbers can be printed at regular intervals. Here the bar numbers are printed every two measures except at the end of the line.

```
\relative c' {
  \override Score.BarNumber.break-visibility = #end-of-line-invisible
  \set Score.currentBarNumber = #11
  % Print a bar number every second measure
  \set Score.barNumberVisibility = #(every-nth-bar-number-visible 2)
  c1 | c | c | c | c
  \break
  c1 | c | c | c | c
}
```

![Example of printing bar numbers at regular intervals](image)

**Printing bar numbers with changing regular intervals**

Using the `set-bar-number-visibility` context function, bar number intervals can be changed.

```
\relative c' {
  \override Score.BarNumber.break-visibility = #end-of-line-invisible
  \context Score \applyContext #(set-bar-number-visibility 4)
  \repeat unfold 10 c'1
  \context Score \applyContext #(set-bar-number-visibility 2)
}
```

![Example of printing bar numbers with changing intervals](image)

\repeat unfold 10 c

\layout {
  \context {
    \Score
    barNumberVisibility = \first-bar-number-invisible-save-broken-bars
    \override BarNumber.break-visibility = ##(#f #t #t)
  }
}

\relative c' {
  c1 | d | e | f2 \bar "" \break
  fis | g1 | e2 \bar "" \break
  <>"reenabled default"
  \% back to default -
  \% \unset \Score.barNumberVisibility would do so as well
  \set \Score.barNumberVisibility =
    \first-bar-number-invisible-and-no-parenthesized-bar-numbers
  es | d1 | c
}

\relative c' {
  c | d | e | f2 \break
  fis | g1 | e2 \break
  <>"reenabled default"
  \set \Score.barNumberVisibility =
    \first-bar-number-invisible-and-no-parenthesized-bar-numbers
  es | d1 | c
}

Printing bar numbers for broken measures

By default a BarNumber of a broken measure is not repeated at the beginning of the new line. Use first-bar-number-invisible-save-broken-bars for barNumberVisibility to get a parenthesized BarNumber there.

\relative c' {
  c | d | e | f2 \bar "" \break
  fis | g1 | e2 \bar "" \break
  <>"reenabled default"
  \set \Score.barNumberVisibility =
    \first-bar-number-invisible-and-no-parenthesized-bar-numbers
  es | d1 | c
}
Printing bar numbers using modulo-bar-number-visible

If the remainder of the division of the current BarNumber by the first argument of modulo-bar-number-visible equals its second argument print the BarNumber.

Useful to print the BarNumber at certain distances, p.e:

- \( (\text{modulo-bar-number-visible } 3 \ 2) \rightarrow \text{prints } 2,5,8 \)
- \( (\text{modulo-bar-number-visible } 4 \ 2) \rightarrow \text{prints } 2,6,10 \)
- \( (\text{modulo-bar-number-visible } 3 \ 1) \rightarrow \text{prints } 3,5,7 \)
- \( (\text{modulo-bar-number-visible } 5 \ 2) \rightarrow \text{prints } 2,7,12 \)

```
\layout {
  \context {
    \Score
    \override BarNumber.break-visibility = ##(#f #t #t)
    barNumberVisibility = #(modulo-bar-number-visible 3 2)
  }
}
```

\relative c' {  
c1 | d | e | f \break  
g1 | e | d | c
}

Printing bar numbers inside boxes or circles

Bar numbers can also be printed inside boxes or circles.

```
\relative c' {  
% Prevent bar numbers at the end of a line and permit them elsewhere  
\override Score.BarNumber.break-visibility = #end-of-line-invisible  
\set Score.barNumberVisibility = #(every-nth-bar-number-visible 4)

% Increase the size of the bar number by 2  
\override Score.BarNumber.font-size = #2

% Draw a box round the following bar number(s)  
\override Score.BarNumber.stencil  
  = #(make-stencil-boxer 0.1 0.25 ly:text-interface::print)  
\repeat unfold 5 \{ c1 \}

% Draw a circle round the following bar number(s)  
\override Score.BarNumber.stencil  
  = #(make-stencil-circler 0.1 0.25 ly:text-interface::print)  
\repeat unfold 4 \{ c1 \} \bar "|."
Alternative bar numbering

Two alternative methods for bar numbering can be set, especially for when using repeated music.

\relative c'\{
\set Score.alternativeNumberingStyle = #'numbers
\repeat volta 3 { c4 d e f | }
\alternative {
  { c4 d e f | c2 d \break }
  { f4 g a b | f4 g a b | f2 a | \break }
  { c4 d e f | c2 d }
}
c1 \break
\set Score.alternativeNumberingStyle = #'numbers-with-letters
\repeat volta 3 { c,4 d e f | }
\alternative {
  { c4 d e f | c2 d \break }
  { f4 g a b | f4 g a b | f2 a | \break }
  { c4 d e f | c2 d }
}
c1\}

\relative c\{
\set Score.alternativeNumberingStyle = #'numbers
\repeat volta 3 { c, d e f | }
\alternative {
  { c,4 d e f | c2 d \break }
  { f,4 g a b | f,4 g a b | f2 a | \break }
  { c,4 d e f | c2 d }
}
c1\}

\relative c\{
\set Score.alternativeNumberingStyle = #'numbers
\repeat volta 3 { c, d e f | }
\alternative {
  { c,4 d e f | c2 d \break }
  { f,4 g a b | f,4 g a b | f2 a | \break }
  { c,4 d e f | c2 d }
}
c1\}

\relative c\{
Aligning bar numbers

Bar numbers by default are right-aligned to their parent object. This is usually the left edge of a line or, if numbers are printed within a line, the left hand side of a bar line. The numbers may also be positioned directly over the bar line or left-aligned to the bar line.

\relative c' {
  \set Score.currentBarNumber = #111
  \override Score.BarNumber.break-visibility = #all-visible
  \% Increase the size of the bar number by 2
  \override Score.BarNumber.font-size = #2
  \% Print a bar number every second measure
  \set Score.barNumberVisibility = #(every-nth-bar-number-visible 2)
  c1 | c1
  \% Center-align bar numbers
  \override Score.BarNumber.self-alignment-X = #CENTER
  c1 | c1
  \% Left-align bar numbers
  \override Score.BarNumber.self-alignment-X = #LEFT
  c1 | c1
}

Removing bar numbers from a score

Bar numbers can be removed entirely by removing the Bar_number_engraver from the Score context.

\layout {
  \context {
    \Score
    \omit BarNumber
    \% or:
    \%\remove "Bar_number_engraver"
  }
}

\relative c'' {
  c4 c c c \break
  c4 c c c
}

\relative c' {
  \set Score.currentBarNumber = #111
  \override Score.BarNumber.break-visibility = #all-visible
  \% Increase the size of the bar number by 2
  \override Score.BarNumber.font-size = #2
  \% Print a bar number every second measure
  \set Score.barNumberVisibility = #(every-nth-bar-number-visible 2)
  c1 | c1
  \% Center-align bar numbers
  \override Score.BarNumber.self-alignment-X = #CENTER
  c1 | c1
  \% Left-align bar numbers
  \override Score.BarNumber.self-alignment-X = #LEFT
  c1 | c1
}
**Measure-centered bar numbers**

For film scores, a common convention is to center bar numbers within their measure. This is achieved through setting the `centerBarNumbers` context property to true. When this is used, the type of the bar number grobs is `CenteredBarNumber` rather than `BarNumber`.

This example demonstrates a number of settings: the centered bar numbers are boxed and placed below the staves.

\begin{verbatim}
\layout {
  \context {
    \Score
    centerBarNumbers = ##t
    barNumberVisibility = #all-bar-numbers-visible
    \override CenteredBarNumber.stencil
      = #(make-stencil-boxer 0.1 0.25 ly:text-interface::print)
    \override CenteredBarNumberLineSpanner.direction = #DOWN
  }
}

\new StaffGroup <<
  \new Staff \relative c' {
    d4-. f8( e d4) bes'-> |
    d,-. f8( e d4) cis'-> |
    g-. f8( d e4) g-> |
    a,1-> |
  }
  \new Staff \relative c {
    \clef bass
    d4 f8 e d2- |
    4 f8 e d2- |
    4 4 2 |
    a1 |
  }
>>
\end{verbatim}

Known issues and warnings

Bar numbers may collide with the top of the StaffGroup bracket, if there is one. To solve this, the padding property of BarNumber can be used to position the number correctly. See Section “StaffGroup” in Internals Reference and Section “BarNumber” in Internals Reference for more.

Bar and bar number checks

Bar checks help detect errors in the entered durations. A bar check may be entered using the bar symbol, |, at any place where a bar line is expected to fall. If bar check lines are encountered at other places, a list of warnings is printed in the log file, showing the line numbers and lines in which the bar checks failed. In the next example, the second bar check will signal an error.

\time 3/4 c2 e4 | g2 |

An incorrect duration can result in a completely garbled score, especially if the score is polyphonic, so a good place to start correcting input is by scanning for failed bar checks and incorrect durations.

If successive bar checks are off by the same musical interval, only the first warning message is displayed. This allows the warning to focus on the source of the timing error.

Bar checks can also be inserted in lyrics:

\lyricmode {
  \time 2/4
  Twin -- kle | Twin -- kle |
}

Note that bar check marks in lyrics are evaluated at the musical moment when the syllable following the check mark is processed. If the lyrics are associated with the notes of a voice which has a rest at the beginning of a bar, then no syllable can be located at the start of that bar and a warning will be issued if a bar check mark is placed in the lyrics at that position.

It is also possible to redefine the action taken when a bar check or pipe symbol, |, is encountered in the input, so that it does something other than a bar check. This is done by assigning a music expression to "|". In the following example | is set to insert a double bar line wherever it appears in the input, rather than checking for end of bar.

"|" = \bar "||"
{
  c'2  c'  |
  c'2  c'  
  c'2  c'  
  c'2  c'
}

When copying large pieces of music, it can be helpful to check that the LilyPond bar number corresponds to the original that you are entering from. This can be checked with \barNumberCheck, for example,

\barNumberCheck #123

will print a warning if the currentBarNumber is not 123 when it is processed.

Snippets: Section “Rhythms” in Snippets.
Rehearsal marks

To print a rehearsal mark, use the \mark command.

```
relative c' {
    c1 \mark \default
    c1 \mark \default
    c1 \mark \default
    c1 \mark \default
    c1 \mark \default
}
```

The mark is incremented automatically if you use \mark \default, but you can also use an integer argument to set the mark manually. The value to use is stored in the property rehearsalMark.

```
relative c' {
    c1 \mark \default
    c1 \mark \default
    c1 \mark \default
    c1 \mark \default
    c1 \mark \default
    c1 \mark #8
    c1 \mark \default
    c1 \mark \default
}
```

The letter 'I' is skipped in accordance with engraving traditions. If you wish to include the letter 'I', then use one of the following commands, depending on which style of rehearsal mark you want (letters only, letters in a hollow box, or letters in a hollow circle).

```
set Score.rehearsalMarkFormatter = #format-mark-alphabet
set Score.rehearsalMarkFormatter = #format-mark-box-alphabet
set Score.rehearsalMarkFormatter = #format-mark-circle-alphabet
relative c' {
    set Score.rehearsalMarkFormatter = #format-mark-box-alphabet
    c1 \mark \default
    c1 \mark \default
    c1 \mark \default
    c1 \mark #8
    c1 \mark \default
    c1 \mark \default
}
```

The style is defined by the property rehearsalMarkFormatter. It is a function taking the current mark (an integer) and the current context as argument. It should return a markup object. In the following example, rehearsalMarkFormatter is set to a predefined procedure. After a few measures, it is set to a procedure that produces a boxed number.

```
relative c' {
```
The file `scm/translation-functions.scm` contains the definitions of `format-mark-letters` (the default format), `format-mark-box-letters`, `format-mark-numbers`, and `format-mark-box-numbers`. These can be used as inspiration for other formatting functions.

You may use `format-mark-barnumbers`, `format-mark-box-barnumbers`, and `format-mark-circle-barnumbers` to get bar numbers instead of incremented numbers or letters.

For common tweaks to the positioning of rehearsal marks, see Section 1.8.2 [Formatting text], page 287. For more precise control, consider `break-alignable-interface` (see Section 5.4.9 [Aligning objects], page 707).

The file `scm/translation-functions.scm` contains the definitions of `format-mark-numbers` and `format-mark-letters`. They can be used as inspiration for other formatting functions.

### Selected Snippets

#### Printing marks on every staff

Although marks are normally only printed above the topmost staff, they may also be printed on every staff.

```latex
\score {
  \new Staff { \mark \default c''1 \textMark "molto" c'' }
  \new Staff { \mark \default c'1 \textMark "molto" c' }
  \layout {
    \context { \Score 
      \remove Mark_engraver
      \remove Text_mark_engraver
      \remove Staff_collecting_engraver
    }
    \context { \Staff 
      \consists Mark_engraver
      \consists Text_mark_engraver
      \consists Staff_collecting_engraver
    }
  }
}
```
Measure counts

Measure counts are a way to number consecutive measures, for example as an aid for musicians to count measures in written-out repeats. Using this feature requires adding the Measure_counter_engraver to a context type, usually Staff or Score.

\layout {
  \context {
    \Staff
    \consists Measure_counter_engraver
  }
}

\relative c' {
  \time 6/8
  \key e \minor
  r4 a8 b c dis
  \startMeasureCount
  \repeat unfold 3 {
    e8 b e g8. fis32 e dis8
  }
  \stopMeasureCount
  b'4. r
}

Broken measures are numbered in parentheses.

\layout {
Compressed multi-measure rests receive special treatment: the full measure range is shown.

\context {  
  \Staff  
  \consists \Measure_counter_engraver  
}

\relative c' {  
  \time 6/8  
  \key e \minor  
  r4 a8 b c dis  
  \startMeasureCount  
  e8 b e g8. fis32 e dis8  
  e8 b e \break g8. fis32 e dis8  
  e8 b e g8. fis32 e dis8  
  \stopMeasureCount  
  b'4. r  
}

Compressed multi-measure rests receive special treatment: the full measure range is shown.

\layout {  
  \context {  
    \Staff  
    \consists \Measure_counter_engraver  
  }  
  \context {  
    \Voice  
    \override MultiMeasureRestNumber.direction = #DOWN  
  }  
}

\compressMMRests {  
  \key e \minor  
  \startMeasureCount  
  \new CueVoice {  
    b4. ( e'8) b8 r e' r  
  }  
  R1*2  
  \stopMeasureCount  
  g'2\> fis'2\!  
}
Measure counters honor alternative numbering styles. If the style is numbers-with-letters, they render best with a textual font.

\layout {
  \context {
    \Score
    alternativeNumberingStyle = #'numbers-with-letters
  }
  \context {
    \Staff
    \consists Measure_counter_engraver
    \override MeasureCounter.Y-offset = 6
    \override MeasureCounter.font-encoding = #'latin1
    \override MeasureCounter.font-size = 1
  }
}

\relative c' {
  \startMeasureCount
  \repeat volta 2 {
    c8 d e f c d e f
  }
  \alternative {
    { e4 d c b }
    { g'4 g c2 }
  }
  \bar "|."  \stopMeasureCount
}

\[\begin{array}{c}
  1 & 2a & 2b \\
  \end{array}\]

Predefined commands

\startMeasureCount, \stopMeasureCount.

Section divisions

The \section command marks a point where one section of music ends and another begins. It does not have to be followed by more music: it may also be used to emphasize that the written end of the music is not the end of the piece, such as at a D.C. instruction or where one movement continues into the next without a break. \section normally creates a double bar line, but its effect can depend on other notation, e.g., repeat bar lines.
The \fine command ends the piece, normally with a final bar line. It is not limited to use at
the written end of the music: it may also appear inside \repeat (see [Al-fine repeats], page 172).

A section can optionally be named with \sectionLabel (see [Section labels], page 281).

\fixed c' 
 \relative { 
 f1 \section \sectionLabel "Refrain" g1 a1 \fine }
\section

Refrain

For details on interactions of \fine and \section bar lines with other types of bar lines, and
options for changing their appearance, see [Automatic bar lines], page 114.

Internals Reference.

1.2.6 Special rhythmic concerns

Grace notes
Grace notes are musical ornaments, printed in a smaller font, that take up no additional logical
time in a measure.
\relative { 
 c''4 \grace b16 a4( \grace { b16 c16 } a2) }

There are three other types of grace notes possible; the acciaccatura – an unmeasured grace
note indicated by a slurred note with a slashed stem – and the appoggiatura, which takes a fixed
fraction of the main note it is attached to and prints without the slash. It is also possible to
write a grace note with a slashed stem, like the acciaccatura but without the slur, so as to place
it between notes that are slurred themselves, using the \slashedGrace function.
\relative { 
 \acciaccatura d''8 c4 
 \appoggiatura e8 d4 
 \acciaccatura { g16 f } e2 
 \slashedGrace a,8 g4 
 \slashedGrace b16 a4(
The placement of grace notes is synchronized between different staves. In the following example, there are two sixteenth grace notes for every eighth grace note:

```
\new Staff \relative { e''2 \grace { c16 d e f } e2 }
\new Staff \relative { c''2 \grace { g8 b } c2 }
```

If you want to end a note with a grace, use the `\afterGrace` command. It takes two arguments: the main note, and the grace notes following the main note:

```
\relative { c''1 \afterGrace d1 \{ c16[ d ] \} c1 }
```

This will place the grace notes after the start of the main note. The point of time where the grace notes are placed is a given fraction of the main note’s duration. The default setting of `afterGraceFraction = 3/4` may be redefined at top level. Individual `\afterGrace` commands may have the fraction specified right after the command itself instead.

The following example shows the results from setting with the default space, setting it at 15/16, and finally at 1/2 of the main note:

```
<<
\new Staff \relative {
  c'''1 \afterGrace d1 \{ c16[ d ] \} c1
}
\new Staff \relative {
  c'''1 \afterGrace 15/16 d1 \{ c16[ d ] \} c1
}
\new Staff \relative {
  c'''1 \afterGrace 1/2 d1 \{ c16[ d ] \} c1
}
>>
```
The effect of \afterGrace can also be achieved using spacers. The following example places the grace note after a space lasting 7/8 of the main note.

\new Voice \relative {
<<
  { d''1^\text{trill}_p \}
  { s2 s4. \text{grace} \{ c16 d \} }
>>
c1)
}

A \text{grace} music expression will introduce special typesetting settings, for example, to produce smaller type, and set directions. Hence, when introducing layout tweaks to override the special settings, they should be placed inside the grace expression. The overrides should also be reverted inside the grace expression. Here, the grace note’s default stem direction is overridden and then reverted.

\new Voice \relative {
\acciaccatura {
  \stemDown f''16->
  \stemNeutral
g4 e c2
}
}

Selected Snippets

Using grace note slashes with normal heads

The slash through the stem found in acciaccaturas can be applied in other situations.

\relative c' {
  \override Flag.stroke-style = #"grace"
c8( d2) e8( f4)
}

\text{Selected Snippets}

\text{Using grace note slashes with normal heads}

The slash through the stem found in acciaccaturas can be applied in other situations.
Tweaking grace layout within music

The layout of grace expressions can be changed throughout the music using the functions add-grace-property and remove-grace-property.

The following example undefines the Stem direction for this grace, so that stems do not always point up, and changes the default note heads to crosses.

```
\relative c'' {
  \new Staff {
    $\text{remove-grace-property 'Voice 'Stem 'direction}$
    $\text{add-grace-property 'Voice 'NoteHead 'style 'cross}$
    \new Voice {
      \acciaccatura { f16 } g4
      \grace { d16 e } f4
      \appoggiatura { f,32 g a } e2
    }
  }
}
```

Redefining grace note global defaults

The global defaults for grace notes are stored in the following identifiers.

- startGraceMusic
- stopGraceMusic
- startAcciaccaturaMusic
- stopAcciaccaturaMusic
- startAppoggiaturaMusic
- stopAppoggiaturaMusic

They are defined in file ly/grace-init.ly. By redefining them other effects may be obtained.

```
startAcciaccaturaMusic = {
  <>
  \override Flag.stroke-style = #'grace
  \slurDashed
}

stopAcciaccaturaMusic = {
  \revert Flag.stroke-style
  \slurSolid
  <>}
```

```
\relative c'' {
  \acciaccatura d8 c1
}
```
Positioning grace notes with floating space

Setting the property 'strict-grace-spacing' makes the musical columns for grace notes 'floating', i.e., decoupled from the non-grace notes: first the normal notes are spaced, then the (musical columns of the) graces are put left of the musical columns for the main notes.

\relative c' {  
  \override Score.SpacingSpanner.strict-grace-spacing = ##t  
  \new Staff \new Voice {  
    \afterGrace c4 { c16[ c8 c16] }  
    c8[ \grace { b16 d } c8]  
    c4 r  
  }  
  \new Staff {  
    c16 c c c c c c c4 r  
  }  
}

Notation Reference: [Scaling durations], page 56, [Manual beams], page 102.

Installed Files: 1y/grace-init.ly.

Snippets: Section “Rhythms” in Snippets.

Internals Reference: Section “GraceMusic” in Internals Reference, Section “Grace_beam_engraver” in Internals Reference, Section “Grace_auto_beam_engraver” in Internals Reference, Section “Grace_spacing_engraver” in Internals Reference.

Known issues and warnings

A multi-note beamed acciaccatura is printed without a slash, and looks exactly the same as a multi-note beamed appoggiatura.

Grace note synchronization can also lead to surprises. Staff notation, such as key signatures, bar lines, etc., are also synchronized. Take care when you mix staves with grace notes and staves without, for example,

<<  
  \new Staff \relative { e''4 \section \grace c16 d2. }  
  \new Staff \relative { e''4 \section d2. }  
>>
This can be remedied by inserting grace skips of the corresponding durations in the other staves. For the above example

```
<<
\new Staff \relative { e''4 \section \grace c16 d2. }
\new Staff \relative { c''4 \section \grace s16 d2. }
>>
```

Please make sure that you use the \grace command for the spacer part, even if the visual part uses \acciaccatura or \appoggiatura because otherwise an ugly slur fragment will be printed, connecting the invisible grace note with the following note.

Grace sections should only be used within sequential music expressions. Nesting or juxtaposing grace sections is not supported, and might produce crashes or other errors.

Each grace note in MIDI output has a length of 1/4 of its actual duration. If the combined length of the grace notes is greater than the length of the preceding note a “Going back in MIDI time” error will be generated. Either make the grace notes shorter in duration, for example:

```
c'8 \acciaccatura { c'8[ d' e' f' g'] }
```

becomes:

```
c'8 \acciaccatura { c'16[ d' e' f' g'] }
```

Or explicitly change the musical duration:

```
c'8 \acciaccatura { \scaleDurations 1/2 { c'8[ d' e' f' g'] } }
```

See [Scaling durations], page 56.

**Aligning to cadenzas**

In an orchestral context, cadenzas present a special problem: when constructing a score that includes a measured cadenza or other solo passage, all other instruments should skip just as many notes as the length of the cadenza, otherwise they will start too soon or too late.

One solution to this problem is to use the functions mmrest-of-length and skip-of-length. These Scheme functions take a defined piece of music as an argument and generate a multi-measure rest or \skip exactly as long as the piece.

```
MyCadenza = \relative {
  c'4 d8 e f g g4
  f2 g4 g
}
```
Another solution is to use the \skip command.

\skip = \fixed c' \{ \\
\repeat volta 2 \{ \\
  d8 e f g g4 f4 \\
\} \\
\} \\
\new Staff { \\
  \MyCadenza c'1 \\
\} \\
\new Staff { \\
  \MyCadenza c'1 \\
\}

\new Staff { \\
  \MyCadenza c'1 \\
\}

See also

Snippets: Section “Rhythms” in Snippets.
Time administration

Time is administered by the Timing_translator, which by default is to be found in the Score context. An alias, Timing, is added to the context in which the Timing_translator is placed. To ensure that the Timing alias is available, you may need to explicitly instantiate the containing context (such as Voice or Staff).

The following properties of Timing are used to keep track of timing within the score.

**currentBarNumber**

The current measure number. For an example showing the use of this property see [Bar numbers], page 116.

**measureLength**

The length of the measures in the current time signature. For a 4/4 time this is 1, and for 6/8 it is 3/4. Its value determines when bar lines are inserted and how automatic beams should be generated.

**measurePosition**

The point within the measure where we currently are. This quantity is reset by subtracting measureLength whenever measureLength is reached or exceeded. When that happens, currentBarNumber is incremented.

**timing**

If set to true, the above variables are updated for every time step. When set to false, the engraver stays in the current measure indefinitely.

Timing can be changed by setting any of these variables explicitly. In the next example, the default 4/4 time signature is printed, but measureLength is set to 5/4. At 4/8 through the third measure, the measurePosition is advanced by 1/8 to 5/8, shortening that bar by 1/8. The next bar line then falls at 9/8 rather than 5/4.

\new Voice \relative { 
\set Timing.measureLength = #(ly:make-moment 5/4) 
c'1 c4 | 
c1 c4 | 
c4 c 
\set Timing.measurePosition = #(ly:make-moment 5/8) 
b4 b b8 | 
c4 c1 | 
}

As the example illustrates, ly:make-moment n/m constructs a duration of n/m of a whole note. For example, ly:make-moment 1/8 is an eighth note duration and ly:make-moment 7/16 is the duration of seven sixteenths notes.

1.3 Expressive marks

RONDO

Allegro

This section lists various expressive marks that can be created in a score.

1.3.1 Expressive marks attached to notes

This section explains how to create expressive marks that are attached to notes: articulations, ornamentations, and dynamics. Methods to create new dynamic markings are also discussed.

Articulations and ornamentations

A variety of symbols that denote articulations, ornamentations, and other performance indications can be attached to a note using this syntax:

```
\relative {  
  \relative {  
    c'\staccato c\mordent b2\turn  
    c1\fermata  
  }  
}
```

Some of these articulations have shorthands for easier entry. Shorthands are appended to the note name, and their syntax consists of a dash - followed by a symbol signifying the articulation. Predefined shorthands exist for marcato, stopped, tenuto, staccatissimo, accent, staccato, and portato. Their corresponding output appears as follows:

```
\relative {  
}
```
The rules for the default placement of articulations are defined in \texttt{scm/script.scm}. Articulations and ornamentations may be manually placed above or below the staff; see Section 5.4.1 [Direction and placement], page 690.

The type of grob that an articulation creates depends on what it is attached to.

- On notes or ordinary rests, articulations create \texttt{Script} objects.
- On multi-measure rests, articulations create \texttt{MultiMeasureRestScript} objects.
- On \texttt{\caesura}, articulations create \texttt{CaesuraScript} objects.

```
\override Score.Script.color = #(universal-color 'vermillion)
\override Score.MultiMeasureRestScript.color = #(universal-color 'blue)
\override Score.CaesuraScript.color = #(universal-color 'orange)
```

In addition to articulations, text and markups can be attached to notes. See [Text scripts], page 277.

For more information about the ordering of \texttt{Script} and \texttt{TextScript} grobs that are attached to notes, see Section “Placement of objects” in \textit{Learning Manual}.

### Selected Snippets

**Modifying default values for articulation shorthand notation**

The shorthands are defined in \texttt{'ly/script-init.ly}, where the variables \texttt{dashHat}, \texttt{dashPlus}, \texttt{dashDash}, \texttt{dashBang}, \texttt{dashLarger}, \texttt{dashDot}, and \texttt{dashUnderscore} are assigned default values. The default values for the shorthands can be modified. For example, to associate the \texttt{-+} (\texttt{dashPlus}) shorthand with the \texttt{trill} symbol instead of the default \texttt{+} symbol, assign the value \texttt{/trill} to the variable \texttt{dashPlus}:

\begin{verbatim}
\relative c'' { c1-+ }
\end{verbatim}

\texttt{dashPlus} = \texttt{/trill}

\begin{verbatim}
\relative c'' { c1-+ }
\end{verbatim}

\texttt{dashPlus} = \texttt{/trill}

\begin{verbatim}
\relative c'' { c1-+ }
\end{verbatim}
Controlling the vertical ordering of scripts

The vertical ordering of scripts is controlled with the 'script-priority property. The lower this number, the closer it will be put to the note. In this example, the TextScript (the sharp symbol) first has the lowest priority, so it is put lowest in the first example. In the second, the prall trill (the Script) has the lowest, so it is on the inside. When two objects have the same priority, the order in which they are entered determines which one comes first.

```
\relative c'' {
  \once \override TextScript.script-priority = #-100
  a2^\prall^\markup { \sharp }

  \once \override Script.script-priority = #-100
  a2^\prall^\markup { \sharp }
}
```

Creating a delayed turn

Creating a delayed turn, where the lower note of the turn uses the accidental, requires several overrides. The outside-staff-priority property must be set to #f, as otherwise this would take precedence over the avoid-slur property. Changing the fraction 2/3 adjusts the horizontal position.

```
\relative c'' {
  \after 2*2/3 \turn c2( d4) r |
  \after 4 \turn c4.( d8)
  \after 4
  { 
    \once \set suggestAccidentals = ##t
    \once \override AccidentalSuggestion.outside-staff-priority = ##f
    \once \override AccidentalSuggestion.avoid-slur = #'inside
    \once \override AccidentalSuggestion.font-size = -3
    \once \override AccidentalSuggestion.script-priority = -1
    \once \hideNotes
cis8\turn \noBeam
  }
  d4.( e8)
}
```

See also

Notation Reference: [Text scripts], page 277, Section 5.4.1 [Direction and placement], page 690, Section A.15 [List of articulations], page 820, [Trills], page 163.
Dynamics

Absolute dynamic marks are specified using a command after a note, such as \c4\ff. The available dynamic marks are \ppppp, \pppp, \ppp, \pp, \pp, \mp, \mf, \f, \ff, \fff, \ffff, \fpp, \sf, \sff, \sp, \spp, \sfp, \sffz, \rfz, and \n. Dynamic marks may be manually placed above or below the staff; see Section 5.4.1 [Direction and placement], page 690.

A crescendo mark is started with \(< and terminated with \(!, an absolute dynamic, or an additional crescendo or decrescendo mark. A decrescendo mark is started with \(> and is also terminated with \(!, an absolute dynamic, or another crescendo or decrescendo mark. \cr and \endcr may be used instead of \(< and \(>; \enddecr and \enddecrecr may be used instead of \(! to end a crescendo or decrescendo mark, respectively. Hairpins are engraved by default using this notation.

A hairpin that is terminated with \(! will end at the right edge of the note that has the \(! assigned to it. In the case where it is terminated with the start of another crescendo or decrescendo mark, it will end at the center of the note that has the next \(< or \(> assigned to it. The next hairpin will then start at the right edge of the same note instead of the usual left edge had it been terminated with \(! before. A hairpin ending on a downbeat will stop at the preceding bar line.
Hairpins that are terminated with absolute dynamic marks instead of \! will also be engraved in a similar way. However, the length of the absolute dynamic itself can alter where the preceding hairpin ends.

\relative {
c''1< | c4 a c\mf a | c1< | c4 a c\fff a
}

Often, marks like crescendo or decrescendo should begin or end at some point of time during a sustained note. This can be achieved with \after, which can also be used to create delayed articulations or text scripts:

<<
\relative {
  \after 2 \< c'1
d4\f> e f g
  \after 2. \pp c,1
  \after 2. \fermata e
  \after 2. ^"Fine." f
}
\relative {
  \repeat unfold 12 c'4
c c c c\fermata
c c c c
}
>>

Multiple instances of \after can be used to engrave multiple marks on one note. This is particularly useful when adding a crescendo and decrescendo to the same note:

\relative {
c''4\< d\! e\> c\!
  \after 4 \< \after 2\> \after 2. \! f1
  \textLengthOn
  \after 4 \> \after 2. ^"hush!" c1
g4\pp
}
If the first in such a sequence of marks on a single note is supposed to coincide with the onset of the note, it is convenient to attach it to an empty chord <>. This way, all marks can be entered in their natural visual order:

\{
<>\% \after 4 \after 2 \! c'1
% easier to write and read than:
\after 4 \after 2 \! c'1<
\}

The \espressivo command can also be used to indicate a crescendo and decrescendo on the same note. However, be warned that this is implemented as an articulation, not a dynamic.

\relative {  
c''2 b4 a  
g4\espressivo  
\after 2. \espressivo c  
}

Textual crescendo marks begin with \cresc. Textual decrescendos begin with \decresc or \dim. Extender lines are engraved as required.

\relative {  
g'8\cresc a b c b c d e\! mf  
f8\decresc e d c e\! d c b  
a1\dim ~  
a2. r4\!  
}

Textual marks for dynamic changes can also replace hairpins:

\relative c' {  
\crescTextCresc  
c4\! < d e f\!  
\dimTextDecresc  
g4\> e d c\!  
\dimTextDecr  
e4\> d c b\!  
\dimTextDim  
}
To create new absolute dynamic marks or text that should be aligned with dynamics, see [New dynamic marks], page 147.

Vertical positioning of dynamics is handled by Section “DynamicLineSpanner” in Internals Reference.

A Dynamics context is available to engrave dynamics on their own horizontal line. Use spacer rests to indicate timing. (Notes in a Dynamics context will also take up musical time, but will not be engraved.) The Dynamics context can usefully contain some other items such as text scripts, text spanners, and piano pedal marks.

Predefined commands
\dynamicUp, \dynamicDown, \dynamicNeutral, \crescTextCresc, \dimTextDim, \dimTextDecr, \dimTextDecresc, \crescHairpin, \dimHairpin.

Selected Snippets

Setting hairpin behavior at bar lines

If the note which ends a hairpin falls on a downbeat, the hairpin stops at the bar line immediately preceding. This behavior can be controlled by overriding the ‘to-barline’ property.

\relative c'' {
  e4\< e2.
  e1!\ 
  \override Hairpin.to-barline = ##f
Setting the minimum length of hairpins

If hairpins are too short, they can be lengthened by modifying the minimum-length property of the Hairpin object.

```plaintext
<<
\after 4 \< \after 2 \> \after 2. \! f'1
\override Hairpin.minimum-length = #8
\after 4 \< \after 2 \> \after 2. \! f'1
}
{\repeat unfold 8 c'4
}
>>
```

Aligning the ends of hairpins to NoteColumn directions

The ends of hairpins may be aligned to the LEFT, CENTER or RIGHT of NoteColumn grobs by overriding the property endpoint-alignments, which is a pair of numbers representing the left and right ends of the hairpin. endpoint-alignments are expected to be directions (either -1, 0 or 1). Other values will be transformed with a warning. The right end of a hairpin terminating at a rest is not affected, always ending at the left edge of the rest.

```plaintext
{c'2\< <c' d'>\! | \override Hairpin.endpoint-alignments = #'(1 . -1)
c'2\< <c' d'>\! | \override Hairpin.endpoint-alignments = #'(LEFT . CENTER)
c'2\< <c' d'>\! |}
```

Moving the ends of hairpins

The ends of hairpins may be offset by setting the shorten-pair property of the Hairpin object. Positive values move endpoints to the right, negative to the left. Unlike the minimum-length
property, this property only affects the appearance of the hairpin; it does not adjust horizontal spacing (including the position of bounding dynamics). This method is thus suitable for fine-tuning a hairpin within its allotted space.

```latex
\once \override Hairpin.shorten-pair = #'(2 . 2)
\once \override Hairpin.shorten-pair = #'(-2 . -2)
c'1-\< c'2- \p-\tweak shorten-pair #'(2 . 0)\< c'2- c'\!\\fff
```

**Printing hairpins using al niente notation**

Hairpin dynamics may be printed with a circled tip (“al niente” notation) by setting the circled-tip property of the Hairpin object to #t.

```latex
\relative c'' {
  \override Hairpin.circled-tip = ##t
  c2\< c\! c4\> c\< c2\!
}
```

**Printing hairpins in various styles**

Hairpin dynamics may be created in a variety of styles.

```latex
\relative c'' {
  \override Hairpin.stencil = #flared-hairpin
  a4\< a a a\f
  a4\p\< a a a\fff
  a4\sfz\< a a a\!
  \override Hairpin.stencil = #constante-hairpin
  a4\< a a a\f
  a4\p\< a a a\fff
  a4\sfz\< a a a\!
  \override Hairpin.stencil = #flared-hairpin
  a4\> a a a\f
  a4\p\> a a a\fff
  a4\sfz\> a a a\!
  \override Hairpin.stencil = #constante-hairpin
  a4\> a a a\f
```
Vertically aligned dynamics and textscripts

All DynamicLineSpanner objects (hairpins and dynamic texts) are placed with their reference line at least ‘staff-padding from the staff, unless other notation forces them to be farther. Setting ‘staff-padding to a sufficiently large value aligns the dynamics.

The same idea, together with \textLengthOn, is used to align the text scripts along their baseline.

```latex
\begin{verbatim}
music = \relative c' {
  a'2\p b\f
  e4\p f/f\> g, b\p
  c2\markup { \huge gorgeous } c-\markup { \huge fantastic }
}

{ \music \break \override DynamicLineSpanner.staff-padding = #3 \textLengthOn \override TextScript.staff-padding = #1 \music }
\end{verbatim}
```

Hiding the extender line for text dynamics

Text style dynamic changes (such as cresc. and dim.) are printed with a dashed line showing their extent. This line can be suppressed in the following way:

```latex
\begin{verbatim}
\relative c'’ {
  \override DynamicTextSpanner.style = #'none \crescTextCresc
}
\end{verbatim}
```
Changing text and spanner styles for text dynamics

The text used for crescendos and decrescendos can be changed by modifying the context properties crescendoText and decrescendoText.

The style of the spanner line can be changed by modifying the 'style property of DynamicTextSpanner. The default value is 'dashed-line, and other possible values include 'line, 'dotted-line and 'none.

```
\relative c' {
  \set crescendoText = \markup \italic { cresc. poco }
  \set crescendoSpanner = #'text
  \override DynamicTextSpanner.style = #'dotted-line
  a2\< a
  a2 a
  a2 a\mf
}
```

Snippets: Section “Expressive marks” in Snippets.

New dynamic marks

The easiest way to create dynamic indications is to use \markup objects.

```
\set \relative { moltoF = \markup { molto \dynamic f } }
```

```
\relative {
  <d' e>16\moltoF <d e>
  <d e>2..
}
```
In markup mode, editorial dynamics (within parentheses or square brackets) can be created. The syntax for markup mode is described in Section 1.8.2 [Formatting text], page 287.

\begin{verbatim}
roundF = \markup { \
   \center-align \concat { \bold { \italic ( } \\
   \dynamic f \bold { \italic ) } } } \\
boxF = \markup { \bracket { \dynamic f } } \\
\relative { \c'1 \roundF \\
c1 \boxF }
\end{verbatim}

Simple, centered dynamic marks are easily created with the make-dynamic-script function.

\begin{verbatim}
sfzp = #(make-dynamic-script "sfzp") \\
\relative { \c'4 c c \sfzp c }
\end{verbatim}

In general, make-dynamic-script takes any markup object as its argument. The dynamic font only contains the characters f, m, p, r, s and z, so if a dynamic mark that includes plain text or punctuation symbols is desired, markup commands that reverts font family and font encoding to normal text should be used, for example \normal-text. The interest of using make-dynamic-script instead of an ordinary markup is ensuring the vertical alignment of markup objects and hairpins that are attached to the same note head.

\begin{verbatim}
roundFdynamic = #(make-dynamic-script roundF) \\
boxFdynamic = #(make-dynamic-script boxF) \\
mfEspressDynamic = #(make-dynamic-script mfEspress) \\
\relative { \c'4 \roundFdynamic \< d e f \\
g1 \boxFdynamic \> \\
g1}
\end{verbatim}
The Scheme form of markup mode may be used instead. Its syntax is explained in Section “Markup construction in Scheme” in *Extending*.

```
moltoF = #(make-dynamic-script
            (markup #:normal-text "molto"
                    #:dynamic "f"))
```

```
\relative {
    <d' e>16 <d e>
    <d e>2..\moltoF
}
```

To left-align the dynamic text rather than centering it on a note use a \tweak:

```
moltoF = \tweak DynamicText.self-alignment-X #LEFT
        #(make-dynamic-script
            (markup #:normal-text "molto"
                    #:dynamic "f"))
```

Font settings in markup mode are described in [Selecting font and font size], page 291.

Snippets: Section “Expressive marks” in *Snippets*.

### 1.3.2 Expressive marks as curves

This section explains how to create various expressive marks that are curved: normal slurs, phrasing slurs, breath marks, falls, and doits.
Slurs

Slurs are entered using parentheses:

\relative {
  f'4( g a) a8 b(
  a4 g2 f4)
  <c e>2( <b d>2)
}

Note: In polyphonic music, a slur must be terminated in the same voice it began.

Slurs may be manually placed above or below the staff; see Section 5.4.1 [Direction and placement], page 690.

Simultaneous or overlapping slurs require special attention. Most occurrences of outer slurs actually indicate phrasing, and phrasing slurs may overlap a regular slur, see [Phrasing slurs], page 152. When multiple regular slurs are needed in a single voice, matching slur starts and ends need to be labelled by preceding them with \= followed by an identifying key (a symbol or non-negative integer).

\fixed c' {
  <c- f\#1( g\#2( >2 <c e\#1) a\#2) >
}

Slurs can be solid, dotted, or dashed. Solid is the default slur style:

\relative {
  c'4( e g2)
  \slurDashed
  g4( e c2)
  \slurDotted
  c4( e g2)
  \slurSolid
  g4( e c2)
}

Slurs can also be made half-dashed (the first half dashed, the second half solid) or half-solid (the first half solid, the second half dashed):

\relative {
  c'4( e g2)
  \slurHalfDashed

Custom dash patterns for slurs can be defined:

\begin{verbatim}
\relative {
\set doubleSlurs = \relative c' 4 \( <c e> 4 \( <d f> <c e> <d f> \))
\set \override TextScript.avoid-slur = \hspace{1em} \text{inside}
\set \override TextScript.outside-staff-priority = \hspace{1em} \text{false}
\markup { \halign { \natural } d4.}
\end{verbatim}

\begin{verbatim}
\relative c' 4 \( <c e> 4 \( <d f> <c e> <d f> \))
\set \override TextScript.avoid-slur = \hspace{1em} \text{inside}
\set \override TextScript.outside-staff-priority = \hspace{1em} \text{false}
\markup { \halign { \natural } d4.}
\end{verbatim}

Selected Snippets

\textit{Using double slurs for legato chords}

Some composers write two slurs when they want legato chords. This can be achieved by setting doubleSlurs.

\begin{verbatim}
\relative c' 4 \( <c e> 4 \( <d f> <c e> <d f> \))
\set \override TextScript.avoid-slur = \hspace{1em} \text{inside}
\set \override TextScript.outside-staff-priority = \hspace{1em} \text{false}
\markup { \halign { \natural } d4.}
\end{verbatim}

\begin{verbatim}
\relative c' 4 \( <c e> 4 \( <d f> <c e> <d f> \))
\set \override TextScript.avoid-slur = \hspace{1em} \text{inside}
\set \override TextScript.outside-staff-priority = \hspace{1em} \text{false}
\markup { \halign { \natural } d4.}
\end{verbatim}

\textit{Positioning text markups inside slurs}

Text markups need to have the outside-staff-priority property set to false in order to be printed inside slurs.

\begin{verbatim}
\relative c' 4 \( <c e> 4 \( <d f> <c e> <d f> \))
\set \override TextScript.avoid-slur = \hspace{1em} \text{inside}
\set \override TextScript.outside-staff-priority = \hspace{1em} \text{false}
\markup { \halign { \natural } d4.}
\end{verbatim}

\begin{verbatim}
\relative c' 4 \( <c e> 4 \( <d f> <c e> <d f> \))
\set \override TextScript.avoid-slur = \hspace{1em} \text{inside}
\set \override TextScript.outside-staff-priority = \hspace{1em} \text{false}
\markup { \halign { \natural } d4.}
\end{verbatim}
Making slurs with complex dash structure

Slurs can be made with complex dash patterns by defining the dash-definition property. dash-definition is a list of dash-elements. A dash-element is a list of parameters defining the dash behavior for a segment of the slur.

The slur is defined in terms of the bezier parameter \( t \) which ranges from 0 at the left end of the slur to 1 at the right end of the slur. dash-element is a list (start-t stop-t dash-fraction dash-period). The region of the slur from start-t to stop-t will have a fraction dash-fraction of each dash-period black. dash-period is defined in terms of staff spaces. dash-fraction is set to 1 for a solid slur.

\[
\textbf{\texttt{\relative c' \{}}
\]
\[
\textbf{\once \override Slur.dash-definition = \#'(0 0.3 0.1 0.75)}
\]
\[
(0.3 0.6 1 1)
\]
\[
(0.65 1.0 0.4 0.75))
\]

\[
c4( d e f)
\]
\[
\textbf{\once \override Slur.dash-definition = \#'(0 0.25 1 1)}
\]
\[
(0.3 0.7 0.4 0.75)
\]
\[
(0.75 1.0 1 1))
\]

\[
c4( d e f)
\]
\[
\textbf{\}}
\]

See also

Notation Reference: Section 5.4.1 [Direction and placement], page 690, [Phrasing slurs], page 152.

Snippets: Section “Expressive marks” in Snippets.

Internals Reference: Section “Slur” in Internals Reference.

Phrasing slurs

Phrasing slurs (or phrasing marks) that indicate a musical sentence are written using the commands \( ( \) and \( ) \) respectively:

\[
\textbf{\relative c'4\{ d( e) f(}
\]
\[
e2) d)}
\]

\[
\textbf{\}}
\]
Typographically, a phrasing slur behaves almost exactly like a normal slur. However, they are treated as different objects; a \slurUp will have no effect on a phrasing slur. Phrasing may be manually placed above or below the staff; see Section 5.4.1 [Direction and placement], page 690.

Simultaneous or overlapping phrasing slurs are entered using \= as with regular slurs, see [Slurs], page 150.

Phrasing slurs can be solid, dotted, or dashed. Solid is the default style for phrasing slurs:

\relative {
  c'4\( e \ g2\)
  \phrasingSlurDashed
  g4\( e \ c2\)
  \phrasingSlurDotted
  c4\( e \ g2\)
  \phrasingSlurSolid
  g4\( e \ c2\)
}

Phrasing slurs can also be made half-dashed (the first half dashed, the second half solid) or half-solid (the first half solid, the second half dashed):

\relative {
  c'4\( e \ g2\)
  \phrasingSlurHalfDashed
  g4\( e \ c2\)
  \phrasingSlurHalfSolid
  c4\( e \ g2\)
  \phrasingSlurSolid
  g4\( e \ c2\)
}

Custom dash patterns for phrasing slurs can be defined:

\relative {
  c'4\( e \ g2\)
  \phrasingSlurDashPattern #0.7 #0.75
  g4\( e \ c2\)
  \phrasingSlurDashPattern #0.5 #2.0
  c4\( e \ g2\)
  \phrasingSlurSolid
  g4\( e \ c2\)
}
Dash pattern definitions for phrasing slurs have the same structure as dash pattern definitions for slurs. For more information about complex dash patterns, see the snippets under [Slurs], page 150.

**Predefined commands**

\phrasingSlurUp, \phrasingSlurDown, \phrasingSlurNeutral, \phrasingSlurDashed, \phrasingSlurDotted, \phrasingSlurHalfDashed, \phrasingSlurHalfSolid, \phrasingSlurDashPattern, \phrasingSlurSolid.

**See also**

Notation Reference: Section 5.4.1 [Direction and placement], page 690, [Slurs], page 150.

Snippets: Section “Expressive marks” in Snippets.

Internals Reference: Section “PhrasingSlur” in Internals Reference.

**Breath marks**

The \breathe command calls for the performer to shorten the previous note to take a breath.

\fixed c’’ { c.2. \breathe d4 }

For a short break in sound that is not taken away from the previous note, see [Caesuras], page 70. Unlike other expressive marks, a breath mark is treated as a separate music event; therefore, any expressive marks pertaining to the preceding note, and any brackets indicating manual beams, slurs, or phrasing slurs, must be placed before \breathe. \breathe does not accept articulations itself, but see [Caesuras], page 70.

A breath mark ends an automatic beam; to override this, see [Manual beams], page 102.

\fixed c’’ { c8 \breathe d e f g2 }

The breathMarkType context property controls which of several predefined breath marks the \breathe command creates. See Section A.16 [List of breath marks], page 822.

\fixed c’’ {
  \set breathMarkType = #'tickmark
  c2. \breathe d4
}

The breathMarkType context property controls which of several predefined breath marks the \breathe command creates. See Section A.16 [List of breath marks], page 822.
See also
Notation Reference: [Caesuras], page 70, [Divisiones], page 503.
Snippets: Section “Expressive marks” in Snippets.

Falls and doits

Falls and doits can be added to notes using the \bendAfter command. The direction of the fall or doit is indicated with a plus or minus (up or down). The number indicates the pitch interval that the fall or doit will extend beyond the main note.

\relative c' { c2\bendAfter #+4 c2\bendAfter #-4 c2\bendAfter #+6.5 c2\bendAfter #-6.5 c2\bendAfter +#8 c2\bendAfter #^-8 }

Selected Snippets

Adjusting the shape of falls and doits

The shortest-duration-space property may be tweaked to adjust the shape of falls and doits.

\relative c' { \override Score.SpacingSpanner.shortest-duration-space = #4.0 c2~\bendAfter #5 c2~\bendAfter #^-4.75 c2~\bendAfter #8.5 c2~\bendAfter #^-6 }

See also
Snippets: Section “Expressive marks” in Snippets.

1.3.3 Expressive marks as lines

This section explains how to create various expressive marks that follow a linear path: glissandos, arpeggios, and trills.
Glissando

A glissando is created by appending \glissando to a note:

```
\relative {
  g'2\glissando g'
c2\glissando c,
\afterGrace f,1\glissando f'16
}
```

A glissando can connect notes across staves:

```
\new PianoStaff <<
\new Staff = "right" {
  e'''2\glissando
  \change Staff = "left"
  a,,4\glissando
  \change Staff = "right"
  b''8 r |
}
\new Staff = "left" {
  \clef bass
  s1
}
>>
```

A glissando can connect notes in chords. If anything other than a direct one-to-one pairing of the notes in the two chords is required, the connections between the notes are defined by setting \glissandoMap to a Scheme list. The elements are pairs of integers; each pair (x . y) creates a glissando line from the x-th note of the first chord to the y-th note of the second chord. Notes are numbered from zero in the order in which they appear in the input .ly file. Not all notes need be part in a glissando.

```
\relative {
  <c' e>2\glissando g'
  <c, e>\glissando <g' b>
  \break
  \set glissandoMap = #'((0 . 1) (1 . 0))
  <c, g'>\glissando <d a '>
  \set glissandoMap = #'((0 . 0) (0 . 1) (0 . 2))
  c\glissando <d f a>
  \set glissandoMap = #'((2 . 2) (0 . 0))
  <f d a'>\glissando <c f c'>
```
Different styles of glissandi can be created. For details, see Section 5.4.5 [Line styles], page 698.

**Selected Snippets**

**Contemporary glissando**

A contemporary glissando without a final note can be typeset using a hidden note and cadenza timing.

```
\relative c' { 
\time 3/4 
\override Glissando.style = #'zigzag 
c4 c 
\cadenzaOn 
c4\glissando 
\hideNotes 
c,,4 
\unHideNotes 
\cadenzaOff 
\bar "|"
}
```

**Adding timing marks to long glissandi**

Skipped beats in very long glissandi are sometimes indicated by timing marks, often consisting of stems without noteheads. Such stems can also be used to carry intermediate expression markings.

If the stems do not align well with the glissando, they may need to be repositioned slightly.

```
glissandoSkipOn = { 
\override NoteColumn.glissando-skip = ##t 
\hide NoteHead 
\override NoteHead.no-ledgers = ##t 
}
```

```
glissandoSkipOff = { 
\revert NoteColumn.glissando-skip 
\undo \hide NoteHead 
\revert NoteHead.no-ledgers 
}
```
Making glissandi breakable

Setting the breakable property to #t in combination with after-line-breaking allows a glissando to break if it occurs at a line break:

```latex
\relative c' {
  r8 f8\glissando
  \glissandoSkipOn
  f4 g a a8\noBeam
  \glissandoSkipOff
  a8

  r8 f8\glissando
  \glissandoSkipOn
  g4 a8
  \glissandoSkipOff
  a8 |

  r4 f\glissando \<
  \glissandoSkipOn
  a4\f \>
  \glissandoSkipOff
  b8! r |
}

\relative c' {
  \override NoteColumn.glissando-skip = ##t
  \hide NoteHead
  \override NoteHead.no-ledgers = ##t
}
```

```latex
\relative c' {
  \override Glissando.breakable = ##t
  \override Glissando.after-line-breaking = ##t
  f1\glissando |
  \break
  a4 r2. |
  f1\glissando
  \once \glissandoSkipOn
  \break
  a2 a4 r4 |
}
```
Extending glissandi across repeats

A glissando which extends into several \alternative blocks can be simulated by adding a hidden grace note with a glissando at the start of each \alternative block. The grace note should be at the same pitch as the note which starts the initial glissando. This is implemented here with a music function which takes the pitch of the grace note as its argument.

Note that in polyphonic music the grace note must be matched with corresponding grace notes in all other voices.

```latex
\definemusicfunction repeatGliss = \define-music-function (\grace)
(\ly:pitch?)
#\%
\once \override \Glissando.springs-and-rods = \ly:spanner::set-spacing-rods
\once \override \Glissando.minimum-length = #3.5
\once \hideNotes
\grace \grace \glissando
#})

\score {
  \relative c'' {
    \repeat volta 3 { c4 d e f\glissando }
    \alternative {
      \g2 \d
      \repeatGliss f g2 e
      \repeatGliss f e2 d
    }
  }
}

music = \relative c' {
  \voiceOne
  \repeat volta 2 {
    \g a b \c\glissando
  }
  \alternative {
    \d1
    \repeatGliss c \omit StringNumber e1\2
  }
}

\score {
  \new StaffGroup <<
```
\new Staff <<
    \new Voice { \clef "G_8" \music }
>>
\new TabStaff <<
    \new TabVoice { \clef "moderntab" \music }
>>
}

See also
Notation Reference: Section 5.4.5 [Line styles], page 698.
Snippets: Section “Expressive marks” in Snippets.
Internals Reference: Section “Glissando” in Internals Reference.

Known issues and warnings
Printing text over the line (such as gliss.) is not supported.

Arpeggio
An arpeggio on a chord (also known as a broken chord) is denoted by appending \arpeggio to the chord construct:
\relative { <c' e g c>\arpeggio }

Different types of arpeggios may be written. \arpeggioNormal reverts to a normal arpeggio:
\relative {
    <c' e g c>2\arpeggio
    \arpeggioArrowUp
    <c e g c>2\arpeggio
    \arpeggioArrowDown
    <c e g c>2\arpeggio
    \arpeggioNormal
These predefined commands internally modify the arpeggio-direction property; see their full definition in the ly/property-init.ly file.

Special bracketed arpeggio symbols can be created:

\relative {
  <c' e g c>2
  \arpeggioBracket
  <c e g c>2\arpeggio
  \arpeggioParenthesis
  <c e g c>2\arpeggio
  \arpeggioParenthesisDashed
  <c e g c>2\arpeggio
  \arpeggioNormal
  <c e g c>2\arpeggio
}

These predefined commands internally override the Arpeggio object’s stencil property, and may also adapt its X-extent (that is, the horizontal dimension it takes not to collide with other objects).

The dash properties of the parenthesis arpeggio are controlled with the dash-definition property (see [Slurs], page 150).

Arpeggios can be explicitly written out with ties. For more information, see [Ties], page 58.

Predefined commands
\arpeggio, \arpeggioArrowUp, \arpeggioArrowDown, \arpeggioNormal, \arpeggioBracket, \arpeggioParenthesis, \arpeggioParenthesisDashed.

Selected Snippets

**Creating cross-staff arpeggios in a piano staff**

In a PianoStaff, it is possible to let an arpeggio cross between the staves by setting the property PianoStaff.connectArpeggios.

\new PianoStaff \relative c'' <<
  \set PianoStaff.connectArpeggios = ##t
  \new Staff {
    <c e g c>4\arpeggio
    <g c e g>4\arpeggio
    <e g c e>4\arpeggio
  }
Creating cross-staff arpeggios in other contexts

Cross-staff arpeggios can be created in contexts other than GrandStaff, PianoStaff and StaffGroup if the Span_arpeggio_ engraver is included in the Score context.

\score {\new ChoirStaff {\set Score.connectArpeggios = ##t << \new Voice \relative c' {<c e>2\arpeggio <d f>2\arpeggio <c e>1\arpeggio } \new Voice \relative c {\clef bass <c g'>2\arpeggio <b g'>2\arpeggio <c g'>1\arpeggio } >> \layout {\context {\Score \consists "Span_arpeggio_ engraver" } } } }
### Creating arpeggios across notes in different voices

An *arpeggio* can be drawn across notes in different voices on the same staff if the `Span_arpeggio_engraver` is added to the `Staff` context:

```latex
\new Staff \with {
  \consists "Span_arpeggio_engraver"
}
\relative c' {
  \set Staff.connectArpeggios = ##t
  <<
  { <e' g>4\arpeggio <d f> <d f>2 }
  \\}
  { <d, f>2\arpeggio <g b>2 }
  >>
}
```

See also

Notation Reference: [Slurs], page 150, [Ties], page 58.
Installed Files: ly/property-init.ly.
Snippets: Section “Expressive marks” in *Snippets*.

**Known issues and warnings**

Predefined commands such as `\arpeggioArrowUp` only apply to the current context, and thus will not affect arpeggios spanning several voices or staves. In such cases, these commands need to be used in a `\context` block within `\layout`, or in a `\with` block, as explained in Section 5.1.5 [Changing context default settings], page 664. Alternatively, rather than using predefined shortcuts, it may be advisable to directly override the relevant properties for the `Arpeggio` object in the appropriate context; for example:

```latex
\override Staff.Arpeggio.stencil = #ly:arpeggio::brew-chord-bracket
to print cross-voice arpeggio brackets at the Staff level, or
\override PianoStaff.Arpeggio.arpeggio-direction = #UP
to print cross-staff arrowed arpeggios (pointing upwards) in a PianoStaff context.
```

It is not possible to mix connected arpeggios and unconnected arpeggios in one PianoStaff at the same point in time.

The simple way of setting parenthesis-style arpeggio brackets does not work for cross-staff arpeggios; see [Staff-change lines], page 382.

**Trills**

Short trills without an extender line are printed with `\trill`; see [Articulations and ornaments], page 137.

Longer trills with an extender line are made with `\startTrillSpan` and `\stopTrillSpan`:

```latex
\relative {
```
A trill spanner crossing a line break will restart exactly above the first note on the new line.

Consecutive trill spans will work without explicit \stopTrillSpan commands, since successive trill spanners will automatically become the right bound of the previous trill.

Trills can also be combined with grace notes. The syntax of this construct and the method to precisely position the grace notes are described in [Grace notes], page 129.
Trills that require an auxiliary note with an explicit pitch can be typeset with the \pitchedTrill command. The first argument is the main note, and the second is the trilled note, printed as a stemless note head in parentheses.

\relative {\pitchedTrill d''2\startTrillSpan fis d2\stopTrillSpan r2}

The Accidental of the first pitched trill in a measure is always printed, even for naturals.

\relative {\key d \major \pitchedTrill d'2\startTrillSpan cis d\stopTrillSpan \pitchedTrill d2\startTrillSpan c d\stopTrillSpan \pitchedTrill d2\startTrillSpan e d\stopTrillSpan}

Subsequent accidentals (of the same note in the same measure) will need to be added manually.

\relative {\pitchedTrill eis''4\startTrillSpan fis eis4\stopTrillSpan \pitchedTrill eis4\startTrillSpan cis eis4\stopTrillSpan \pitchedTrill eis4\startTrillSpan fis eis4\stopTrillSpan \pitchedTrill eis4\startTrillSpan fis eis4\stopTrillSpan}

Predefined commands
\startTrillSpan, \stopTrillSpan.
See also
Notation Reference: [Articulations and ornamentations], page 137, [Grace notes], page 129.
Snippets: Section “Expressive marks” in *Snippets*.

1.4 Repeats

Repetition is a central concept in music, and multiple notations exist for repetitions. LilyPond supports the following kinds of repeats:

**volta** This is the standard notation for repeats with or without alternative endings. The repeated section is framed between repeat bar lines, but the starting bar line is omitted when the repeated section begins the piece. Alternative endings are printed in sequence, bracketed, and numbered with the volte to which they apply.

**segno** This supports various *da capo* and *dal segno* cases. The repeated section begins with a segno mark, except at the start of the piece. Alternative endings are printed in sequence and marked with coda marks, and a section label such as ‘Coda’ can optionally be applied to the final alternative. The repeated section ends with an instruction such as *D.S.*

**unfold** The repeated music is written out in full a specified number of times.

**percent** These are beat or measure repeats. They look like single slashes or percent signs.

**tremolo** This is used to write tremolo beams.

Chord constructs can be repeated using the chord repetition symbol, q. See [Chord repetition], page 191.

1.4.1 Long repeats
This section discusses how to input long (usually multi-measure) repeats.
**Written-out repeats**

The \repeat unfold command repeats music by writing it out a number of times. The syntax is the same as the \repeat volta and \repeat segno commands, which are documented in following sections.

To avoid redundancy, unfolding is not demonstrated in detail here; however, some of the examples in following sections illustrate repeats in multiple forms using the \unfoldRepeats command to convert the volta or segno form to the unfold form. For another important use of the \unfoldRepeats command, see Section 3.6.6 [Using repeats with MIDI], page 589.

There are some points of interest specific to the \repeat unfold command.

In some cases, especially in a \relative context, the outcome of unfolding is not the same as of writing the input music expression multiple times, e.g.,

\begin{verbatim}
\repeat unfold 2 { a'4 b c d | }
\end{verbatim}

differs from the following by an octave change:

\begin{verbatim}
a'4 b c d |
a'4 b c d |
\end{verbatim}

Also, nesting \repeat unfold can be practical in ways that nesting \repeat volta or \repeat segno would not be.

> Note: If you include \relative inside a \repeat without explicitly instantiating the Voice context, extra (unwanted) staves will appear. See Section “An extra staff appears” in Application Usage.

**See also**

Snippets: Section “Repeats” in Snippets.

**Simple repeats**

This is the syntax for a repeat without variation:

\begin{verbatim}
\repeat volta repeatcount musicexpr
\end{verbatim}

where musicexpr is the music expression to be repeated.

\begin{verbatim}
\fixed c'' {
  \repeat volta 2 { c2 f }
  R1
  \repeat volta 2 { g2 c }
}
\end{verbatim}

By default, a starting bar line is not automatically printed at the beginning of a piece, in accordance with classical engraving conventions. However, in some contexts, these bar lines are traditionally added, such as in lead sheets for jazz standards. This can be achieved by setting the printInitialRepeatBar property.

\begin{verbatim}
\fixed c'' {
  \set Score.printInitialRepeatBar = ##t
  \repeat volta 2 { c2 f }
}\end{verbatim}
A repeated section that starts in the middle of a measure usually ends at the same position in a later measure so that the two ends make a complete measure. The repeat bar lines are not measure boundaries in such cases, so no bar checks should be placed there. Likewise, no \partial command should be placed within the repeated music, because the measures are complete; however, a \partial command should be placed before the repeat when there is a truly incomplete measure the first time through.

\fixed c'\prime \{ \\
\partial 4 \\
\repeat volta 2 \{ \\
c4 \\
c2 d \\
g4 g g \\
\} \\
\repeat volta 2 \{ \\
e4 \\
f2 g \\
c2. \\
\} \\
\}

Alternative endings

Repeats with alternative endings can be written two ways. This is the preferred syntax:

\repeat volta repeatcount \{ \\
musicexpr... \\
\alternative \{ \\
\volta numberlist musicexpr \\
\volta numberlist musicexpr \\
\alternative { \\
\volta numberlist musicexpr \\
\volta numberlist musicexpr \\
\} \\
\}

where musicexpr is a music expression, musicexpr... is any number of them, and numberlist is a comma-separated list of volta numbers chosen from the range 1 to repeatcount.

\fixed c'\prime \{ \\
\repeat volta 6 \{ \\
c4 d e f \\
\alternative \{ \\
\volta 1,2,3 \{ c2 e \} \\
\volta 4,5 \{ f2 d \} \\
\volta 6 \{ e2 f \} \\
\}

\}

c1
An older syntax where the `\alternative` block follows outside the repeated music expression is still supported and has the same effect.

```latex
\repeat volta repeatcount musicexpr
\alternative {
  \volta numberlist musicexpr
  \volta numberlist musicexpr
  ...}
\volta specifications within an `\alternative` block are optional on an all-or-none basis. If they are omitted, alternatives are used once each, but the first is repeated as needed to satisfy the repeat count.

\fixed c' { \repeat volta 6 { c4 d e f \alternative {
  \volta 2 \alternative {
    \volta 3 { e2 f }
    \volta 3 { d2 c }
  }
}
c1}
```

`\alternative` blocks can be nested.

```latex
music = \fixed c' { \repeat volta 3 { s1_"A"
\alternative {
  \volta 1 { s1_"B" }
  \volta 2,3 { s1_"C"
    \once \set Score.voltaSpannerDuration = #(ly:make-moment 1)
    s1_"D"
  }
  \alternative {
    \volta 2 { s1_"E" }
    \volta 3 { s1_"F" }
  }
}
}
\fine
```
Other variation in repeated sections

An \alternative block can be used within a \repeat block to produce notation similar to alternative endings (see [Alternative endings], page 168).

\fixed c'' { 
  \repeat volta 2 { 
    R1 
    \alternative { 
      \volta 1 { c1 } 
      \volta 2 { d1 } 
    } 
    R1 
  } 
}

The \volta command is not limited to use on the elements of an \alternative block. It can be used anywhere within a \repeat to designate music for particular volte, though it does not create brackets in other cases.

When a \repeat is unfolded, volta-specific music is omitted from every volta to which it does not apply. Providing an empty Scheme list in place of volta numbers removes the music entirely.

\music = \repeat volta 3 {
When a \repeat is unfolded, it may be desirable not only to filter out volta-specific music, but also to add music that was not present in the folded form. The \unfolded command designates music to be ignored until the enclosing \repeat is unfolded.

\begin{verbatim}
\score { \music }
\score { \unfoldRepeats \music }

% 3\times
\begin{music}
\repeat volta 2 {
 c1
 <<
 \volta #'() {
 \once \override TextSpanner.bound-details.left.text = "2nd time tacet"
 s4*7\startTextSpan s4\stopTextSpan
 } 
\volta 1 { f4 f f f | f f f f }
\volta 2 { \unfolded { R1*2 } }
 >>
 c'1
 }
\fine
}
\end{music}

\score { \music }
\score { \unfoldRepeats \music }

\end{verbatim}

Note: The \volta and \unfolded commands function with respect to the innermost repeat enclosing them.
Al-fine repeats

The \fine command marks the end of the music but does not enforce it. When a repeat containing \fine is unfolded, the \fine command is unfolded like any other music. For correct unfolding, it is necessary to specify the volta in which the \textit{Fine} should be performed and the volta in which any following music should be performed (see [Other variation in repeated sections], page 170).

\begin{verbatim}
\begin{music}
\\fixed c' \\{ \\
\\\repeat volta 2 \{ \\
\\\\f1 \\
\\\\\volta 2 \\fine \\
\\\\\volta 1 b1
\}\}
\end{music}
\end{verbatim}

As shown immediately above, at the written end of the music, \fine creates a final bar line without a \textit{Fine} instruction. To force \textit{Fine} to appear in such cases, set the finalFineTextVisibility context property.

\begin{verbatim}
\fixed c' \{ \\
\\set Score.finalFineTextVisibility = ##t \\
\f1 \\
\\fine
\}
\end{verbatim}

To change the text that \fine prints, set the fineText context property.

\begin{verbatim}
\fixed c' \{ \\
\\set Score.fineText = "Fine."
\\repeat volta 2 \{ \\
\\\f1 \\
\\\\volta 2 \\fine \\
\\\\\volta 1 b1
\}\}
\end{verbatim}

For details on interactions with other types of bar lines and options for changing their appearance, see [Automatic bar lines], page 114.
See also
Music Glossary: Section “fine” in *Music Glossary*.
Notation Reference: [Automatic bar lines], page 114, [Other variation in repeated sections], page 170, [Section divisions], page 128.
Snippets: Section “Repeats” in *Snippets*.

**Segno repeat structure**
\repeat segno differs from \repeat volta only in the resulting notation. Refer to the preceding sections for general information on entering music with repetition, alternatives, and variation. This section covers particulars of segno notation without fully reiterating the input syntax.

\repeat segno notates repetition with *D.C.* or *D.S.* instructions. It marks the beginning of the repeated section with a segno mark when it is not the beginning of the piece. It also marks alternative endings with coda marks in lieu of volta brackets, provided that the endings are intended to be performed in order, e.g., not `\volta 1,3` then `\volta 2,4`.

When alternative bar numbering is enabled, it is applied to alternatives notated with volta brackets whether they are created by `\repeat segno` or `\repeat volta`, but it is not applied to alternative endings notated with coda marks.

Demonstrations of common uses follow.

*al fine* Repeat instructions include *al Fine* if a `\fine` command appears at any prior point (see [Al-fine repeats], page 172).

```latex
\begin{verbatim}
\begin{music}
    \fixed c' {
        f1
        \repeat segno 2 {
            g1
            \volta 2 \fine
            \volta 1 a1
        }
        \section
    }
\end{music}
\end{verbatim}
```

\begin{verbatim}
\score \-with-title { \with { \paper { \magnification {100} } } { \music } }  
\score \-with-title { \with { \paper { \magnification {100} } } { \unfoldRepeats \music } }
\end{verbatim}

*alla coda* The beginning of each alternative ending is marked with an implied `\codaMark \default`. Repeat instructions in alternatives include `{al . . . e poi la . . . }` referring to the mark at the first alternative and the mark to skip to. Provided that the duration of the final alternative is
zero, the automatic mark is suppressed, allowing a section label to be set instead.

\begin{music}
\fixed c' { 
\repeat segno 2 { 
g1 
\alternative { 
\volta 1 { \repeat unfold 4 { a2 } } 
\volta 2 \volta #() { 
\section 
\sectionLabel "Coda"
}
}
\fina 
\\
\score { \music }
\score { \unfoldRepeats \music }
\music = \fixed c' { \repeat segno 2 { g1 } \fina }
\\
\score { \music }
\score { \unfoldRepeats \music }
\music = \fixed c' { \repeat segno 2 { g1 } \fina }
\\
\score { \music }
\score { \unfoldRepeats \music }
\music = \fixed c' { \repeat segno 2 { g1 } \fina }
\\ 
\end{music}

The return instruction can be abbreviated by setting an alternative formatting procedure (see [Segno repeat appearance], page 176).

\textit{da capo} Repeat instructions include \textit{D.C.} when the repeated section begins at the beginning of the score. The supported \textit{da capo} cases parallel the supported \textit{dal segno} cases.

\begin{music}
\fixed c' { \repeat segno 2 { g1 } \fina }
\\
\score { \music }
\score { \unfoldRepeats \music }
\music = \fixed c' { \repeat segno 2 { g1 } \fina }
\\
\score { \music }
\score { \unfoldRepeats \music }
\music = \fixed c' { \repeat segno 2 { g1 } \fina }
\\ 
\end{music}
**dal segno**  Repeat instructions include *D.S.* when the repeated section begins after the beginning of the score. The beginning of the repeated section is marked with an implied \SegnoMark \default.  

\begin{verbatim}
\music = \fixed c' { 
  f1
  \repeat segno 2 { 
    g1 
  } 
  \repeat segno 2 { 
    a1 
  } 
  \fine 
}
\end{verbatim}

A *dal-segno* repeat starting at the beginning of the score can be forced (see [Segno repeat appearance], page 176).

**multiple return**  
A repeat instruction to be performed more than once includes ‘... *V.*’. The number of times the instruction is performed is one less than the number of times the passage is performed.

\begin{verbatim}
\music = \fixed c' { 
  \repeat segno 3 { 
    g1 
  } 
  \fine 
}
\end{verbatim}

Internals Reference: Section “CodaMark” in Internals Reference, Section “JumpScript” in Internals Reference, Section “SectionLabel” in Internals Reference, Section “SegnoMark” in Internals Reference.

**Segno repeat appearance**

The marks and return instructions that \repeat segno creates are adjustable in some respects.

Return instructions are formatted with the Scheme procedure specified in the dalSegnoTextFormatter property. There is a predefined alternative formatter that creates shorter instructions.

\fixed c' {
  \set Score.dalSegnoTextFormatter = #format-dal-segno-text-brief
  f1
  \repeat segno 2 {
    g1
    \alternative {
      \volta 1 { a1 }
      \volta 2 \volta #'( ) {
        \section
        \sectionLabel "Coda"
      }
    }
  }
  \fine
}

The sequence numbers of the marks at the beginning of the repeated section and the beginning of the first alternative may be set explicitly without interfering with automatic return instructions (see [Manual repeat marks], page 181).

\fixed c' {
  \repeat segno 2 {
    \volta #'( ) \segnoMark 2 }
  g1
  \alternative {
    \volta 1 {
      \volta #'( ) \codaMark 2
      \repeat unfold 8 { a4 }
    }
  }
  \volta 2 \volta #'( ) {
    \section
    \sectionLabel "Coda"
  }

\fixed c' { \set TimeSignature = (4,4) \repeat segno 2 { \set Clef = G \volta #'( ) \segnoMark 2 } g1 \alternative { \volta 1 { \volta #'( ) \codaMark 2 \repeat unfold 8 { a4 } } } \volta 2 \volta #'( ) { \section \sectionLabel "Coda" } }
Without the explicit \segnomark 2, the above would have been rendered as a da-capo repeat.

As an alternative to printing a segno as a mark above the staff, it is possible to print it as a bar line by setting the \segnostyle property to bar-line. To avoid ambiguity, only the first segno bar remains unmarked.

```
\fixed c' {
  \set Score.segnostyle = #'bar-line
  R1
  \repeat unfold 3 {
    \repeat segno 2 {
      R1*2
    }
  }
  \fine
}
```

Where a segno bar coincides with other special bar lines, a combination bar line is chosen automatically from a predetermined set. For each supported combination, the bar line can be customized by setting a context property (see [Automatic bar lines], page 114).

Segno and coda marks are formatted with procedures specified in the \segnomarkformatter and codaMarkformatter properties. These are interchangeable with procedures used to format rehearsal marks (see [Rehearsal marks], page 124).

```
\fixed c' {
  \set Score.segnomarkformatter = #format-mark-numbers
  \set Score.segnostyle = #'bar-line
  R1
  \repeat unfold 3 {
    \repeat segno 2 {
      R1*2
    }
  }
  \fine
}
```
There is a predefined alternative segno formatter that prints a mark even over the first bar line:

\fixed c' {
  \set Score.segnoMarkFormatter = #format-segno-mark
  \set Score.segnoStyle = #bar-line
  R1
  \repeat unfold 3 {
    \segnoMark \default
    R1*2
  }
}

There is a predefined alternative coda mark formatter that uses \varcoda signs.

\fixed c' {
  \set Score.codaMarkFormatter = #format-varcoda-mark
  R1
  \repeat unfold 3 {
    \codaMark \default
    R1*2
  }
}

Selected Snippets

**Shortening volta brackets**

By default, the volta brackets will be drawn over all of the alternative music, but it is possible to shorten them by setting voltaSpannerDuration. In the next example, the bracket only lasts one measure, which is a duration of 3/4.

\relative c' {
  \time 3/4
  c4 c c
  \set Score.voltaSpannerDuration = #(ly:make-moment 3/4)
  \repeat volta 5 { d4 d d }
  \alternative {
    e4 e e
    f4 f f
  }
}
Adding volta brackets to additional staves

The Volta_engraver by default resides in the Score context, and brackets for the repeat are thus normally only printed over the topmost staff. This can be adjusted by adding the Volta_engraver to the Staff context where the brackets should appear; see also the “Volta multi staff” snippet.

\new Staff { \repeat volta 2 { c'1 } \alternative { c' } }
\new Staff { \repeat volta 2 { c'1 } \alternative { c' } }
\new Staff { \with { \consists "Volta_engraver" } { c'2 g' e' a' } }
\new Staff { \repeat volta 2 { c'1 } \alternative { c' } }

Alternative bar numbering

Two alternative methods for bar numbering can be set, especially for when using repeated music.

\relative c' {
  \set Score.alternativeNumberingStyle = #'numbers
  \repeat volta 3 { c4 d e f | }
  \alternative {
    { c4 d e f | c2 d \break }
    { f4 g a b | f4 g a b | f2 a | \break }
    { c4 d e f | c2 d }
  }
  c1 \break
  \set Score.alternativeNumberingStyle = #'numbers-with-letters
  \repeat volta 3 { c,4 d e f | }
  \alternative {
    { c4 d e f | c2 d \break }
  }
}

Installed Files: ly/engraver-init.ly.

Snippets: Section “Repeats” in Snippets.

Known issues and warnings

For repeats in volta form, spanners (slurs, etc.) that cross into alternatives work for the first alternative only. They likewise cannot wrap around from the end of an alternative back to the beginning of the repeated section.

The visual appearance of a continuing slur or tie in subsequent alternatives can be achieved with \repeatTie if the slur extends into only one note in the alternative block, although this method does not work in TabStaff; see [Ties], page 59. Other methods which may be tailored to indicate continuing slurs over several notes in alternative blocks, and which also work in TabStaff contexts, are shown in [Modifying ties and slurs], page 713.
The visual appearance of a continuing glissando in subsequent alternatives can be achieved by coding a glissando starting on a hidden grace note. See [Glissando], page 159.

If a repeat that begins with an incomplete measure has an \alternative block that contains modifications to the measureLength property, using \unfoldRepeats will result in wrongly-placed bar lines and bar check warnings.

A nested repeat like
\repeat ...
\repeat ...
\alternative

is ambiguous, since it is not clear to which \repeat the \alternative belongs. This ambiguity is resolved by always having the \alternative belong to the inner \repeat. For clarity, it is advisable to use braces in such situations.

**Manual repeat marks**

- **Note:** These methods are only used for displaying unusual repeat constructs, and may produce unexpected behavior. In most cases, repeats should be created using the standard \repeat command or by printing the relevant bar lines. For more information, see [Bar lines], page 106.

The property repeatCommands can be used to control the layout of volta-style repeats. Its value is a Scheme list. In general, each element is itself a list, '[(command args...)], but a command with no arguments may be abbreviated to a symbol; e.g., '[(start-repeat)] may be given as '[(start-repeat)].

- **end-repeat**

  End a repeated section.

  \begin{verbatim}
  \relative {
  c''1
  d4 e f g
  \set Score.repeatCommands = #'(end-repeat)
  c1
  }
  \end{verbatim}

- **start-repeat**

  Start a repeated section.

  \begin{verbatim}
  \relative {
  c''1
  \set Score.repeatCommands = #'(start-repeat)
  d4 e f g
  c1
  }
  \end{verbatim}
As per standard engraving practice, repeat signs are not printed at the beginning of a piece.

**volta text**

If text is markup, start a volta bracket with that label; if text is #{f}, end a volta bracket. A volta bracket which is not ended explicitly will not be printed.

```latex
\relative {
  f''4 g a b
  \set Score.repeatCommands = #'((volta "2"))
  g4 a g a
  \set Score.repeatCommands = #'((volta #f))
  c1
}
```

Multiple repeat commands may occur at the same point:

```latex
\relative {
  f''4 g a b
  \set Score.repeatCommands = #'((volta 2, 5) end-repeat)
  g4 a g a
  c1
  \set Score.repeatCommands = #'((volta #f) (volta "95") end-repeat)
  b1
  \set Score.repeatCommands = #'((volta #f))
}
```

Text can be included with the volta bracket. The text can be a number or numbers or markup text, see Section 1.8.2 [Formatting text], page 287. The simplest way to use markup text is to define the markup first, then include the markup in a Scheme list.

```latex
voltaAdLib = \markup { 1. 2. 3... \text italic { ad lib. } }
\relative {
  c''1
  \set Score.repeatCommands =
    #(list(list 'volta voltaAdLib) 'start-repeat)
    c4 b d e
  \set Score.repeatCommands = #'((volta #f) (volta "4.")) end-repeat)
  f1
  \set Score.repeatCommands = #'((volta #f))
}
```
Segno and coda marks can be created with the \segnoMark, \inStaffSegno, and \codaMark commands. This is the syntax for the mark commands:
\codaMark n
\segnoMark n

where n is a sequence number, or \default to use the next automatically. Rehearsal, segno, and coda marks are counted independently.

\fixed c' {
  e1
  \segnoMark \default
e1
  \segnoMark \default
g1
  \codaMark \default
g1
  \codaMark \default
b1
  \codaMark 96
b1
  \segnoMark 96
}

\inStaffSegno

The \inStaffSegno command is equivalent to \segnoMark \default with the extra effect of temporarily setting the segnoStyle property to bar-line to force printing it as a bar line.

\fixed c' {
  e1
  \inStaffSegno
g1
  \segnoMark \default
b1
}

At the beginning of a piece, \segnoMark \default and \codaMark \default create no mark. Specify ‘1’ to force a mark.

\fixed c' {
  \segnoMark 1
  f1
}

For more information on changing the appearance of segno and coda marks, see [Segno repeat appearance], page 176.
To create arbitrary jump instructions, use the `\jump` command.

\fixed c' \{
  \time 2/4
  f4 a
  b4 c'8 d'
  c'4 c
  \jump "Gavotte I D.C."
  \section
}\}

\begin{figure}[h]
  \centering
  \includegraphics[width=\textwidth]{gavotte_idc.png}
  \caption{Gavotte I D.C.}
\end{figure}

Notation Reference: [Bar lines], page 106, Section 1.8.2 [Formatting text], page 287, [Rehearsal marks], page 124, [Segno repeat appearance], page 176.

Snippets: Section “Repeats” in Snippets.

1.4.2 Short repeats

This section discusses how to input short repeats. Short repeats can take two forms: slashes or percent signs to represent repeats of a single note, a single measure or two measures, and tremolos otherwise.

Percent repeats

Repeated short patterns are printed once, and the repeated pattern is replaced with a special sign.

The syntax is

\repeat percent number musicexpr

where `musicexpr` is a music expression.

Patterns that are shorter than one measure are replaced by slashes.

\relative c' \{
  \repeat percent 4 { c128 d e f }
  \repeat percent 4 { c64 d e f }
  \repeat percent 5 { c32 d e f }
  \repeat percent 4 { c16 d e f }
  \repeat percent 4 { c8 d }
  \repeat percent 4 { c4 }
  \repeat percent 2 { c2 }
}\}

\begin{figure}[h]
  \centering
  \includegraphics[width=\textwidth]{short_repeats.png}
  \caption{Short repeats}
\end{figure}
Patterns of one or two measures are replaced by percent-like symbols.

\begin{verbatim}
\relative c' { 
    \repeat percent 2 { c4 d e f } 
    \repeat percent 2 { c2 d } 
    \repeat percent 2 { c1 } 
}
\end{verbatim}

Note that the correct time offset to access the \texttt{DoublePercentRepeat} grob is the beginning of the repeat’s second bar, which can be easily achieved with \texttt{\after}.

\begin{verbatim}
\new Voice \with { \consists Balloon_engraver } 
{ \after 1*3 
    \balloonGrobText DoublePercentRepeat #'(-1 . 2) "repeat"
    \repeat percent 2 { g'1 | a'1 } }
\end{verbatim}

Patterns that are shorter than one measure but contain mixed durations use a double-percent symbol.

\begin{verbatim}
\relative { 
    \repeat percent 4 { c'8. <d f>16 } 
    \repeat percent 2 { \tuplet 3/2 { r8 c d } e4 } 
}
\end{verbatim}

Selected Snippets

**Percent repeat counter**

Measure repeats of more than two repeats can get a counter when the convenient property is switched, as shown in this example:

\begin{verbatim}
\relative c' { 
    \after 
    \set countPercentRepeats = ##t 
    \repeat percent 4 { c1 } 
}
\end{verbatim}
Percent repeat count visibility

Percent repeat counters can be shown at regular intervals by setting the context property `repeatCountVisibility`.

```
\relative c' {
  \set countPercentRepeats = ##t
  \set repeatCountVisibility = #(every-nth-repeat-count-visible 5)
  \repeat percent 10 { c1 } \break
  \set repeatCountVisibility = #(every-nth-repeat-count-visible 2)
  \repeat percent 6 { c1 d1 }
}
```

Isolated percent repeats

Isolated percents can also be printed.

```
\relative c' {
  \makePercent s1
}
```

See also

Snippets: Section “Repeats” in Snippets.

Internals Reference: Section “RepeatSlash” in Internals Reference, Section “RepeatSlashEvent” in Internals Reference, Section “DoubleRepeatSlash” in Internals Reference, Section “PercentRepeat” in Internals Reference, Section “PercentRepeatCounter” in Internals Reference, Section “PercentRepeatedMusic” in Internals Reference, Section “Percent_repeat_engraver” in Internals Reference, Section “DoublePercentEvent” in Internals Reference, Section “DoublePercentRepeat” in Internals Reference, Section “DoublePercentRepeatCounter” in Internals Reference, Section “Double_percent_repeat_engraver” in Internals Reference, Section “Slash_repeat_engraver” in Internals Reference.
Known issues and warnings

Percent repeats will not contain anything else apart from the percent sign itself; in particular, timing changes will not be repeated.

\repeat percent 3 { \time 5/4 c2. 2 \time 4/4 2 2 }

Any meter changes or \partial commands need to occur in parallel passages outside of any percent repeat, e.g. in a separate timing track.

<<
\repeat percent 3 { c2. 2 2 2 }
\repeat unfold 3 { \time 5/4 s4*5 \time 4/4 s1 }
>>

Tremolo repeats

Tremolos can take two forms: alternation between two chords or two notes, and rapid repetition of a single note or chord. Tremolos consisting of an alternation are indicated by adding beams between the notes or chords being alternated, while tremolos consisting of the rapid repetition of a single note are indicated by adding beams or slashes to a single note.

To place tremolo marks between notes, use \repeat with tremolo style:

\relative c' { 
\repeat tremolo 8 { c16 d }
\repeat tremolo 6 { c16 d }
\repeat tremolo 2 { c16 d }
}

The \repeat tremolo syntax expects exactly two notes within the braces, and the number of repetitions must correspond to a note value that can be expressed with plain or dotted notes. Thus, \repeat tremolo 7 is valid and produces a double dotted note, but \repeat tremolo 9 is not.

The duration of the tremolo equals the duration of the braced expression multiplied by the number of repeats: \repeat tremolo 8 { c16 d16 } gives a whole note tremolo, notated as two whole notes joined by tremolo beams.

There are two ways to put tremolo marks on a single note. The \repeat tremolo syntax is also used here, in which case the note should not be surrounded by braces:

\repeat tremolo 4 c'16
The same output can be obtained by adding $N$ after the note, where $N$ indicates the duration of the subdivision (it must be at least 8). If $N$ is 8, one beam is added to the note’s stem. If $N$ is omitted, the last value is used:

\begin{verbatim}
\relative { 
c''2:8 c:32 
c: c: 
}
\end{verbatim}

Selected Snippets

**Cross-staff tremolos**

Since \repeat tremolo expects exactly two musical arguments for chord tremolos, the note or chord which changes staff within a cross-staff tremolo should be placed inside curly braces together with its \change Staff command.

\begin{verbatim}
\new PianoStaff <<
  \new Staff = "up" \relative c'' { 
    \key a \major 
    \time 3/8 
    s4.
  }
\new Staff = "down" \relative c'' { 
  \key a \major 
  \time 3/8 
  \voiceOne 
  \repeat tremolo 6 { 
    <a e'>32 
    { 
      \change Staff = "up"
      \voiceTwo 
      <cis a' dis>32 
    }
  }
}
>>
\end{verbatim}

1.5 Simultaneous notes

Polyphony in music refers to having more than one voice occurring in a piece of music. Polyphony in LilyPond refers to having more than one voice on the same staff.

1.5.1 Single voice

This section discusses simultaneous notes inside the same voice.

Chorded notes

A chord is formed by enclosing a set of pitches between < and >. A chord may be followed by a duration just like simple notes.

\relative {
    <a' c e>1 <a c e>2 <f a c e>4 <a c>8. <g c e>16
}

\relative {
    <a' c e>1 <a c e>2 <f a c e>4 <a c>8. <g c e>16
}
Chords may also be followed by articulations, again just like simple notes.

\relative {
  <a' c e>1\fermata <a c e>2→ <f a c e>4\prall <a c e>8. ^! <g c e>16-.}

The notes within the chord themselves can also be followed by articulation and ornamentation.

\relative {
  <a' c \prall e>1 <a-- c-- e>2 <f-. a c-. e-.>4
  <a--> c-->8. <g\fermata c e>\turn>16}

However some notation, such as dynamics and hairpins must be attached to the chord rather than to notes within the chord, otherwise they will not print. Other notation like fingerings and slurs will get placed markedly different when attached to notes within a chord rather than to whole chords or single notes.

\relative {
  <a'\f c ( e>1 <a c e)>/f <a\< c e>( <a\! c e>)
  <a c e>\< <a c e> <a c e>!}

A chord acts merely as a container for its notes, its articulations and other attached elements. Consequently, a chord without notes inside does not actually have a duration. Any attached articulations will happen at the same musical time as the next following note or chord and be combined with them (for more complex possibilities of combining such elements, see [Simultaneous expressions], page 193):

\relative {
  \grace { g'8( a b )}
  <> ) \p < -. \markup \italic "sempre staccato"
  \repeat unfold 4 { c4 e } c1/f}

Relative mode can be used for pitches in chords. The first note of each chord is always relative to the first note of the chord that came before it, or in the case where no preceding
chord exists, the pitch of the last note that came before the chord. All remaining notes in the
chord are relative to the note that came before it within the same chord.

```
relative {
    <a' c e>1 <f a c> <a c e> <f' a c> <b, e b,>
}
```

For more information about chords, see Section 2.7 [Chord notation], page 465.

See also
Notation Reference: Section 2.7 [Chord notation], page 465, [Articulations and ornamentations], page 137, [Relative octave entry], page 2. Section 1.5.2 [Multiple voices], page 195.
Snippets: Section “Simultaneous notes” in Snippets.

Known issues and warnings
Chords containing more than two pitches within a staff space, such as ‘<e f! fis!>’, create
overlapping note heads. Depending on the situation, better representations might involve
• temporary use of Section 1.5.2 [Multiple voices], page 195, ‘<< f! \\ <e fis!> >>’,
• enharmonic transcription of one or more pitches, ‘<e f ges>’, or
• [Clusters], page 194.

Chord repetition
In order to save typing, a shortcut can be used to repeat the preceding chord. The chord
repetition symbol is q:

```
relative {
    <a' c e>1 q <f a c>2 q
}
```

As with regular chords, the chord repetition symbol can be used with durations, articulations,
markups, slurs, beams, etc., as only the pitches of the previous chord are duplicated.

```
relative {
    <a' c e>1\p"text" q2\<( q8)[-! q8.]\! q16-1-2-3 q8\prall
}
```

The chord repetition symbol always remembers the last instance of a chord so it is possible
to repeat the most recent chord even if other non-chorded notes or rests have been added since.

```
relative {
```
However, the chord repetition symbol does not retain any dynamics, articulation or ornamentation within, or attached to, the previous chord.

\relative {
  \chordRepeats #'(articulation-event)
  { <a'-. c\prall e>1\sfz c'4 q2 r8 q8-. } | 
  q2 c, | 
}

Here using \chordRepeats inside of a \relative construction produces unexpected results: once chord events have been expanded, they are indistinguishable from having been entered as regular chords, making \relative assign an octave based on their current context.

Since nested instances of \relative don’t affect one another, another \relative inside of \chordRepeats can be used for establishing the octave relations before expanding the repeat chords. In that case, the whole content of the inner \relative does not affect the outer one; hence the different octave entry of the final note in this example.
Interactions with `\relative` occur only with explicit calls of `\chordRepeats`: the implicit expansion at the start of typesetting is done at a time where all instances of `\relative` have already been processed.

Notation Reference: Section 2.7 [Chord notation], page 465, [Articulations and ornaments], page 137.

Simultaneous expressions

One or more music expressions enclosed in double angle brackets are taken to be simultaneous. If the first expression begins with a single note or if the whole simultaneous expression appears explicitly within a single voice, the whole expression is placed on a single staff; otherwise the elements of the simultaneous expression are placed on separate staves.

The following examples show simultaneous expressions on one staff:

```latex
\new Voice { % explicit single voice
\relative { a'4 b g2 }
  \relative { d'4 g c,2 } >>
}
```

```
% single first note
\relative { a' << \relative { a'4 b g }
  \relative { d'4 g c, } >>
}
```

This can be useful if the simultaneous sections have identical rhythms, but attempts to attach notes with different durations to the same stem will cause errors. Notes, articulations, and property changes in a single ‘Voice’ are collected and engraved in musical order:

```latex
\relative {
  <a' c>4-. <>-. << c a >> << { c-. <c a} { a s-. } >>
}
```

Multiple stems or beams or different note durations or properties at the same musical time require the use of multiple voices.
The following example shows how simultaneous expressions can generate multiple staves implicitly:

```latex
% no single first note
<< \relative { a'4 b g2 }  
\relative { d'4 g2 c,4 } >>
```

Here different rhythms cause no problems because they are interpreted in different voices.

**Known issues and warnings**

If notes from two or more voices, with no shifts specified, have stems in the same direction, the message

```latex
warning: This voice needs a \voiceXx or \shiftXx setting
```

will appear during compilation. This message can be suppressed by:

```latex\override NoteColumn.ignore-collision = ##t
```

However, this not only suppresses the warning but will prevent any collision resolution whatsoever and may have other unintended effects (also see Known Issues in [Collision resolution], page 200).

**Clusters**

A cluster indicates a continuous range of pitches to be played. They can be denoted as the envelope of a set of notes. They are entered by applying the function `\makeClusters` to a sequence of chords, e.g.,

```latex
\relative \makeClusters { <g' b>2 <c g'> }
```

Ordinary notes and clusters can be put together in the same staff, even simultaneously. In such a case no attempt is made to automatically avoid collisions between ordinary notes and clusters.

**See also**

Snippets: Section “Simultaneous notes” in Snippets.

**Known issues and warnings**

Clusters look good only if they span at least two chords; otherwise they appear too narrow.

Clusters do not have a stem and cannot indicate durations by themselves, but the length of the printed cluster is determined by the durations of the defining chords. Separate clusters need a separating rest between them.

Clusters do not produce MIDI output.
1.5.2 Multiple voices

This section discusses simultaneous notes in multiple voices or multiple staves.

Single-staff polyphony

Explicitly instantiating voices

The basic structure needed to achieve multiple independent voices in a single staff is illustrated in the following example:

```latex
\new Staff <<
\new Voice = "first"
\relative {
\voiceOne r8 r16 g'' e8. f16 g8 [ c, ] f \e16 d }
\new Voice = "second"
\relative {
\voiceTwo d''16 c d8 ~ d16 b c8 ~ d16 b c8 ~ d16 b8. }
>>
```

Here, voices are instantiated explicitly and are given names. The `\voiceOne`...`\voiceFour` commands set up the voices so that first and third voices get stems up, second and fourth voices get stems down, third and fourth voice note heads are horizontally shifted, and rests in the respective voices are automatically moved to avoid collisions. The `\oneVoice` command returns all the voice settings to the neutral default directions.

Note that `Voice` is a bottom-level context (see [Bottom-level contexts – voices], page 657). In TabStaff one would use `TabVoice` instead.

Temporary polyphonic passages

A temporary polyphonic passage can be created with the following construct:

```latex
<< { \voiceOne ... }
\new Voice { \voiceTwo ... }
>> \oneVoice
```

Here, the first expression within a temporary polyphonic passage is placed into the `Voice` context which was in use immediately before the polyphonic passage, and that same `Voice` context continues after the temporary section. Other expressions within the angle brackets are assigned to distinct temporary voices. This allows lyrics to be assigned to one continuing voice before, during and after a polyphonic section:

```latex
\relative <<
\new Voice = "melody" {
\a'4
<<
{ \voiceOne
  g f }
\new Voice {
  \voiceTwo
  d2 }
} >>
```
This is my song.

Here, the \voiceOne and \voiceTwo commands are required to define the settings of each voice.

In TabStaff one needs to use TabVoice.

If the same music should appear in Staff and TabStaff the general Bottom context may be used (see [Bottom-level contexts – voices], page 657).

\begin{verbatim}
\mus = \relative \\
\new Bottom = "melody" {
  a'4
  <<
  { \voiceOne
g f
  }
  \new Bottom {
  \voiceTwo
d2
  }
  >>
} \oneVoice
e4

<< \new Staff \mus
\new Lyrics \lyricsto "melody" {
  This is my song.
} >>

<< \new TabStaff \mus
\new Lyrics \lyricsto "melody" {
  This is my song.
} >>
\end{verbatim}
The double backslash construct

The $\langle \{ \ldots \} \ \backslash \{ \ldots \} \rangle$ construct, where the two (or more) expressions are separated by double backslashes, behaves differently to the similar construct without the double backslashes: all the expressions within this construct are assigned to new Bottom contexts of the current type, typically Voice or TabVoice (see [Bottom-level contexts – voices], page 657). These new Bottom contexts are created implicitly and are given the fixed names "1", "2", etc.

The first example could be typeset as follows:

\begin{verbatim}
<<
\relative { r8 r16 g'' e8. f16 g8[ c,] f e16 d }
\backslash\relative { d''16 c d8~ 16 b c8~ 16 b c8~ 16 b8. }
>>
\end{verbatim}

This syntax can be used where it does not matter that temporary voices are created and then discarded. These implicitly created voices are given the settings equivalent to the effect of the $\texttt{\voiceOne} \ldots \texttt{\voiceFour}$ commands, in the order in which they appear in the code.

In the following example, the intermediate voice has stems up, therefore we enter it in the third place, so it becomes voice three, which has the stems up as desired. Spacer rests are used to avoid printing doubled rests.

\begin{verbatim}
<<
\relative { r8 g'' g g g f16 ees f8 d }
\backslash\relative { ees'8 r ees r d r d r }
\backslash\relative { d''8 s c s bes s a s }
>>
\end{verbatim}

In all but the simplest works it is advisable to create explicit Voice contexts as explained in Section “Contexts and engravers” in Learning Manual and Section “Explicitly instantiating voices” in Learning Manual.
**Voice order**

When entering multiple voices in the input file, use the following order:

- Voice 1: highest
- Voice 2: lowest
- Voice 3: second highest
- Voice 4: second lowest
- Voice 5: third highest
- Voice 6: third lowest
- etc.

Though this may seem counterintuitive, it simplifies the automatic layout process. Note that the odd-numbered voices are given upstems, and the even-numbered voices are given downstems:

```
\new Staff <<
\time 2/4
{ f''2 } % 1: highest
\ \ { c'2 } % 2: lowest
\ \ \ { d''2 } % 3: second-highest
\ \ \ { e'2 } % 4: second-lowest
\ \ \ \ { b'2 } % 5: third-highest
\ \ \ \ \ { g'2 } % 6: third-lowest
>>
```

When a different voice entry order is desired, the command `\voices` may be convenient:

```
\new Staff \voices 1,3,5,6,4,2 <<
\time 2/4
{ f''2 } % 1: highest
\ \ { d''2 } % 3: second-highest
\ \ \ { b'2 } % 5: third-highest
\ \ \ \ { g'2 } % 6: third-lowest
\ \ \ \ \ { e'2 } % 4: second-lowest
\ \ \ \ \ \ { c'2 } % 2: lowest
>>
```
Note: Lyrics and spanners (such as slurs, ties, hairpins, etc.) cannot be created ‘across’ voices.

**Identical rhythms**

In the special case that we want to typeset parallel pieces of music that have the same rhythm, we can combine them into a single Voice context, thus forming chords. To achieve this, enclose them in a simple simultaneous music construct within an explicit voice:

\new Voice <<
  \relative { e''4 f8 d e16 f g8 d4 }
  \relative { c''4 d8 b c16 d e8 b4 }
>>

This method leads to strange beamings and warnings if the pieces of music do not have the same rhythm.

**Predefined commands**

\voiceOne, \voiceTwo, \voiceThree, \voiceFour, \oneVoice.

**See also**

Notation Reference: [Percussion staves], page 446, [Invisible rests], page 63, [Stems], page 265.

Snippets: Section “Simultaneous notes” in Snippets.

**Voice styles**

Voices may be given distinct colors and shapes, allowing them to be easily identified:

<<
  \relative { \voiceOneStyle d''4 c2 b4 }
  \relative { \voiceTwoStyle e'2 e }
  \relative { \voiceThreeStyle b2. c4 }
  \relative { \voiceFourStyle g'2 g }
>>

The \voiceNeutralStyle command is used to revert to the standard presentation.

**Predefined commands**

\voiceOneStyle, \voiceTwoStyle, \voiceThreeStyle, \voiceFourStyle, \voiceNeutralStyle.
See also
Snippets: Section “Simultaneous notes” in Snippets.

Collision resolution
The note heads of notes in different voices with the same pitch, same note head and opposite stem direction are automatically merged, but notes with different note heads or the same stem direction are not. Rests opposite a stem in a different voice are shifted vertically. The following example shows three different circumstances, on beats 1 and 3 in bar 1 and beat 1 in bar 2, where the automatic merging fails.

<<
\relative {
  c''8 d e d c d c4
  g'2 fis
} \ \ \\
\relative {
  c''2 c8. b16 c4
  e,2 r
} \ \ \\
\relative {
  \oneVoice
  s1
  e'8 a b c d2
}
>>

Notes with different note heads may be merged as shown below. In this example the note heads on beat 1 of bar 1 are now merged:

<<
\relative {
  \mergeDifferentlyHeadedOn
  c''8 d e d c d c4
  g'2 fis
} \ \ \\
\relative {
  c''2 c8. b16 c4
  e,2 r
} \ \ \\
\relative {
  \oneVoice
  s1
  e'8 a b c d2
}
>>
Quarter and half notes are not merged in this way, since it would be difficult to tell them apart.

Note heads with different dots as shown in beat 3 of bar 1 may be also be merged:

```latex
<< \relative { \mergeDifferentlyHeadedOn \mergeDifferentlyDottedOn c''8 d e d c d c4 g'2 fis } \ relative { c''2 c8. b16 c4 e,2 r } \ relative { \oneVoice s1 e'8 a b c d2 } >>
```

The half note and eighth note at the start of the second measure are incorrectly merged because the automatic merge cannot successfully complete the merge when three or more notes line up in the same note column, and in this case the merged note head is incorrect. To allow the merge to select the correct note head a \texttt{\shift} must be applied to the note that should not be merged. Here, \texttt{\shiftOn} is applied to move the top g out of the column, and \texttt{\mergeDifferentlyHeadedOn} then works properly.

```latex
<< \relative { \mergeDifferentlyHeadedOn \mergeDifferentlyDottedOn c''8 d e d c d c4 \shiftOn g'2 fis } \ relative { c''2 c8. b16 c4 e,2 r } \ relative { \oneVoice s1 e'8 a b c d2 } >>
```
The \shiftOn command allows (but does not force) the notes in a voice to be shifted. When \shiftOn is applied to a voice, a note or chord in that voice is shifted only if its stem would otherwise collide with a stem from another voice, and only if the colliding stems point in the same direction. The \shiftOff command prevents this type of shifting from occurring.

By default, the outer voices (normally voices one and two) have \shiftOff specified, while the inner voices (three and above) have \shiftOn specified. When a shift is applied, voices with upstems (odd-numbered voices) are shifted to the right, and voices with downstems (even-numbered voices) are shifted to the left.

Here is an example to help you visualize how an abbreviated polyphonic expression would be expanded internally.

Note: Note that with three or more voices, the vertical order of voices in your input file should not be the same as the vertical order of voices on the staff!

\new Staff \relative { 
  \%% abbreviated entry 
  << 
    \{ f''2 } \ % 1: highest 
    \ \ 
    \{ g,2 \} \ % 2: lowest 
    \ \ 
    \{ d'2 \} \ % 3: upper middle 
    \ \ 
    \{ b2 \} \ % 4: lower middle 
  >> 
  \%% internal expansion of the above 
  << 
    \new Voice = "1" { \voiceOne \shiftOff f'2 } 
    \new Voice = "2" { \voiceTwo \shiftOff g,2 } 
    \new Voice = "3" { \voiceThree \shiftOn d'2 } \ % shifts right 
    \new Voice = "4" { \voiceFour \shiftOn b2 } \ % shifts left 
  >> 
}

Two additional commands, \shiftOnn and \shiftOnnn provide further shift levels which may be specified temporarily to resolve collisions in complex situations – see Section “Real music example” in Learning Manual.

Notes are only merged if they have opposing stem directions (as they have, for example, in voices one and two by default or when the stems are explicitly set in opposite directions).
Predefined commands
\mergeDifferentlyDottedOn, \mergeDifferentlyDottedOff, \mergeDifferentlyHeadedOn, \mergeDifferentlyHeadedOff.
\shiftOn, \shiftOnn, \shiftOnnn, \shiftOff.

Selected Snippets

**Additional voices to avoid collisions**
In some instances of complex polyphonic music, additional voices are necessary to prevent collisions between notes. If more than four parallel voices are needed, additional voices can be added by defining a variable using the Scheme function `context-spec-music`.

```plaintext
voiceFive = #(context-spec-music (make-voice-props-set 4) 'Voice)

\relative c' { 
  \time 3/4
  \key d \minor
  \partial 2
  \new Voice { 
    \voiceOne
    a4. a8
    e'4 e4. e8
    f4 d4. c8
  }
  \new Voice { 
    \voiceTwo
    d,2
    d4 cis2
    d4 bes2
  }
  \new Voice { 
    \voiceThree
    f'2
    bes4 a2
    a4 s2
  }
  \new Voice { 
    \voiceFive
    s2
    g4 g2
    f4 f2
  }
  >>
}
```

![Musical Notation Example](image-url)
Moving dotted notes in polyphony

When a dotted note in the upper voice is moved to avoid a collision with a note in another voice, the default is to move the upper note to the right. This behaviour can be over-ridden by using the prefer-dotted-right property of NoteCollision.

\new Staff \relative c' <<
{ f2. f4 \override Staff.NoteCollision.prefer-dotted-right = ##f f2. f4 \override Staff.NoteCollision.prefer-dotted-right = ##t f2. f4 } \\ { e4 e e e e e e e e e e e e } >>

Forcing horizontal shift of notes

When the typesetting engine cannot cope, the following syntax can be used to override typesetting decisions. The units of measure used here are staff spaces.

\relative c' <<
{ <d g>2 <d g> } \\ { <b f'>2 \once \override NoteColumn.force-hshift = #1.7 <b f'>2 } >>

See also

Snippets: Section “Simultaneous notes” in Snippets.

Internals Reference: Section “NoteColumn” in Internals Reference, Section “NoteCollision” in Internals Reference, Section “RestCollision” in Internals Reference.

Known issues and warnings

Using \override NoteColumn.ignore-collision = ##t will cause differently headed notes in different voices to merge incorrectly.
Merging rests

When using multiple voices it is common to merge rests which occur in both parts. This can be accomplished using \texttt{Merge\_rests\_engraver}.

\begin{verbatim}
voiceA = \relative { d''4 r d2 | R1 | }
voiceB = \relative { fis'4 r g2 | R1 | }
\score {
  \new Staff \with {
    instrumentName = "unmerged"
  }
  \new Voice { \voiceOne \voiceA }
  \new Voice { \voiceTwo \voiceB }
} <<
\new Staff \with {
  instrumentName = "merged"
  \consists Merge\_rests\_engraver
} <<
  \new Voice { \voiceOne \voiceA }
  \new Voice { \voiceTwo \voiceB }
} >>
\end{verbatim}

Setting the context property \texttt{suspendRestMerging} to \texttt{#t} allows for turning off rest merging temporarily.

Automatic part combining

Automatic part combining is used to merge two separate parts of music onto a single staff. This can be especially helpful when typesetting orchestral scores. A single \texttt{Voice} is printed while the two parts of music are the same, but in places where they differ, a second \texttt{Voice} is printed. Stem directions are set up & down accordingly while Solo and a due parts are also identified and marked appropriately.
The syntax for automatic part combining is:
\partCombine musicexpr1 musicexpr2

The following example demonstrates the basic functionality, putting parts on a single staff as polyphony and setting stem directions accordingly. The same variables are used for the independent parts and the combined staff.

\instrumentOne = \relative {  
c'4 d e f |  
R1 |  
d'4 c b a |  
b4 g2 f4 |  
e1 |  
}  

\instrumentTwo = \relative {  
R1 |  
g'4 a b c |  
d4 c b a |  
g4 f( e) d |  
e1 |  
}  

<<  
\new Staff \instrumentOne  
\new Staff \instrumentTwo  
\new Staff \partCombine \instrumentOne \instrumentTwo  
>>

Both parts have identical notes in the third measure, so only one instance of the notes is printed. Stem, slur, and tie directions are set automatically, depending on whether the parts are playing solo or in unison. When needed in polyphony situations, the first part (with context called one) gets “up” stems, while the second (called two) always gets “down” stems. In solo situations, the first and second parts get marked with “Solo” and “Solo II”, respectively. The unison (a due) parts are marked with the text “a2”.

By default, the partCombiner merges two notes of the same pitch as an a due note, combines notes with the same rhythm less than a ninth apart as chords and separates notes more than a ninth apart (or when the voices cross) into separate voices. This can be overridden with an optional argument of a pair of numbers after the \partCombine command: the first specifies the interval where notes start to be combined (the default is zero) and the second where the notes are split into separate voices. Setting the second argument to zero means that the partCombiner
splits notes with an interval of a second or more, setting it to one splits notes of a third or more, and so on.

\[\text{instrumentOne} = \begin{array}{l}
\text{a4 b c d |}
\text{e f g a |}
\text{b c d e |}
\end{array}\]

\[\text{instrumentTwo} = \begin{array}{l}
\text{c'4 c c c |}
\text{c c c c |}
\text{c c c c |}
\end{array}\]

Both arguments to \partCombine will be interpreted as separate Voice contexts, so if the music is being specified in relative mode then both parts must contain a \relative function, i.e.,

\[
\text{\partCombine \relative ... musicexpr1}
\text{\relative ... musicexpr2}
\]

A \relative section that encloses a \partCombine has no effect on the pitches of musicexpr1 or musicexpr2.

In professional scores, voices are often kept apart from each other for long passages of music even if some of the notes are the same in both voices, and could just as easily be printed as unison. Combining notes into a chord, or showing one voice as solo is, therefore, not ideal as the \partCombine function considers each note separately. In this case the \partCombine function can be overridden with one of the following commands. All of the commands may be preceded with \once in order to have them only apply to the next note in the music expression.

- \partCombineApart keeps the notes as two separate voices, even if they can be combined into a chord or unison.
- \partCombineChords combines the notes into a chord.
- \partCombineUnisono combines both voices as “unison”.
- \partCombineSoloI prints only voice one, and marks it as a “Solo”.
- \partCombineSoloII prints only voice two and marks it as a “Solo”.
- \partCombineAutomatic ends the functions of the commands above, and reverts back to the standard \partCombine functionality.
Using \partCombine with lyrics

The \partCombine command is not designed to work with lyrics; if one of the voices is explicitly named in order to attach lyrics to it, the partCombiner will stop working. However, this effect can be achieved using a NullVoice context. See [Polyphony with shared lyrics], page 341.

Selected Snippets

Combining two parts on the same staff

The part combiner tool (\partCombine command) allows the combination of several different parts on the same staff. Text directions such as “solo” or “a2” are added by default; to remove them, simply set the property printPartCombineTexts to f.

For vocal scores (hymns), there is no need to add “solo/a2” texts, so they should be switched off. However, it might be better not to use it if there are any solos, as they won’t be indicated. In such cases, standard polyphonic notation may be preferable.
This snippet presents the three ways two parts can be printed on a same staff: standard polyphony, `\partCombine` without texts, and `\partCombine` with texts.

%%% Combining pedal notes with clef changes

    printPartCombineTexts = ##f
  }
  \partCombine \musicUp \musicDown
  \new Staff \with { instrumentName = "PartCombine with text" }
  \partCombine \musicUp \musicDown
  \layout {
    indent = 6.0\cm
    \context { \Score
      \override SystemStartBar.collapse-height = #30
    }
  }
}
Changing partcombine texts

When using the automatic part combining feature, the printed text for the solo and unison sections may be changed:

\new Staff <<
\set Staff.soloText = #"girl"
\set Staff.soloIIText = #"boy"
\set Staff.aDueText = #"together"
\partCombine
\relative c'' {
  g4 g r r
  a2 g
}
\relative c'' {
  r4 r a\{ b)
  a2 g
}
>>

\text{girl, boy, together}

Notation Reference: Section 1.6.3 [Writing parts], page 234.

Snippets: Section “Simultaneous notes” in Snippets.

Known issues and warnings

All \partCombine... functions can only accept two voices.

\partCombine... functions cannot be placed inside a \tuplet or \relative block.

If printPartCombineTexts is set and the two voices play the same notes “on and off”, in the same measure, the part combiner may typeset a2 more than once in that measure.

\partCombine only knows when a note starts in a Voice; it cannot, for example, remember if a note in one Voice has already started when combining notes that have just started in the
other Voice. This can lead to a number of unexpected issues including “Solo” or “Unison” marks being printed incorrectly.

\partCombine keeps all spanners (slurs, ties, hairpins, etc.) in the same Voice so that if any such spanners start or end in a different Voice, they may not be printed properly or at all.

If the \partCombine function cannot combine both music expressions (i.e., when both voices have different durations), it will give the voices, internally, its own custom names: one and two respectively. This means if there is any “switch” to a differently named Voice context, the events in that differently named Voice will be ignored.

Refer also to Known issues and warnings when using \partCombine with tablature in [Default tablatures], page 393, and the Note in [Automatic beams], page 91, when using automatic beaming.

Writing music in parallel

Music for multiple parts can be interleaved in input code. The function \parallelMusic accepts a list with the names of a number of variables to be created, and a musical expression. The content of alternate measures from the expression become the value of the respective variables, so you can use them afterwards to print the music.

\begin{quote}
\textbf{Note:} Bar checks \margin| must be used, and the measures must be of the same length.
\end{quote}

\begin{verbatim}
\parallelMusic voiceA,voiceB,voiceC {
  % Bar 1
  r8 g'16 c'' e' g' c'' e'' r8 g'16 c'' e' g' c'' e'' |
  r16 e'8.- 4 r16 e'8.- 4 |
  c'2 c'2 |

  % Bar 2
  r8 a'16 d'' f' a' d'' f'' r8 a'16 d'' f' a' d'' f'' |
  r16 d'8.- 4 r16 d'8.- 4 |
  c'2 c'2 |
}
\new StaffGroup <<
  \new Staff << \voiceA \ \ \voiceB >>
  \new Staff { \clef bass \voiceC }

\end{verbatim}

Relative mode may be used. Note that the \relative command is not used inside \parallelMusic itself. The notes are relative to the preceding note in the voice, not to the previous note in the input – in other words, relative notes for voiceA ignore the notes in voiceB.

\begin{verbatim}
\parallelMusic voiceA,voiceB,voiceC {
  % Bar 1

\end{verbatim}
This works quite well for piano music. This example maps four consecutive measures to four variables:

\begin{verbatim}

global = {
  \key g \major
  \time 2/4
}
\end{verbatim}

\begin{verbatim}
\parallelMusic voiceA,voiceB,voiceC,voiceD {
  % Bar 1
  a8  b  c  d  |
  d4  e  |
  c16 d  e  fis d  e  fis  g  |
  a4  a  |

  % Bar 2
  e8  fis  g  a  |
  fis4  g  |
  e16 fis  g  a  fis g a  b  |
  a4  a  |

  % Bar 3 ...
}
\end{verbatim}

\begin{verbatim}
\score {
  \new PianoStaff <<
  \new Staff {
    \global {
      \relative c''
      \voiceA
    }
  }

1.6 Staff notation
This section explains how to influence the appearance of staves, how to print scores with more than one staff, and how to add tempo indications and cue notes to staves.

### 1.6.1 Displaying staves

This section describes the different methods of creating and grouping staves.

#### Instantiating new staves

*Staves* (singular: *staff*) are created with the `\new` or `\context` commands. For details, see Section 5.1.2 [Creating and referencing contexts], page 657.

The basic staff context is `Staff`:

```latex
\new Staff \relative { c''4 d e f }
```

The `DrumStaff` context creates a five-line staff set up for a typical drum set. Each instrument is shown with a different symbol. The instruments are entered in drum mode following a `\drummode` command, with each instrument specified by name. For details, see [Percussion staves], page 446.

```latex
\new DrumStaff {
  \drummode { cymc hh ss tomh }
}
```

The `RhythmicStaff` creates a single-line staff that only displays the rhythmic values of the input. Real durations are preserved. For details, see [Showing melody rhythms], page 88.

```latex
\new RhythmicStaff { c4 d e f }
```

The `TabStaff` creates a tablature with six strings in standard guitar tuning. For details, see [Default tablatures], page 393.

```latex
\new TabStaff \relative { c''4 d e f }
```

There are two staff contexts specific for the notation of ancient music: MensuralStaff and VaticanaStaff. They are described in [Predefined contexts], page 493.

The `GregorianTranscriptionStaff` context creates a staff to notate modern Gregorian chant. It engraves *divisiones* as bar lines, but it does not show measure bar lines.

```latex
\new GregorianTranscriptionStaff \relative { c''4 d e f e d }
```

New single staff contexts may be defined. For details, see Section 5.1.6 [Defining new contexts], page 669.

Snippets: Section “Staff notation” in *Snippets*.

Grouping staves

Various contexts exist to group single staves together in order to form multi-staff systems. Each grouping context sets the style of the system start delimiter and the behavior of bar lines.

If no context is specified, the default properties will be used: the group is started with a vertical line, and the bar lines are not connected.

```
<<
\new Staff \relative { c''1 c }
\new Staff \relative { c''1 c }
>>
```

In the StaffGroup context, the group is started with a bracket and bar lines are drawn through all the staves.

```
\new StaffGroup <<
\new Staff \relative { c''1 c }
\new Staff \relative { c''1 c }
>>
```

In a ChoirStaff, the group starts with a bracket, but bar lines are not connected.

```
\new ChoirStaff <<
\new Staff \relative { c''1 c }
\new Staff \relative { c''1 c }
>>
```
In a GrandStaff, the group begins with a brace, and bar lines are connected between the staves.

\new GrandStaff <<
    \new Staff \relative { c''1 c }
    \new Staff \relative { c''1 c }
>>

The PianoStaff is identical to a GrandStaff, except that it supports printing the instrument name directly. For details, see [Instrument names], page 234.

\new PianoStaff \with { instrumentName = "Piano" } <<
    \new Staff \relative { c''1 c }
    \new Staff \relative { \clef bass c1 c }
>>

The OneStaff is a staff group that places separate contexts in the same vertical alignment. This example shows three staves sharing the same space. Here, the Time_signature_engraver has been moved from the staves to the OneStaff context to prevent it from being repeated for each staff.

\layout {\context {\OneStaff \consists Time_signature_engraver }}
    \context {\Staff \remove Time_signature_engraver }
    \context {\DrumStaff \remove Time_signature_engraver }
Each staff group context sets the property `systemStartDelimiter` to one of the following values: `SystemStartBar`, `SystemStartBrace`, or `SystemStartBracket`. A fourth delimiter, `SystemStartSquare`, is also available, but it must be explicitly specified.

New staff group contexts may be defined. For details, see Section 5.1.6 [Defining new contexts], page 669.

Selected Snippets

**Use square bracket at the start of a staff group**

The system start delimiter `SystemStartSquare` can be used by setting it explicitly in a `StaffGroup` or `ChoirStaff` context.

```latex
\score {
  \new StaffGroup { <<
    \set StaffGroup.systemStartDelimiter = #'SystemStartSquare
    \new Staff { c'4 d' e' f' }
    \new Staff { c'4 d' e' f' }
  >> } }
```

**Display bracket with only one staff in a system**

If there is only one staff in one of the staff types `ChoirStaff` or `StaffGroup`, by default the bracket and the starting bar line will not be displayed. This can be changed by overriding `collapse-height` to set its value to be less than the number of staff lines in the staff.

Note that in contexts such as `PianoStaff` and `GrandStaff` where the systems begin with a brace instead of a bracket, another property has to be set, as shown on the second system in the example.
Mensurstriche layout (bar lines between the staves)

*Mensurstriche*, bar lines between but not through staves, can be printed by setting `measureBarType` to "-span!" and using a grouping context that allows span bars, such as `StaffGroup`.

```latex
\layout {
  \context {  
    \Staff 
    measureBarType = "-span!"
  } 
}

\fixed c' {  
  c1  
  d2 \section e2  
  f1 \fine  
}

\new StaffGroup <<  
  \new Staff \music  
  \new Staff \music  
>>
```
 Nested staff groups

Staff-group contexts can be nested to arbitrary depths. In this case, each child context creates a new bracket adjacent to the bracket of its parent group.

\new StaffGroup <<
  \new Staff \relative { c'2 c | c2 c }
\new StaffGroup <<
  \new Staff \relative { g'2 g | g2 g }
  \new StaffGroup \with {
    \systemStartDelimiter = #'SystemStartSquare
  }
  \new Staff \relative { e'2 e | e2 e }
\new Staff \relative { c'2 c | c2 c }
>>
>>
New nested staff group contexts can be defined. For details, see Section 5.1.6 [Defining new contexts], page 669.

Selected Snippets

**Nesting staves**

The property `systemStartDelimiterHierarchy` can be used to make more complex nested staff groups. The command `\set StaffGroup.systemStartDelimiterHierarchy` takes an alphabetical list of the number of staves produced. Before each staff a system start delimiter can be given. It has to be enclosed in brackets and takes as much staves as the brackets enclose. Elements in the list can be omitted, but the first bracket takes always the complete number of staves. The possibilities are `SystemStartBar`, `SystemStartBracket`, `SystemStartBrace`, and `SystemStartSquare`.

```
\new StaffGroup
  \relative c' <<
  \override StaffGroup.SystemStartSquare.collapse-height = #4
  \set StaffGroup.systemStartDelimiterHierarchy
    = #'(SystemStartSquare (SystemStartBrace (SystemStartBracket a
                                (SystemStartSquare b ) ) c ) d)

\new Staff { c1 }
\new Staff { c1 }
\new Staff { c1 }
\new Staff { c1 }
\new Staff { c1 }
\new Staff { c1 }
>>
```

Separating systems

If the number of systems per page changes from page to page it is customary to separate the systems by placing a system separator mark between them. By default the system separator is blank, but can be turned on with a \paper option.

\book {
\score {
\new StaffGroup <<
\new Staff {
\relative {
 c''4 c c c
 \break
 c4 c c c
}
}
\new Staff {
\relative {
 c''4 c c c
 \break
 c4 c c c
}
}
>>
}\paper {
 system-separator-markup = \slashSeparator
 tagline = ##f
}
}

Notation Reference: Section 4.1 [Page layout], page 597.

Snippets: Section “Staff notation” in Snippets.
1.6.2 Modifying single staves

This section explains how to change specific attributes of one staff: for example, modifying the number of staff lines or the staff size. Methods to start and stop staves and set ossia sections are also described.

Staff symbol

The \stopStaff and \startStaff commands can be used to stop or (re)start the staff lines respectively, from being printed at any point within a score.

\relative {
  \stopStaff f''4 d \startStaff g, e
  f'4 d \stopStaff g, e
  f'4 d \startStaff g, e
}

\override Staff.StaffSymbol.line-count = #2
\startStaff g, e |

\relative {
  \stopStaff
  \override Staff.StaffSymbol.line-positions = #'(1 3 5 -1 -3)
  \startStaff g, e |
  \revert Staff.StaffSymbol.line-positions

  \override Staff.StaffSymbol.line-positions = #'(8 6.5 -6 -8 -0.5)
  \startStaff g, e |
}

The number of staff lines can be altered:

The position of each staff line can also be altered. A list of numbers sets each line’s position. 0 corresponds to the normal center line, and the normal line positions are (-4 -2 0 2 4). A single staff line is printed for every value entered so that the number of staff lines, as well as their position, can be changed with a single override (thus, the line-count property is disregarded if line-positions is set).

\relative {
  f''4 d \stopStaff
  \override Staff.StaffSymbol.line-positions = #'(1 3 5 -1 -3)
  \startStaff g, e |
  f'4 d \stopStaff
  \override Staff.StaffSymbol.line-positions = #'(8 6.5 -6 -8 -0.5)
  \startStaff g, e |
}

Predefined commands

\startStaff, \stopStaff.

The lines of a staff belong to the StaffSymbol grob (including ledger lines) and can be modified using StaffSymbol properties, but these modifications must be made before the staff is (re)started.

The number of staff lines can be altered:

The position of each staff line can also be altered. A list of numbers sets each line’s position. 0 corresponds to the normal center line, and the normal line positions are (-4 -2 0 2 4). A single staff line is printed for every value entered so that the number of staff lines, as well as their position, can be changed with a single override (thus, the line-count property is disregarded if line-positions is set).
To preserve typical stem directions (in the bottom half of the staff stems point up, in the top half they point down), align the center line (or space) of the customized staff with the position of the normal center line (0). The clef position and the position of middle C may need to be adjusted accordingly to fit the new lines. See [Clef], page 17.

Staff line thickness can be altered. Ledger lines and note stems, by default, are also affected.

\new Staff { 
  \override StaffSymbol.thickness = #3
} \relative {
  f''4 d g, e
}

It is also possible to set ledger line thickness independently of staff lines.

\new Staff { 
  \override StaffSymbol.thickness = #2
  \override StaffSymbol.ledger-line-thickness = #'(0.5 . 0.4)
} \relative {
  f'''4 a, a,, f
}

The first value is multiplied by the staff line thickness, the second by the staff space and then the two values are added together to give the new thickness of the ledger line.

The vertical positions of ledger lines can be altered,

\new Staff { 
  \override StaffSymbol.ledger-positions = #'(-3 -2 -1 2 5 6)
} \relative {
  f'''4 a, a,, f
}

Additional ledger lines can be made to appear above or below note heads depending on the current position relative to other note heads that also have their own ledger lines.

\new Staff { 
  \override StaffSymbol.ledger-extra = #4
} \relative {
Ledger lines can also be made to appear inside the staff where custom staff lines are required. The example shows the default position of ledger lines when the explicit ledger-position is and is not set. The `\stopStaff` is needed in the example to revert the `\override` for the whole `StaffSymbol`.

\begin{verbatim}
\relative d' { 
   \override Staff.StaffSymbol.line-positions = #'(-8 0 2 4)
   d4 e f g
   \stopStaff
   \startStaff
   \override Staff.StaffSymbol.ledger-positions = #'(-8 -6 (-4 -2) 0)
   d4 e f g
}
\end{verbatim}

The distance between staff lines can be altered. This affects ledger line spacing as well.

\begin{verbatim}
\new Staff \with { 
   \override StaffSymbol.staff-space = #1.5
} \relative { 
   f''''4 d, g, e,
}
\end{verbatim}

The width of a staff can be modified. The units are staff spaces. The spacing of objects inside the staff is not affected by this setting.

\begin{verbatim}
\new Staff \with { 
   \override StaffSymbol.width = #23
} \relative { a4 e' f b | d1 }
\end{verbatim}

Selected Snippets
Making some staff lines thicker than the others

For educational purposes, a staff line can be thickened (e.g., the middle line, or to emphasize the line of the G clef). This can be achieved by adding extra lines very close to the line that should be emphasized, using the line-positions property of the StaffSymbol object.

```latex
\{ 
\override Staff.StaffSymbol.line-positions =
\#'(\-4 \-2 \-0.2 \ 0 \ 0.2 \ 2 \ 4)
d'4 e' f' g'
\}
```

Ossia staves

Ossia staves can be set by creating a new simultaneous staff in the appropriate location:

```latex
\new Staff \relative { 
c''4 b d c
<<
\{ c4 b d c \}
\new Staff \{ e4 d f e \}
>>
c4 b c2
}
```

However, the above example is not what is usually desired. To create ossia staves that are above the original staff, have no time signature or clef, and have a smaller font size, tweaks must be used. The Learning Manual describes a specific technique to achieve this goal, beginning with Section “Nesting music expressions” in Learning Manual.

The following example uses the alignAboveContext property to align the ossia staff. This method is most appropriate when only a few ossia staves are needed.

```latex
\new Staff = "main" \relative { 
c''4 b d c
<<
\{ c4 b d c \}
```
If many isolated ossia staves are needed, creating an empty Staff context with a specific context id may be more appropriate; the ossia staves may then be created by calling this context and using \startStaff and \stopStaff at the desired locations. The benefits of this method are more apparent if the piece is longer than the following example.

\new Staff \with { 
  \remove Time_signature_engraver 
  \alignAboveContext = "main"
  \magnifyStaff #2/3
  \firstClef = ##f
} 
{ e4 d f e } 
\break 
c4 b c2
}

\new Staff \relative { 
c'4 b c2 
<< 
  \context Staff = "ossia" { 
    \startStaff e4 g8 f e2 \stopStaff
  }
  \break 
g4 a g2 
<< 
  \context Staff = "ossia" { 
    \startStaff g4 e8 f g2 \stopStaff
  }
  \break 
e4 d c2
}
Using the `\RemoveAllEmptyStaves` command to create ossia staves may be used as an alternative. This method is most convenient when ossia staves occur immediately following a line break. For more information about `\RemoveAllEmptyStaves`, see [Hiding staves], page 229.

```
\new Staff = "ossia" \with {
  \remove Time_signature_engraver
  \hide Clef
  \magnifyStaff #2/3
  \RemoveAllEmptyStaves
} \relative {
  R1*3
  c''4 e8 d c2
}
\new Staff \relative {
  c'4 b c2
  e4 f e2
  g4 a g2 \break
  c4 b c2
  g4 a g2
  e4 d c2
}
```

**Selected Snippets**

*Vertically aligning ossias and lyrics*

This snippet demonstrates the use of the context properties `alignBelowContext` and `alignAboveContext` to control the positioning of lyrics and ossias.

```
\paper {
```
**ragged-right** = ##t

\relative c' <<
\new Staff = "1" { c4 c s2 }
\new Staff = "2" { c4 c s2 }
\new Staff = "3" { c4 c s2 }
{ \skip 2
<<
\lyrics {
\set alignBelowContext = #'1
lyrics4 below
}
\new Staff \with {
alignAboveContext = #'3
fontSize = #-2
\override StaffSymbol.staff-space = #(magstep -2)
\remove "Time_signature_engraver"
}
\tuplet 6/4 {
\override TextScript.padding = #3
c8["ossia above" d e d e f]
}
>>
}

Hiding staves

Staff lines can be hidden by removing the Staff_symbol_engraver from the Staff context. As an alternative, \stopStaff may be used.

\new Staff \with {
  \remove Staff_symbol_engraver
}
\relative { a''8 f e16 d c b a2 }

\begin{music}
\relative <<
\new Staff {
  e'4 f g a \break
  b1 \break
  a4 b c2
}
\new Staff {
  c,4 d e f \break
  R1 \break
  f4 g c,2
}
\end{music}

Empty staves can be hidden (for a so-called ‘Frenched Score’) by applying the \RemoveEmptyStaves command on a context, which can be done globally (in a \layout block) as well as for specific staves only (in a \with block). This command removes all empty staves in a score except for those in the first system. If you want those in the first system to be hidden also, use \RemoveAllEmptyStaves.

\layout {
  \context {
    \Staff
    \RemoveEmptyStaves
  }
}

\relative <<
\new Staff {
  e'4 f g a \break
  b1 \break
  a4 b c2
}
\new Staff {
  c,4 d e f \break
  R1 \break
  f4 g c,2
}
\end{music}
A staff is considered empty when it contains only multi-measure rests, rests, skips, or a combination of these elements. All other musical objects (that cause a staff not to be considered as empty) are listed in the keepAliveInterfaces context property, as initially set in the ly/engraver-init.ly file.

\RemoveEmptyStaves and \RemoveAllEmptyStaves are both predefined shortcuts that set such properties as remove-empty and remove-first for the VerticalAxisGroup object, as explained in Section A.22 [Context modification identifiers], page 846.

The Keep_alive_together_engraver allows groups of staves to only be removed together and not individually. By default, it is part of the PianoStaff context: a piano part will only be hidden when both of its staves are empty. Similarly, a common engraving practice in orchestral scores is to remove empty groups of staves rather than individual staves; that can be achieved by adding the Keep_alive_together_engraver to the relevant staff grouping context, as explained Section 5.1.4 [Modifying context plug-ins], page 663, (see [Grouping staves], page 215, for the context names).

In the following example, staves devoted to wind instruments are removed in the second system; however, the double bass is not, because it is part of the larger group of fretted strings, which is playing.
The `Keep_alive_together_engraver` internally uses the `remove-layer` property of a staff’s `VerticalAxisGroup` to decide whether to print it or not when it is considered empty. That property may also be set directly, in which case it acts as a priority index: values closest to zero take precedence over higher numbers, and thus staves whose `remove-layer` is higher will be masked in favor of staves of a lower number.
This is particularly useful for ‘divisi’ staves, where some individual parts (see Section 1.6.3 [Writing parts], page 234) occasionally need to be expanded to more than one staff. In the following example, two parts are routed to three staves; however, all three staves are never printed at the same time:

- in the first systems, only a single one of them is shown, as the keepAliveInterfaces property has been set to an empty list – therefore the other two staves are considered empty and thus hidden, regardless of what they may contain;
- when that property gets unset (and thus reverts to its default setting), it is no longer preventing the two other staves from being printed; however, as their remove-layer setting is lower than the single staff’s, these two staves are now printed in its place.

Such substitutions are applied not just to notes, chords and other musical events that occur immediately after the new setting, but to the whole system where it takes place.

```latex
\layout {
  short-indent = 2\text{cm}
  indent = 3\text{cm}
}\context {
\Staff
  keepAliveInterfaces = #'()
}\}

\new Staff \with {
  \keepAlive_together_engraver
  \instrumentName = "Violins"
  \shortInstrumentName = "V I & II"
  \override VerticalAxisGroup.remove-layer = 2
}\ << \new Staff \with {
  \instrumentName = "Violin I"
  \shortInstrumentName = "V I"
  \RemoveAllEmptyStaves
  \override VerticalAxisGroup.remove-layer = 1
}\ \new Staff \with {
  \instrumentName = "Violin II"
  \shortInstrumentName = "V II"
}\}
```
\RemoveAllEmptyStaves
\override VerticalAxisGroup.remove-layer = 1
} \ violII

\RemoveAllEmptyStaves can also be used to create ossia sections for a staff. For details, see [Ossia staves], page 225.

**Predefined commands**
\RemoveEmptyStaves, \RemoveAllEmptyStaves.

Chapter 1: Musical notation

234

Known issues and warnings
Removing Staff_symbol_engraver also hides bar lines. If bar line visibility is forced, formatting errors may occur. In this case, use the following overrides instead of removing the engraver:

\omit StaffSymbol
\override NoteHead.no-ledgers = ##t

For the Known issues and warnings associated with \RemoveEmptyStaves see Section 5.1.5 [Changing context default settings], page 664.

1.6.3 Writing parts
This section explains how to prepare parts for orchestral or ensemble music, which often requires to insert instrument names into the score. Methods to quote other voices and to format cue notes are also described, as well as a way to contract multiple consecutive empty measures in individual parts.

Additionally, a method for printing divisi staves, sometimes used in individual or desk parts, can be found in [Hiding staves], page 229.

Instrument names
Instrument names can be printed on the left side of staves in the Staff, PianoStaff, StaffGroup, GrandStaff and ChoirStaff contexts. The value of instrumentName is used for the first staff, and the value of shortInstrumentName is used for all succeeding staves.

\new Staff \with {
  instrumentName = "Violin ",
  shortInstrumentName = "Vln. "
} \relative {
  c'4.. g'16 c4.. g'16 \break | c1 |
}

Violin

\markup can be used to create more complex instrument names:

\new Staff \with {
  instrumentName = \markup {
    \column { "Clarinetti"
    \line { "in B" \smaller \flat }
  }
} \relative {
  c''4 c,16 d e f g2
}

Clarinetti

in B
When two or more staff contexts are grouped together, the instrument names and short instrument names are centered by default. To center multi-line instrument names, \center-column must be used:

```
<<
\new Staff \with {
  instrumentName = "Flute"
} \relative {
  f''2 g4 f
}
\new Staff \with {
  instrumentName = \markup {
    \center-column { "Clarinet"
    \line { "in B" \smaller \flat }
  }
} \relative { c''4 b c2 }
>>
```

However, if the instrument names are longer, the instrument names in a staff group may not be centered unless the indent and short-indent settings are increased. For details about these settings, see [\paper variables for shifts and indents], page 604.

```
<<
\new Staff \with {
  instrumentName = "Alto Flute in G"
  shortInstrumentName = "Flt."
} \relative {
  f''2 g4 f \break
  g4 f g2
}
\new Staff \with {
  instrumentName = "Clarinet"
  shortInstrumentName = "Clar."
} \relative {
  c''4 b c2 \break
  c2 b4 c
}
>>
```

```
\layout {
  indent = 3.0\cm
  short-indent = 1.5\cm
}
```
To add instrument names to other contexts (such as ChordNames or FiguredBass), Instrument_name_engraver must be added to that context. For details, see Section 5.1.4 [Modifying context plug-ins], page 663.

The shortInstrumentName may be changed in the middle of a piece, along with other settings as needed for the new instrument. However, only the first instance of instrumentName will be printed and subsequent changes will be ignored:

\begin{verbatim}
prepPiccolo = \>\markup \italic { muta in Piccolo }

prepFlute = \>\markup \italic { muta in Flauto }

setPiccolo = {
  \>\markup \bold { Piccolo }
  \transposition c''
}

setFlute = {
  \>\markup \bold { Flute }
  \transposition c'
}

\new Staff \with {
  instrumentName = "Flute"
  shortInstrumentName = "Flt."
}
\relative {
  g'1 g g g \break
g1 g \prepPiccolo R R \break
  \set Staff.instrumentName = "Piccolo"
  \set Staff.shortInstrumentName = "Picc."
  \setPiccolo
g1 g g g \break
g1 g \prepFlute R R \break
  \set Staff.instrumentName = "Flute"
  \set Staff.shortInstrumentName = "Flt."
  \setFlute
g1 g g g
}
\end{verbatim}
It is very common for one voice to use the same notes as those from another voice. For example, first and second violins playing the same phrase during a particular passage of the music. This is done by letting one voice quote the other, without having to reenter the music all over again for the second voice.

The \addQuote command, used in the top level scope, defines a stream of music from which fragments can be quoted.

The \quoteDuring command is used to indicate the point where the quotation begins. It is followed by two arguments: the name of the quoted voice, as defined with \addQuote, and a music expression for the duration of the quote.

\begin{verbatim}
fluteNotes = \relative { 
a'4 gis g gis | b4"quoted" r8 ais\p a4( f)
}

oboNotes = \relative { 
c''4 cis c b \quoteDuring "flute" { s1 }
}
\addQuote "flute" { \fluteNotes }
\addQuote "oboe" { \oboeNotes }

\score { 
  << 
    \new Staff \with { instrumentName = "Flute" } \fluteNotes 
    \new Staff \with { instrumentName = "Oboe" } \oboeNotes 
  >>
\end{verbatim}
If the music expression used in \quoteDuring contains notes instead of spacer or multi-measure rests then the quote will appear as polyphony and may produce unexpected results.

```latex
fluteNotes = \relative {
  a'4 gis g gis | b4"quoted" r8 ais\p a4( f)
}

oboNotes = \relative {
  c''4 cis c b \quoteDuring "flute" { e4 r8 ais b4 a}
}

\addQuote "flute" { \fluteNotes }

\score {
  \addStaff {
    \new Staff \with { instrumentName = "Flute" } \fluteNotes
  }
  \addStaff {
    \new Staff \with { instrumentName = "Oboe" } \oboNotes
  }
}
```

If an \unfoldRepeats command in a music expression is required to be printed when using \quoteDuring, then it too must also contain its own \unfoldRepeats command;

```latex
fluteNotes = \relative {
  \repeat volta 2 { a'4 gis g gis }
}

oboNotesDW = \relative {
  \repeat volta 2 \quoteDuring "incorrect" { s1 }
}

oboNotesW = \relative {
  \repeat volta 2 \quoteDuring "correct" { s1 }
}
```
\addQuote "incorrect" { \fluteNotes }

\addQuote "correct" { \unfoldRepeats \fluteNotes }

\score { \unfoldRepeats
  \new Staff \with { instrumentName = "Flute" } \fluteNotes
  \new Staff \with { instrumentName = "Oboe (incorrect)" } \oboeNotesDW
  \new Staff \with { instrumentName = "Oboe (correct)" } \oboeNotesW
  >>
}

The \quoteDuring command uses the \transposition settings of both quoted and quoting parts to produce notes for the quoting part that have the same sounding pitch as those in the quoted part.

\begin{verbatim}
clarinetNotes = \relative c'' { \transposition bes \key d \major
  b4 ais a ais | cis4"quoted" r8 bis\p b4( f)
}

oboeNotes = \relative { c''4 cis c b \quoteDuring "clarinet" { s1 }

\end{verbatim}

\addQuote "clarinet" { \clarinetNotes }

\score {
  <<
    \new Staff \with { instrumentName = "Clarinet" } \clarinetNotes
    \new Staff \with { instrumentName = "Oboe" } \oboeNotes
  >>
}
By default quoted music will include all articulations, dynamics, markups, etc., in the quoted expression. It is possible to choose which of these objects from the quoted music are displayed by using the quotedEventTypes context property.

```lilypond
\addQuote "flute" { \fluteNotes }
```

Quotes can also be tagged, see [Using tags], page 566.

See also

Notation Reference: [Instrument transpositions], page 27, [Using tags], page 566.

Installed Files: scm/define-event-classes.scm.

Snippets: Section “Staff notation” in Snippets.

Internals Reference: Section “Music classes” in Internals Reference, Section “QuoteMusic” in Internals Reference, Section “Voice” in Internals Reference.
Known issues and warnings

Only the contents of the first Voice occurring in an \addQuote command will be considered for quotation, so if the music expression contains \new or \context Voice statements, their contents will not be quoted. Quoting grace notes is unsupported and may cause LilyPond to crash whereas quoting nested triplets may result in poor notation.

Formatting cue notes

The simplest way to format cue notes is to explicitly create a CueVoice context within the part.

```
\relative {
R1
<<
  { e'2\rest r4. e8 }
  \new CueVoice {
    \stemUp d'8"flute" c d e fis2
  }
} >>
d,,4 r a r
```

The \cueClef command can also be used with an explicit CueVoice context if a change of clef is required and will print an appropriately sized clef for the cue notes. The \cueClefUnset command can then be used to switch back to the original clef, again with an appropriately sized clef.

```
\relative {
\clef "bass"
R1
<<
  { e'2\rest r4. \cueClefUnset e,8 }
  \new CueVoice {
    \cueClef "treble" \stemUp d'8"flute" c d e fis2
  }
} >>
d,,4 r a r
```

The \cueClef and \cueClefUnset command can also be used without a CueVoice if required.

```
\relative {
\clef "bass"
R1
\cueClef "treble"
d'8"flute" c d e fis2
\cueClefUnset
d,,4 r a r
```
Chapter 1: Musical notation

For more complex cue note placement, e.g. including transposition, or inserting cue notes from multiple music sources, the \texttt{\onameDuring{} or \onameDuringWithClef} commands can be used. These are more specialized forms of \texttt{\quoteDuring{}}, see [Quoting other voices], page 237, in the previous section.

The syntax is:

\begin{verbatim}
\onameDuring{} \oname \onameDirection{} \onameMusic{}
\end{verbatim}

and

\begin{verbatim}
\onameDuringWithClef{} \oname \onameDirection{} \onameClef{} \onameMusic{}
\end{verbatim}

The music from the corresponding measures of the \texttt{\oname{} name} is added as a \texttt{CueVoice} context and occurs simultaneously with the \texttt{music}, which then creates a polyphonic situation. The \texttt{\onameDirection{}} takes the argument \texttt{UP} or \texttt{DOWN}, and corresponds to the first and second voices respectively, determining how the cue notes are printed in relation to the other voice.

\begin{verbatim}
fluteNotes = \relative {}
    r2. c''4 | d8 c d e fis2 | g2 d |
}\end{verbatim}

\begin{verbatim}
oboeNotes = \relative c''{}
    R1
    <>"\markup \tiny { flute }
    \onameDuring{} "flute" \onameDirection{} \onameClef{} \onameMusic{}
    g2 c,\end{verbatim}

\begin{verbatim}
\addQuote{} \oname{} \onameNotes{}
\end{verbatim}

\begin{verbatim}
\new Staff {}
    \onameNotes{}
\end{verbatim}

It is possible to adjust which aspects of the music are quoted with \texttt{\onameDuring{} by setting the \texttt{\onameQuoteEventTypes} property. Its default value is '(note-event rest-event tie-event beam-event tuplet-span-event), which means that only notes, rests, ties, beams and tuplets are quoted, but not articulations, dynamic marks, markup, etc.

\begin{verbatim}
\startextract
\addNote\oname{}
\endextract
\end{verbatim}

Note: When a \texttt{Voice} starts with \texttt{\onameDuring{} as in the following example, the \texttt{Voice} context must be explicitly declared, or else the entire music expression would belong to the \texttt{CueVoice} context.

\begin{verbatim}
oboeNotes = \relative{}
    r2 r8 d''16(f f e g f a)
    g8 g16 g g2.
\end{verbatim}
Chapter 1: Musical notation

\addQuote "oboe" \{ oboeNotes \}

\new Voice \relative c'' \{
  \set Score.quotedCueEventTypes = #'(note-event rest-event tie-event
  beam-event tuplet-span-event
  dynamic-event slur-event)

  \cueDuring "oboe" #UP \{ R1 \}
  g2 c,
\}

\new Voice \relative c'' \{
  \set Score.quotedCueEventTypes = #'(note-event rest-event tie-event
  beam-event tuplet-span-event
  dynamic-event slur-event)

  \cueDuring "flute" #UP \{ R1 \}
  r2. c''4 d8 c d e fis2 g2 d2
\}

Alternative, the \cueDuringWithClef function can be used instead. This command takes
an extra argument to specify the change of clef that needs to be printed for the cue notes but
will automatically print the original clef once the cue notes have finished.

\fluteNotes = \relative \{
  r2. c''4 d8 c d e fis2 g2 d2
\}

\bassoonNotes = \relative c \{
  \clef bass
  R1
  \clef treble
  <>\markup \tiny \{ flute \}
  \cueDuring "flute" #UP \{ R1 \}
  \clef bass
  g4. b8 d2
\}

\addQuote "flute" \{ \fluteNotes \}

\new Staff \{
  \fluteNotes
  \bassoonNotes
\}

Markup can be used to show the name of the quoted instrument. If the cue notes require a
change in clef, this can be done manually but the original clef should also be restored manually
at the end of the cue notes.

\fluteNotes = \relative \{
  r2. c''4 d8 c d e fis2 g2 d2
\}

\bassoonNotes = \relative c \{
  \clef bass
  R1
  \clef treble
  <>\markup \tiny \{ flute \}
  \cueDuring "flute" #UP \{ R1 \}
  \clef bass
  g4. b8 d2
\}

\addQuote "flute" \{ \fluteNotes \}

\new Staff \{
  \fluteNotes
  \bassoonNotes
\}
Like \quoteDuring, \cueDuring takes instrument transpositions into account. Cue notes are produced at the pitches that would be written for the instrument receiving the cue to produce the sounding pitches of the source instrument.

To transpose cue notes differently, use \transposedCueDuring. This command takes an extra argument to specify (in absolute mode) the printed pitch that you want to represent the sound of a concert middle C. This is useful for taking cues from an instrument in a completely different register.

\begin{verbatim}
\addQuote "piccolo" { \piccoloNotes }
<<
  \new Staff \piccoloNotes
  \new Staff \bassClarinetNotes
>>
\end{verbatim}
The `\killCues` command removes cue notes from a music expression, so the same music expression can be used to produce the instrument part with cues and the score. The `\killCues` command removes only the notes and events that were quoted by `\cueDuring`. Other markup associated with cues, such as clef changes and a label identifying the source instrument, can be tagged for selective inclusion in the score; see [Using tags], page 566.

\begin{verbatim}
fluteNotes = \relative {
  r2. c'4 d8 c d e fis2 g2 d2
}

bassoonNotes = \relative c {
  \clef bass
  R1
  \tag #'part {
    \clef treble
    <> "\markup \tiny { flute }
  }
  \cueDuring "flute" #UP { R1 }
  \tag #'part \clef bass
g4. b8 d2
}

\addQuote "flute" { \fluteNotes }

\new Staff {
  \bassoonNotes
}

\new StaffGroup <<
  \new Staff {
    \fluteNotes
  }
  \new Staff {
    \removeWithTag #'part { \killCues { \bassoonNotes } }
  }
>>
\end{verbatim}

\begin{figure}[h]
\centering
\includegraphics[width=\textwidth]{example.png}
\caption{Example music notation with cues removed.}
\end{figure}

\textbf{See also}

Notation Reference: [Quoting other voices], page 237, [Instrument transpositions], page 27, [Instrument names], page 234, [Clef], page 17, [Musical cues], page 358, [Using tags], page 566.

Snippets: Section “Staff notation” in \textit{Snippets}.
Internals Reference: Section “CueVoice” in Internals Reference, Section “Voice” in Internals Reference.

Known issues and warnings
Collisions can occur with rests, when using \cueDuring, between Voice and CueVoice contexts. When using \cueDuringWithClef or \transposedCueDuring the extra argument required for each case must come after the quote and the direction.

Compressing empty measures
By default, all measures are printed even if they are empty – which can happen if a rhythmic event (such as notes, rests or invisible rests) is so long as to span several measures. This behavior can be changed by contracting all empty measures into a single one, as illustrated here (the second part of this example, with expanded measures, actually reverts back to the default behavior):

\override Score.BarNumber.break-visibility = ##(#f #t #t)
\time 2/4
\compressEmptyMeasures
c’1 d’1. e’\breve
\bar "||"
\expandEmptyMeasures
c’1 d’1. e’\breve

Although that notation is syntactically correct, it may be confusing from a musical point of view, as illustrated in the previous example; hence the need for measure numbers to be explicitly printed, using the syntax described in [Using break-visibility], page 702.

Where such a notation may become more useful is when applied to [Full measure rests], page 66. A multi-measure rest will then be shown as a single measure containing a multi-measure rest symbol, with the number of measures of rest printed above the measure:

% Default behavior
\time 3/4 r2. | R2.*2 |
\time 2/4 R2 |
\time 4/4
% Rest measures contracted to single measure
\compressEmptyMeasures
r1 | R1*17 | R1*4 |
\expandEmptyMeasures
% Rest measures expanded again
\time 3/4
R2.*2 |

\override Score.BarNumber.break-visibility = ##(#f #t #t)
\time 2/4
\compressEmptyMeasures
c’1 d’1. e’\breve
\bar "||"
\expandEmptyMeasures
c’1 d’1. e’\breve
Unlike \compressEmptyMeasures, the music function \compressMMRests will only apply to rests, leaving any other events uncompressed. As a function rather than a property setting, its syntax differs slightly in that it must be followed by a music expression:

\compressMMRests {
% Rests are compressed...
R1*7
% ... but notes can still span multiple measures.
g'1 a'1*2 d'1
R1*2
}

All of the commands described in this section actually rely on the skipBars internal property, which is set in the Score context as explained in Section 5.3.2 [The \set command], page 677.

Predefined commands
\compressEmptyMeasures, \expandEmptyMeasures, \compressMMRests.

Selected Snippets

\compressEmptyMeasures, \compressMMRests

Changing form of multi-measure rests
If there are ten or fewer measures of rests, a series of longa and breve rests (called in German “Kirchenpausen” - church rests) is printed within the staff; otherwise a simple line is shown. This default number of ten may be changed by overriding the expand-limit property.

\relative c'' {
\compressMMRests {
R1*2 | R1*5 | R1*9
\override MultiMeasureRest.expand-limit = #3
See also

Notation Reference: [Using break-visibility], page 702, [Full measure rests], page 66, Section 5.3.2 [The \set command], page 677.

Internals Reference: Section “MultiMeasureRest” in Internals Reference, Section “MultiMeasureRestNumber” in Internals Reference, Section “MultiMeasureRestScript” in Internals Reference, Section “MultiMeasureRestText” in Internals Reference.

1.7 Editorial annotations

This section discusses the various ways to change the appearance of notes and add analysis or educational emphasis.

1.7.1 Inside the staff

This section discusses how to add emphasis to elements that are inside the staff.

Selecting notation font size

Note:
For font sizes of text, see [Selecting font and font size], page 291.
For staff size, see Section 4.2.2 [Setting the staff size], page 610.
For cue notes, see [Formatting cue notes], page 241.
For ossia staves, see [Ossia staves], page 225.

To change the size of the notation without changing the staff size, specify a magnification factor with the \magnifyMusic command:

\new Staff <<
\new Voice \relative {
\voiceOne
\new Voice \relative {
  \voiceTwo
  \magnifyMusic 0.63 {
    \override Score.SpacingSpanner.spacing-increment = #(* 1.2 0.63)
    r32 c'' a c a c r c a c a c c
    r c a c a c a c a c a c c
  }
}
>>
\new Staff <<
  \key fis \minor
  \mergeDifferentlyDottedOn
  \new Voice \relative {
    \voiceOne
    \magnifyMusic 0.63 {
      \override Score.SpacingSpanner.spacing-increment = #(* 1.2 0.63)
      \once \normalsize cis'32( cis' gis b a fis
      \once \normalsize d d'
      \once \normalsize cis, cis' gis b a gis
      \once \normalsize fis fis'
      \once \normalsize fis, fis' ais, cis b gis
      \once \normalsize eis eis'
      \once \normalsize a, a' bis, d cis b
      \once \normalsize gis gis')
    }
  }
  \new Voice \relative {
    \voiceTwo
    cis'8. d16 cis8. fis16 fis8. eis16 a8. gis16
  }
} >>

The \override in the example above is a bug workaround. See the “Known issues and warnings” at the end of this section.

If a normal sized note head is merged with a smaller one, the size of the smaller note may need to be reset (with \once \normalsize) so that the stems and accidentals align properly:
The `\magnifyMusic` command is not intended for cue notes, grace notes, or ossia staves—there are more appropriate methods of entering each of those constructs. Instead, it is useful when the notation size changes in a single instrumental part on one staff, and where grace notes are not appropriate, such as in cadenza-like passages or in cases such as the above examples. Setting the `\magnifyMusic` value to 0.63 duplicates the dimensions of the `CueVoice` context.

**Note:** The `\magnifyMusic` command should not be used when also resizing the staff. See Section 4.2.2 [Setting the staff size], page 610.

### Resizing individual layout objects

An individual layout object can be resized by using the `\tweak` or `\override` commands to adjust its `font-size` property:

```latex
relative {
\tweak font-size -4 b e>-5
\tweak font-size 0 -3
\override Accidental.font-size = -4 bes!-^
\override Script.font-size = 4 bes!-^}
```

The default `font-size` value for each layout object is listed in the Internals Reference. The `font-size` property can only be set for layout objects that support the `font-interface` layout interface. If `font-size` is not specified in the object’s ‘Standard settings’ list, its value is 0. See Section “All layout objects” in Internals Reference.

### Understanding the `fontSize` property

The `fontSize` context property adjusts the relative size of all glyph-based notational elements in a context:

```latex
relative {
\time 3/4
d''4--5 c8{ b a g } |
\set fontSize = -6
e'4-- c!8-4{ b a g } |
\set fontSize = 0
fis4--3 e8( d ) fis4 |
g2.
}
```

The `fontSize` value is a number indicating the size relative to the standard size for the current staff height. The default `fontSize` is 0; adding 6 to any `fontSize` value doubles the
The printed size of the glyphs, and subtracting 6 halves the size. Each step increases the size by approximately 12%.

The scheme function `magnification->font-size` is provided for convenience since the logarithmic units of the `font-size` property are not entirely intuitive. For example, to adjust the musical notation to 75% of the default size, use:

```
\set fontSize = #(magnification->font-size 0.75)
```

The scheme function `magstep` does the opposite: it converts a `font-size` value into a magnification factor.

The `fontSize` property will only affect notational elements that are drawn with glyphs, such as note heads, accidentals, scripts, etc. It will not affect the size of the staff itself, nor will it scale stems, beams, or horizontal spacing. To scale stems, beams, and horizontal spacing along with the notation size (without changing the staff size), use the `\magnifyMusic` command discussed above. To scale everything, including the staff size, see Section 4.2.2 [Setting the staff size], page 610.

Whenever the `fontSize` context property is set, its value is added to the value of the `font-size` grob property for individual layout objects, before any glyphs are printed. This can cause confusion when setting individual `font-size` properties while `fontSize` is already set:

```
% the default font-size for NoteHead is 0
% the default font-size for Fingering is -5
c''4-3
\set fontSize = -3
% the effective font size for NoteHead is now -3
% the effective font size for Fingering is now -8
c''4-3
\override Fingering.font-size = 0
% the effective font size for Fingering is now -3
c''4-3
```

The following shorthand commands are also available:

<table>
<thead>
<tr>
<th>Command</th>
<th>Equivalent to</th>
<th>Relative size</th>
</tr>
</thead>
<tbody>
<tr>
<td>\teeny</td>
<td>\set fontSize = -3</td>
<td>71%</td>
</tr>
<tr>
<td>\tiny</td>
<td>\set fontSize = -2</td>
<td>79%</td>
</tr>
<tr>
<td>\small</td>
<td>\set fontSize = -1</td>
<td>89%</td>
</tr>
<tr>
<td>\normalsize</td>
<td>\set fontSize = 0</td>
<td>100%</td>
</tr>
<tr>
<td>\large</td>
<td>\set fontSize = 1</td>
<td>112%</td>
</tr>
<tr>
<td>\huge</td>
<td>\set fontSize = 2</td>
<td>126%</td>
</tr>
</tbody>
</table>

```
\relative c' {\set fontSize = -3 c4.-> d8---3 \set fontSize = -2 c4.-> d8---3 \set fontSize = -1 c4.-> d8---3 \set fontSize = 0 \set fontSize = 1 \set fontSize = 2
```

The following shorthand commands are also available:
Font size changes are achieved by scaling the design size that is closest to the desired size. The standard font size (for font-size = 0) depends on the standard staff height. For a 20pt staff, an 11pt font is selected.

Predefined commands
\magnifyMusic, \teeny, \tiny, \small, \normalsize, \large, \huge.

See also
Notation Reference: [Selecting font and font size], page 291, Section 4.2.2 [Setting the staff size], page 610, [Formatting cue notes], page 241, [Ossia staves], page 225.

Snippets: Section “Editorial annotations” in Snippets.

Internals Reference: Section “font-interface” in Internals Reference.

Known issues and warnings
There are currently two bugs that are preventing proper horizontal spacing when using \magnifyMusic. There is only one available workaround, and it is not guaranteed to work in every case. In the example below, replace the mag variable with your own value. You may also try removing one or both of the \newSpacingSection commands, and/or the \override and \revert commands:

\magnifyMusic mag { \newSpacingSection \override Score.SpacingSpanner.spacing-increment = #(\times #\times 1.2 mag) [music] \revertSpacingSpanner.

Markup texts or strings may be used for finger changes.
\relative { c'4-1 d-2 f4 e-3 }

Fingering instructions
Fingering instructions can be entered using ‘note-digit’:
\relative { c'4-1 d-2 f4 e-3 }

Mark up texts or strings may be used for finger changes.
\relative {
    c'4-1 d-2 f\finger \markup \tied-lyric "4-3" c\finger "2 - 3" }
A thumb fingering can be added (e.g., cello music) to indicate that a note should be played with the thumb.
\relative { <a' \_\thumb a'\text{-3}>2 <b' \_\thumb b'\text{-3}> }

Fingerings for chords can also be added to individual notes by adding them after the pitches.
\relative {
    <c''\text{-1} e\text{-2} g\text{-3} b\text{-5}>2 <d\text{-1} f\text{-2} a\text{-3} c\text{-5}>
}

Fingering instructions may be manually placed above or below the staff, see Section 5.4.1 [Direction and placement], page 690.

Selected Snippets

**Controlling the placement of chord fingerings**

The placement of fingering numbers can be controlled precisely. For fingering orientation to apply, it must be used within a chord construct $<$>, even for single notes. Orientation for string numbers and right-hand fingerings may be set in a similar way.
\relative c' {
    \set fingeringOrientations = #'(left)
    <c\text{-1} e\text{-3} a\text{-5}>4
    \set fingeringOrientations = #'(down)
    <c\text{-1} e\text{-3} a\text{-5}>4
    \set fingeringOrientations = #'(down right up)
    <c\text{-1} e\text{-3} a\text{-5}>4
    \set fingeringOrientations = #'(up)
    <c\text{-1} e\text{-3} a\text{-5}>4
    \set fingeringOrientations = #'(left)
    <c\text{-1}>2
    \set stringNumberOrientations = #'(up left down)
    <f\text{3} a\text{1}2 c\text{1}>1
    \set strokeFingerOrientations = #'(down right up)
    <c\rightHandFinger #1 e\rightHandFinger #2 c\rightHandFinger #4 >
}
Allowing fingerings to be printed inside the staff

By default, vertically oriented fingerings are positioned outside the staff; that behavior, however, may be disabled. Attention needs to be paid to situations where fingerings and stems are in the same direction: by default, fingerings will avoid only beamed stems. That setting can be changed to avoid no stems or all stems; the following example demonstrates these two options, as well as how to go back to the default behavior.

\relative c' {
    <c-1 e-2 g-3 b-5>2
    \override Fingering.staff-padding = #'() \\
    <c-1 e-2 g-3 b-5>4 g'-0 \\
    a8[-1 b]-2 g-0 r \\
    \override Fingering.add-stem-support = ##f \\
    a[-1 b]-2 g-0 r \\
    \override Fingering.add-stem-support = ##t \\
    a[-1 b]-2 g-0 r \\
    \override Fingering.add-stem-support = #only-if-beamed \\
    a[-1 b]-2 g-0 r
}

Snippets: Section “Editorial annotations” in Snippets.

Gliding fingers

For stringed instruments a gliding finger is often indicated by a line connecting the same finger to be used for notes played at different positions on the same string. This line is initiated with \glide entered before a Fingering and ends with the next occurrence of the same finger. The line may be printed in various styles.

\set fingeringOrientations = #'(right)
\set fingeringOrientations = #'(left)
If style is set to 'bow the direction of the bow may be adjusted using direction modifiers.

{  
\set fingeringOrientations = #'(down)  
<\b\glide-1>4 <d'-1>  
\set fingeringOrientations = #'(up)  
<e'' \glide-2> <c''-2>  

\set fingeringOrientations = #'(down)  
<\b''\glide-1>4 <d'-1>  
\set fingeringOrientations = #'(up)  
<e'''' \glide-2> <c'''-2>  

\set fingeringOrientations = #'(down)
If the Finger_glide_engraver is moved to Staff context Fingering grobs from different Voice contexts may be connected.

\score { 
\new Staff << 
\new Voice { 
\voiceOne 
\set fingeringOrientations = #'(right) 
<e''-3>2 
\set fingeringOrientations = #'(left) 
<d''-\tweak bound-details.left.padding #2.5 \glide-2> 
<c''-2> 
\bar "||" 
} 
\new Voice { 
\voiceTwo 
\set fingeringOrientations = #'(right) 
<c''-\glide-2> 
\set fingeringOrientations = #'(left) 
<b'-\tweak bound-details.left.padding #2.5 \glide-4> 
<a'-4> 
} >> 
\layout { 
ragged-right = ##f 
\context { 
\Voice 
\remove Finger_glide_engraver 
} 
\context { 
\Staff 
\consists Finger_glide_engraver 
} 
} 
}

See also

Notation Reference: Section 5.4.1 [Direction and placement], page 690.
Internals Reference: Section “FingeringGlideEvent” in Internals Reference, Section “fingering-glide-event” in Internals Reference, Section “Finger_glide_engraver” in Internals Ref-
derence, Section “finger-glide-interface” in Internals Reference, Section “FingerGlideSpanner” in Internals Reference.

Known issues and warnings
Multiple glides with the same finger are not supported and lead to unexpected results. A workaround is to use different fingers and to use \tweak text.

\{ 
  \clef "G.8"
  <a\glide-1 cis'\glide-1>2 <bes-1 d'-1>
  <a\glide-1 cis'\glide-tweak text "1"-2>2
  <bes-1 d'-\tweak text "1"-2>
\}

Hidden notes
Hidden (or invisible or transparent) notes can be useful in preparing theory or composition exercises.

\relative { 
  c'4 d 
  \hideNotes e4 f 
  \unHideNotes g a 
  \hideNotes b 
  \unHideNotes c 
}

Note heads, stems, and flags, and rests are invisible. Beams are invisible if they start on a hidden note. Objects that are attached to invisible notes are still visible.

\relative c' { 
  e8(\p f g a)--
  \hideNotes e8(\p f g a)--
}

Predefined commands
\hideNotes, \unHideNotes.
See also

Notation Reference: [Invisible rests], page 63, Section 5.4.7 [Visibility of objects], page 700, [Hiding staves], page 229.

Snippets: Section “Editorial annotations” in Snippets.

 Internals Reference: Section “Note_spacing_engraver” in Internals Reference, Section “NoteSpacing” in Internals Reference.

Coloring objects

Individual objects may be assigned colors. Valid color names are listed in the Section A.7 [List of colors], page 730.

\override NoteHead.color = #red
c''4
c''
\override NoteHead.color = #(x11-color 'SlateGrey)
d''
\override Stem.color = "deepskyblue"
e''

\new Staff \with {
instrumentName = \markup {
  \with-color #(x11-color 'SlateGrey) "Clarinet"
}
LilyPond also supports a set of eight color names (https://jfly.uni-koeln.de/color) that is unambiguous to both color-blind and non-color-blind people. Use universal-color to access them.

```
\markup \with-color #(universal-color 'vermillion) vermillion
```

**vermillion**

Exact RGB colors can be specified using the Scheme function rgb-color. This function takes three arguments used respectively for the red, green and blue channels, and an optional alpha number for semi-transparency. (All values must be numbers from 0 to 1.) Again, transparency is only supported in SVG output; for example, in the following fragment the staff’s clef can be seen through when rendered in SVG.

```
\new Staff \with {
  instrumentName = \markup {
    \with-color #(x11-color 'red) "Clarinet"
  }
  \override Clef.color = #(rgb-color 0 0 0 0.5)
}
\relative c' { \override Staff.StaffSymbol.color = #(x11-color 'SlateBlue2)
  gis8 a
  \override Beam.color = #(x11-color "medium turquoise")
  gis a
  \override Accidental.color = #(x11-color 'orange)
  gis a
  \override NoteHead.color = #(x11-color "LimeGreen")
  gis a
  % this is deliberate nonsense; note that the stems remain black
  \override Stem.color = #(x11-color 'Boggle)
  b2 cis
}
```
See also

Notation Reference: Section A.7 [List of colors], page 730, Section 5.3.4 [The \tweak command], page 681.

Snippets: Section “Editorial annotations” in Snippets.

Known issues and warnings

An X11 color is not necessarily exactly the same shade as a similarly named normal color.

Not all X11 colors are distinguishable in a web browser, i.e., a web browser might not display a difference between LimeGreen and ForestGreen. For web use CSS colors are recommended, as detailed in Section A.7 [List of colors], page 730.

Notes in a chord cannot be separately colored with \override; use \tweak or the equivalent \single\override before the respective note instead, see Section 5.3.4 [The \tweak command], page 681.

Staff highlights

For analytical or pedagogical purposes, it may be useful to “highlight” musical passages, for example in order to show local tonality. This can be done using the \staffHighlight command, which expects a color. For all ways to enter colors, see [Coloring objects], page 258. The highlight is terminated using \stopStaffHighlight.

```
\relative { 
  \time 2/4 
  c'4 4 
  \staffHighlight "lightsteelblue"
  g'8( fis g4) -. 
  \stopStaffHighlight 
  c2 
}
```

If there are consecutive highlights, it is not necessary to write \stopStaffHighlight, as \staffHighlight also implicitly terminates the current highlight, if any. Similarly, it is not necessary to add \stopStaffHighlight at the end of the piece. This is particularly handy if every measure is to be highlighted.

```
\relative { 
  \time 2/4 
  \staffHighlight "lightpink"
  c'4 4 
  \staffHighlight "lightsteelblue"
  g'8( fis g4) -. 
  \staffHighlight "lightpink"
  c2 
}
```

By default, staves are highlighted separately.

```
music = {
```
However, several staves can be highlighted together by moving Staff_highlight_engraver to a higher context than Staff (or RhythmicStaff, or similar). This is done using the \consists and \remove commands; See Section 5.1.4 [Modifying context plug-ins], page 663, for more information. For example, if the engraver is moved to Score, the highlights are shared by all staves.

```
\layout {
  \context {  
    \Staff 
    \remove Staff_highlight_engraver
  }
  \context {  
    \Score
    \consists Staff.Highlight_engraver
  }
}

music = {  
  \time 2/4
  \staffHighlight "lightpink"
  c'4 4
  \staffHighlight "lightsteelblue"
  g'8( fis g4)-.
  \staffHighlight "lightpink"
  c2
}
```

<<
\new Staff \music
\new Staff \music
>>
The StaffHighlight\_shorten-pair property may be used to tweak the horizontal start and end of the highlight span.

\begin{verbatim}
\{ 
c'1
\once \override Staff.StaffHighlight.shorten-pair = #'(1.0 . 1.0) 
\staffHighlight lightsteelblue
  c'1
\}
\end{verbatim}
Chapter 1: Musical notation

Predefined commands
\staffHighlight, \stopStaffHighlight.

See also
Notation Reference: [Coloring objects], page 258, Section 5.1.4 [Modifying context plug-ins], page 663.
Internals Reference: Section “StaffHighlight” in Internals Reference, Section “staff-highlight-interface” in Internals Reference, Section “Staff_highlight_engraver” in Internals Reference, Section “StaffHighlightEvent” in Internals Reference, Section “staff-highlight-event” in Internals Reference.

Known issues and warnings
The behavior of highlights may not be what is expected at start repeat bar lines. The shorten-pair property demonstrated above can be used to work around this issue.

\relative {
  \staffHighlight "lightsteelblue"
  c'1
  \stopStaffHighlight
  \repeat volta 2 { c'1 }
  c'1
}

Parentheses
Objects may be parenthesized by prefixing \parenthesize to the music event. When prefixed to a chord, it parenthesizes every note. Individual notes inside a chord may also be parenthesized.

\relative {
  c''2 \parenthesize d
  c2 \parenthesize <c e g>
  c2 <c \parenthesize e g>
}

Non-note objects may be parenthesized as well. For articulations, a hyphen is needed before the \parenthesize command.

\relative {
  c''2- \parenthesize -. d
  c2 \parenthesize r
}
When \parenthesize applies to a chord, all of its notes are enclosed in the parentheses.

\relative c' {
  \parenthesize <e f>
}

\new Voice \relative c {
  \tweak Parentheses.font-size 0 \parenthesize <ces des> 
  \parenthesize ees'
  \tweak Parentheses.font-size -2 \parenthesize <c' e>
}

A second form of the \parenthesize command involves a grob path: either \parenthesize ContextName.GrobName or just \parenthesize GrobName (the latter implying the bottommost context, typically Voice). This should be added before the musical moment, like a \once \override. This form makes it possible to parenthesize grobs that are only caused indirectly by events.

\new Staff \relative <<
  \parenthesize NoteHead c'1
\new CueVoice {
  s2
  \voiceOne
  \once \override Staff.Parentheses.font-size = 3
  \parenthesize Staff.CueClef
  \cueClef treble
  e'8 f a g
}

See also

Snippets: Section “Editorial annotations” in Snippets.

Internals Reference: Section “Parenthesis_engraver” in Internals Reference, Section “Parentheses” in Internals Reference, Section “parentheses-interface” in Internals Reference.
Known issues and warnings
Currently, the font-size property of the Parentheses grob has to be adjusted manually to obtain correctly sized parentheses on chords and some other objects.

Stems
Whenever a note is found, a Stem object is created automatically. For whole notes and rests, they are also created but made invisible.

Stems may be manually placed to point up or down; see Section 5.4.1 [Direction and placement], page 690.

Predefined commands
\stemUp, \stemDown, \stemNeutral.

Selected Snippets

**Default direction of stems on the center line of the staff**
The default direction of stems on the center line of the staff is set by the Stem property neutral-direction.

```
\relative c' { 
  a4 b c b 
  \override Stem.neutral-direction = #up 
  a4 b c b 
  \override Stem.neutral-direction = #down 
  a4 b c b 
}
```

![Default direction of stems on the center line of the staff](noteheads.s2/noteheads.s2/noteheads.s2/noteheads.s2/noteheads.s2)

**Automatically changing the stem direction of the middle note based on the melody**
LilyPond can alter the stem direction of the middle note on a staff so that it follows the melody, by adding the Melody_engraver to the Voice context.

The context property suspendMelodyDecisions may be used to turn off this behavior locally.

```
\relative c' { 
  \time 3/4 
  a8 b g f b g | 
  \set suspendMelodyDecisions = ##t 
  a b g f b g | 
  \unset suspendMelodyDecisions 
  c b d c b c | 
}
```

![Automatically changing the stem direction of the middle note based on the melody](timesig.C44/clefs.G/noteheads.s2/noteheads.s2/noteheads.s2/noteheads.s2)

```
See also
Notation Reference: Section 5.4.1 [Direction and placement], page 690.

1.7.2 Outside the staff
This section discusses how to add emphasis to elements in the staff from outside of the staff.

Note names
Note names can be printed as text, by using the NoteNames context. When used simultaneously with a regular staff, that makes it possible to synchronize each note with its name, printed above or below the Staff.

\language "italiano"
melody = \relative do' { fad2 si,8 dod re mi fad4. re8 fad2 }

\new NoteNames { \melody }
\new Staff { \key si \minor \melody }
\new NoteNames {
  \set printNotesLanguage = "deutsch"
  \set printAccidentalNames = ##f
  \melody
}
\off捷
\new NoteNames { \melody }
\new Staff { \key si \minor \melody }
\new NoteNames {
  \set printNotesLanguage = "deutsch"
  \set printOctaveNames = #t
  \melody
}
\off捷

By default, note names are printed in the same language used for music entry; however, the printNotesLanguage property allows to select any other language available (see [Note names in other languages], page 8). Whether accidentals should be printed or not is determined through the printAccidentalNames property.

By setting both that property to a symbol and printOctaveNames to #t, note names can be obtained that closely resemble LilyPond entry syntax. If a more generalistic result is desired, ‘scientific’ octave names may also be obtained.

melody = \relative c' { fis2 b,8 cis d e fis4. d8 fis2 }
The noteNameSeparator property defines how chords will be printed. Other formatting functions may be defined as noteNameFunction; such a function must expect a pitch and a context argument, even if one of these can then be ignored.

\begin{verbatim}
\new NoteNames {
  \set noteNameSeparator = "+"
  \somechords
}
\new Staff { \key b \minor \somechords }
\new NoteNames {
  \set noteNameFunction =
    #(lambda (pitch cxt)
      (alteration->text-accidental-markup
       (ly:pitch-alteration pitch)))
  \somechords
}
\end{verbatim}

See also

Notation Reference: [Note names in other languages], page 8.

Internals Reference: Section “NoteName” in Internals Reference, Section “NoteNames” in Internals Reference, Section “Note_name_engraver” in Internals Reference.
**Balloon help**

Elements of notation can be marked and named with the help of a square balloon. The primary purpose of this feature is to explain notation.

```
\new Voice \with { \consists Balloon_engraver }
\relative c' { 
   \balloonGrobText #'Stem #'(3 . 4) \markup { "I'm a Stem" } a8
   \balloonGrobText #'Rest #'(-4 . -4) \markup { "I'm a rest" } r
   \balloonLengthOn
   <c, g'-%balloonText #'(-2 . -2) \markup { "I'm a note head" } c>2.
}
```

There are two music functions, \balloonGrobText and \balloonText; the former is used like \once \override to attach text to any grob, and the latter is used like \tweak, typically within chords, to attach text to an individual note.

Balloon text does not influence note spacing, but this can be altered:

```
\new Voice \with { \consists Balloon_engraver }
\relative c' { 
   \balloonGrobText #'Stem #'(3 . 4) \markup { "I'm a Stem" } a8
   \balloonGrobText #'Rest #'(-4 . -4) \markup { "I'm a rest" } r
   \balloonLengthOn
   <c, g'-%balloonText #'(-2 . -2) \markup { "I'm a note head" } c>2.
}
```

The default behavior for the attachment point of the line on the frame and the alignment of the balloon text is demonstrated below.

```
\new Voice \with { 
```

The default calculation of the attachment point can be overruled using the X-attachment and Y-attachment properties, which take values between -1 and 1, with the limits corresponding to the left (resp. bottom) and right (resp. top) of the frame. Alignment of the text is controlled by text-alignment-X and text-alignment-Y, which have a similar form.
\consists Balloon_engraver

\balloonGrobText \texttt{Rest #'(1 . 3.5) "rest" r4}

\lref{Balloon_engraver}

Grid lines

Vertical lines can be drawn between staves synchronized with the notes.

The \lref{Grid_point_engraver} must be used to create the end points of the lines, while the \lref{Grid_line_span_engraver} must be used to actually draw the lines. By default this centers grid lines horizontally below and to the left side of each note head. Grid lines extend from the middle lines of each staff. The gridInterval must specify the duration between the grid lines.

\lref{Grid_point_engraver, Grid_line_span_engraver}
Selected Snippets

**Grid lines: changing their appearance**

The appearance of grid lines can be changed by overriding some of their properties.

\score {
\new ChoirStaff <<
\new Staff {
\relative c' {
\stemUp
\c'4. d8 e8 f g4
}
}
\new Staff {
\relative c {
% this moves them up one staff space from the default position
\override Score.GridLine.extra-offset = #'(0.0 . 1.0)
\stemDown
\clef bass
\once \override Score.GridLine.thickness = #5.0
c4
\once \override Score.GridLine.thickness = #1.0
g'4
\once \override Score.GridLine.thickness = #3.0
f4
\once \override Score.GridLine.thickness = #5.0
e4
}
}

\layout {
\context {
\Staff
% set up grids
\consists "Grid_point_engraver"
% set the grid interval to one quarter note
gridInterval = #(ly:make-moment 1/4)
}
\context {
\Score
\consists "Grid_line_span_engraver"
% this moves them to the right half a staff space
}
\override NoteColumn.X-offset = #-0.5
}
}

Snippets: Section “Editorial annotations” in Snippets.

Analysis brackets
Brackets are used in musical analysis to indicate structure in musical pieces. Simple horizontal brackets are supported.
\layout {
  \context {
    \Voice
      \consists Horizontal_bracket_engraver
    }
  }
\relative {
  c''2\startGroup
d\stopGroup
c''2\startGroup
d\stopGroup
}

Analysis brackets may be nested.
\layout {
  \context {
    \Voice
      \consists Horizontal_bracket_engraver
    }
  }
\relative {
  c''4\startGroup\startGroup
d4\stopGroup
e4\startGroup
d4\stopGroup\stopGroup
Selected Snippets

**Analysis brackets above the staff**

Simple horizontal analysis brackets are added below the staff by default. The following example shows a way to place them above the staff instead.

```latex
\layout {
  \context {
    Voice
    \consists "Horizontal_bracket_engraver"
  }
}

\relative c' {
  \once \override HorizontalBracket.direction = #UP
c2\startGroup
d2\stopGroup
}
```

**Analysis brackets with labels**

Text markup may be added to analysis brackets through the `text` property of the HorizontalBracketText grob. Adding different texts to brackets beginning at the same time requires the \tweak command.

Bracket text will be parenthesized after a line break.

```latex
\paper { tagline = ##f }

\layout {
  \context {
    Voice
    \consists "Horizontal_bracket_engraver"
    \override HorizontalBracket.direction = #UP
  }
}

\once \override HorizontalBracketText.text = "a"
c'\startGroup d'\stopGroup
\once \override HorizontalBracketText.text = "a"
e'\startGroup d'\stopGroup |
c'\-\tweak HorizontalBracketText.text
  \markup \bold \huge "b" \startGroup
  \-\tweak HorizontalBracketText.text "a" \startGroup
```
Measure spanners are an alternate way to print annotated brackets. As opposed to horizontal brackets, they extend between two bar lines rather than two notes. The text is displayed in the center of the bracket.

\paper { tagline = ##f }

\layout {
  \context {
    \Staff
      \consists Measure_spanner_ engraver
  }
}

<<
\new Staff \relative c' {  
  \key d \minor

1.8 Text

Moderato cantabile molto espressivo

This section explains how to include text (with various formatting) in music scores.

1.8.1 Writing text

This section introduces different ways of adding text to a score.

Note: To write accented and special text (such as characters from other languages), simply insert the characters directly into the LilyPond file. The file must be saved as UTF-8. For more information, see [Text encoding], page 576.

Text objects overview

Simple text objects are entered as strings between double quotes (these are optional for a single word). The markup mode is a richer tool that can accept a variety of advanced text formatting and graphical enhancements, as detailed in Section 1.8.2 [Formatting text], page 287.

As such, markup blocks may be used:
- in any TextScript object (attached to notes with - or _); see [Text scripts], page 277;
- as ‘spanners’, when some indications are prolonged over several beats or bars; see [Text spanners], page 279;
- in any mark printed above the score, such as RehearsalMark or MetronomeMark objects respectively introduced with the \mark or \tempo keywords; see [Text marks], page 281;
• as stand-alone text blocks, entered at the top level outside of any \score block (in this specific case the \markup or \markuplist command is mandatory, and cannot be omitted in favor of a simple text string between double quotes); see [Separate text], page 286;
• in any definition inside the \header block (e.g., title, subtitle, composer), or in specific elements defined inside the \paper block such as evenHeaderMarkup for page numbers. This is explained in Section 3.3 [Titles and headers], page 538.

Many other text-based objects may be entered as markup blocks, even if that is not their primary use.

• Fingerings may easily be replaced with markup blocks, if introduced with the \finger command; see [Fingering instructions], page 252.
• Lyric syllables may be formatted through the \markup command; see Section 2.1.1 [Common notation for vocal music], page 311.
• Chord names are in fact defined as markup blocks, and therefore may be redefined in the same way for customizing chord modifiers or chord exceptions; see Section 2.7.2 [Displaying chords], page 470.
• Dynamics are usually entered in a simple way; however it is possible to define [New dynamic marks], page 147, as markup objects. Some dynamics such as crescendo are printed as spanners and may be redefined through properties such as crescendoText; see [Dynamics], page 140.
• Less common objects are also made of markup blocks, such as [Balloon help], page 268, indications.

In fact, it is possible to use \markup to customize the appearance of virtually any graphical object (or ‘grob’), by overriding either its text property if it has one, or its stencil property. Some of the logic that makes this a possibility is explained in Section “Flexible architecture” in Essay.

The following example illustrates the ubiquity of markup blocks, not only as some of the objects listed above, but also by replacing musical objects with text objects through various methods.

\header { title = \markup "Header" }

dyn =
#(make-dynamic-script #{ \markup \text "DynamicText" #})

\markup \box "Top-level markup"

\score {
  \new ChordNames
  \with { \majorSevenSymbol = \markup "majorSevenSymbol" }
  \chordmode { c1:maj7 }
  \new Staff {\tempo \markup "MetronomeMark"
  \textMark "TextMark"
  \once \override TupletNumber.text = \markup "TupletNumber"
  \tuplet 3/2 {
      \once \override NoteHead.stencil =

Header

Top-level markup

Snippets: Section “Text” in Snippets.

Text scripts

Simple “quoted text” indications may be added to a score, as demonstrated in the following example. Such indications may be manually placed above or below the staff, using the syntax described in Section 5.4.1 [Direction and placement], page 690.

\relative { a'8"pizz." g f e a4"scherz." f }
This syntax is actually a shorthand; more complex text formatting may be added to a note by explicitly using a \markup block, as described in Section 1.8.2 [Formatting text], page 287.

\relative {
    a'8\markup { \italic pizz. } g f e
    a4 \markup { \tiny scherz. \bold molto } f }

By default, text indications do not influence the note spacing. However, their widths can be taken into account: in the following example, the first text string does not affect spacing, whereas the second one does.

\relative {
    a'8"pizz." g f e
    \textLengthOn
    a4."scherzando" f }

In addition to text scripts, articulations can be attached to notes. For more information, see [Articulations and ornamentations], page 137.

For more information about the relative ordering of text scripts and articulations, see Section “Placement of objects” in Learning Manual.

Predefined commands
\textLengthOn, \textLengthOff.

See also
Notation Reference: Section 1.8.2 [Formatting text], page 287, Section 5.4.1 [Direction and placement], page 690, [Articulations and ornamentations], page 137.
Snippets: Section “Text” in Snippets.
Internals Reference: Section “TextScript” in Internals Reference.

Known issues and warnings
Checking to make sure that text scripts and lyrics are within the margins requires additional calculations. In cases where slightly faster performance is desired, use

\override Score.PaperColumn.keep-inside-line = ##f
Text spanners

Some performance indications, e.g., rallentando or accelerando, are written as text and are extended over multiple notes with dotted lines. Such objects, called “spanners”, may be created from one note to another using the following syntax:

\relative {
  \override TextSpanner.bound-details.left.text = "rit."
  \startTextSpan c \stopTextSpan
}

\relative {
  \override TextSpanner.bound-details.left.text = \markup { \upright "rit." }
  \startTextSpan c \stopTextSpan
}

The string to be printed is set through object properties. By default it is printed in italic characters, but different formatting can be obtained using \markup blocks, as described in Section 1.8.2 [Formatting text], page 287.

The line style, as well as the text string, can be defined as an object property. This syntax is described in Section 5.4.5 [Line styles], page 698.

Predefined commands
\textSpannerUp, \textSpannerDown, \textSpannerNeutral.

Known issues and warnings

LilyPond is only able to handle one text spanner per voice.

The texts at the bounds of a text spanner may collide.

\{ \once \override TextSpanner.bound-details.left.text = "The text is" \once \override TextSpanner.bound-details.right.text = "too long" c'2\startTextSpan d'2\stopTextSpan \}

Workarounds can be found in Section 4.5 [Horizontal spacing], page 636.

Selected Snippets
Dynamics text spanner postfix

Custom text spanners can be defined and used with hairpin and text crescendos. `< and `>` produce hairpins by default, `\cresc` etc. produce text spanners by default.

```plaintext
\cresc\dim\decresc\!
```

Dynamics custom text spanner postfix

Postfix functions for custom crescendo text spanners. The spanners should start on the first note of the measure. One has to use `-%cresc`, otherwise the spanner start will rather be assigned to the next note.

```plaintext
\relative c' {
  c4\cresc d4 e4 f4 |
  g4 a4\! b4\cresc poco c4 |
  c4 d4 e4 f4 |
  g4 a4\! b4\< c4 |
  g4\dim a4 b4\decresc c4\!
}
```

Dynamics text spanner postfix

% Some sample text dynamic spanners, to be used as postfix operators

```plaintext
crpoco =
#(make-music 'CrescendoEvent
 'span-direction START
 'span-type 'text
 'span-text "cresc. poco a poco")
```

```plaintext
\relative c' {
  c4\cresc d4 e4 f4 |
  g4 a4\! b4\crpoco c4 |
  c4 d4 e4 f4 |
  g4 a4\! b4\< c4 |
  g4\dim a4 b4\decresc c4\!
}
```

Dynamics custom text spanner postfix

% Two functions for (de)crescendo spanners where you can explicitly
% give the spanner text.

```plaintext
mycresc =
#(define-music-function (mymarkup) (markup?)
 (make-music 'CrescendoEvent
 'span-direction START
 'span-type 'text
 'span-text mymarkup))
```

```plaintext
mydecresc =
#(define-music-function (mymarkup) (markup?)
 (make-music 'DecrescendoEvent
 'span-direction START
 'span-type 'text
 'span-text mymarkup))
```

```plaintext
\relative c' {
  c4-%mycresc "custom cresc" c4 c4 c4 |
  c4 c4 c4 c4 |
  c4-%mydecresc "custom decresc" c4 c4 c4 |
  c4 c4\! c4 c4
}

Section labels
The \sectionLabel command marks the beginning of a named passage. It is well suited for use at a section division created with \section, but it does not imply \section and may be used alone.

\fixed c' {
    \sectionLabel "Verse"
    c2 g
    \section
    \sectionLabel "Chorus"
    g2 c
    \bar "| ."
}

See also
Notation Reference: Section 1.8.2 [Formatting text], page 287, [Rehearsal marks], page 124, [Section divisions], page 128.
   Snippets: Section “Text” in Snippets.
   Internals Reference: Section “SectionLabel” in Internals Reference, Section “SectionLabel-Event” in Internals Reference.

Text marks
Text marks are textual objects that, unlike text scripts (see [Text scripts], page 277), are not printed over notes but between notes, often aligned to a bar line.

Note: Older LilyPond versions used the \mark command for text marks, even though it is primarily intended for rehearsal marks (see [Rehearsal marks], page 124). The \textMark and \textEndMark commands are better suited for text marks with regard to their default settings as well as the ability to have several text marks at the same moment. It is therefore recommended to use \textMark and \textEndMark instead of \mark "Text" or \mark \markup .... Note that if converting code that uses \mark for text marks, overrides using RehearsalMark should be changed to TextMark.
Before using text marks, it is recommended to seek a more specific command, if available. For text that identifies a section, use `\sectionLabel` (see [Section labels], page 281). For jump instructions, use `\jump` (see [Manual repeat marks], page 181). These commands have different default layout settings, and they create separate objects which can be styled differently from generic text marks in stylesheets.

A text mark is entered using either `\textMark` or `\textEndMark`. The `\textMark` command draws a left-aligned mark.

```
\fixed c'' { 
  \textMark "Fl. 1 solo"
  c4 e g2
  \textMark "A due"
  e4 g c'2
}
```

If a line break occurs at the point `\textMark` is used, the text appears on the next system.

```
\fixed c'' { 
  \textMark "Fl. 1 solo"
  c4 e g2
  \break
  \textMark "A due"
  e4 g c'2
}
```

Unlike `\textMark`, `\textEndMark` creates a right-aligned mark. If it occurs on a line break, it is printed on the preceding system.

```
\fixed c' { 
  \repeat volta 2 { 
    c4 e8 f g2 
    e4 f8 g c'2
    \textEndMark "ad lib"
  }
  \break
  c'4 8 8 4 8 8
  c'1
}
```
Complex text formatting may be added using a \markup block (see Section 1.8.2 [Formatting text], page 287).

\relative {
\textMark \markup { \italic { colla parte } } 
\markLengthOn 
\mark \default 
c'2 2 
\textEndMark "long mark text"
\markLengthOn 
\mark \default 
2 2 
\textEndMark "long mark text"
}

There can be several text marks at the same moment. Their stacking order can be overridden using the outside-staff-priority property (see Section 4.4.3 [Vertical collision avoidance],
page 635). Alternatively, a single text mark with \markup \column { ... } can achieve the same effect.

\fixed c' {
\repeat volta 2 {
  c4 g c'8 b c4 e' c' c2
\textEndMark "ad lib."
\tweak outside-staff-priority 1200
\tweak font-size -1
  \textEndMark "2nd time a due"
}
}

\ad lib. 2nd time a due

\c'8 8 8 8 8 8 8 8
\textMark \markup \column {
  \line { Left-aligned mark }
  \line { (default for \concat { \typewriter "\textMark" } } }
}\d'8 8 8 8 8 8 8 8

\c'8 8 8 8 8 8 8 8
\tweak self-alignment-X #CENTER
\textMark "Centered mark"
\d'8 8 8 8 8 8 8 8

\c'8 8 8 8 8 8 8 8
\tweak self-alignment-X #RIGHT
\textMark \markup \right-column {
  \line { Right-aligned mark }
  \line { (default for \concat { \typewriter "\textEndMark" } } }
}\d'8 8 8 8 8 8 8 8

\textMark\markup \column {
  \line { Left-aligned mark }
  (default for \textMark)
}\textMark
\textMark

\textMark\markup \right-column {
  \line { Centered mark }
  (default for \textEndMark)
}\textMark\textMark
Right-aligned mark
(default for\textEndMark)

Predefined commands
\textMark, \textEndMark, \markLengthOn, \markLengthOff.

Selected Snippets

\textbf{Printing marks on every staff}
Although marks are normally only printed above the topmost staff, they may also be printed on every staff.

\begin{verbatim}
\score {
  \new Staff { \mark \default c''1 \textMark "molto" c'' } 
  \new Staff { \mark \default c'1 \textMark "molto" c' } 
  >> 
  \layout {
    \context { 
      \Score  
      \remove Mark_engraver 
      \remove Text_mark_engraver 
      \remove Staff_collecting_engraver 
    } 
    \context { 
      \Staff 
      \consists Mark_engraver 
      \consists Text_mark_engraver 
      \consists Staff_collecting_engraver 
    } 
  } 
}
\end{verbatim}

Snippets: Section “Text” in Snippets.

Separate text

A \markup or \markuplist block can exist by itself, outside of any \score block, as a “top-level expression”. This syntax is described in Section 3.2.5 [File structure], page 536.

\markup
{
  Tomorrow, and tomorrow, and tomorrow...
}

Tomorrow, and tomorrow, and tomorrow...

This allows printing text separately from the music, which is particularly useful when the input file contains several music pieces, as described in Section 3.2.2 [Multiple scores in a book], page 533.

\score
{
  c'1
}
\markup
{
  Tomorrow, and tomorrow, and tomorrow...
}
\score
{
  c'1
}

\timesig.C44/clefs.G/noteheads.s0

Tomorrow, and tomorrow, and tomorrow...

Using \markuplist, separate text blocks can be spread over multiple pages, making it possible to print text documents or books entirely within LilyPond. For a description of this feature and the specific syntax it requires, see [Text markup introduction], page 287.

Predefined commands
\markup, \markuplist.

Selected Snippets

Stand-alone two-column markup

Stand-alone text may be arranged in several columns using \markup commands:

\markup
{
  \fill-line
  \hspace #1
  \column
    \line { O sacrum convivium }
    \line { in quo Christus sumitur, }
    \line { recolitur memoria passionis ejus, }
    \line { mens impletur gratia, }
    \line { futurae gloriae nobis pignus datur. }
O sacrum convivium in quo Christus sumitur, recolitur memoria passionis ejus, mens impletur gratia, futurae gloriae nobis pignus datur. Amen.

O sacred feast in which Christ is received, the memory of His Passion is renewed, the mind is filled with grace, and a pledge of future glory is given to us. Amen.

Snippets: Section “Text” in Snippets.

Internals Reference: Section “TextScript” in Internals Reference.

1.8.2 Formatting text
This section presents basic and advanced text formatting, using the markup mode specific syntax.

Text markup introduction
A \markup or \markuplist block is used to typeset text with an extensible syntax called “markup mode”. Such blocks can be used in many contexts (see [Text objects overview], page 275).

In markup mode, words are written as-is. A single word does not need any quotes.

\markup intenso

intenso

Several words can be grouped together by enclosing them in quotes.

\markup "molto intenso"

molto intenso

Apart from grouping, quoting also allows writing special characters such as ‘\’ and ‘#’ without affecting the formatting of the text. Double quotation marks themselves may be printed by preceding them with backslashes.

\relative {
  a’1’"\italic markup..."
Formatting is achieved through markup commands. Their name is written preceded by a backslash. They expect a number of arguments specific to the command. For an exhaustive list of \markup-specific commands, see Section A.12 [Text markup commands], page 754.

\markup \italic "string. assai"
\markup \with-color "red" intenso

\markup \with-color "red" \italic intenso

Several markup expressions can be grouped together within braces to form a so-called markup list. Without further formatting, the elements of a markup list are typeset in a row.

\markup \center-column \{ molto \italic intenso \}

Des Simplicius Simplicissimus Jugend
Karl Amadeus Hartmann

Also, some commands do not return a markup but a markup list. The result can then be used where a markup list is expected. For a list of these commands, see Section A.13 [Text markup list commands], page 816.

\markup \string-lines
   "Twinkle, twinkle, little star,
    How I wonder what you are!"

Twinkle, twinkle, little star, How I wonder what you are!

\markup \center-column \string-lines
   "Twinkle, twinkle, little star,
    How I wonder what you are!"

Twinkle, twinkle, little star,
How I wonder what you are!
Elements of a nested markup list are simply treated as elements of the main markup list.

\markup {center-column { 
  \bold "Des Simplicius Simplicissimus Jugend"  
  { Karl Amadeus \smallCaps Hartmann } 
}}

**Des Simplicius Simplicissimus Jugend**
Karl Amadeus HARTMANN

To group elements of a nested markup list in a row, apply the `\line` command to the markup list. This stacks elements from the markup list horizontally into a single markup.

\markup {center-column {  
  \bold "Des Simplicius Simplicissimus Jugend"  
  \line { Karl Amadeus \smallCaps Hartmann } 
}}

**Des Simplicius Simplicissimus Jugend**
Karl Amadeus HARTMANN

A special feature is the handling of commands taking markups when applied to markup lists. When a command expects a markup as its last argument, and a markup list is given for this argument, the markup command is applied to each of the individual markups in the list.

\markup {box { Karl Amadeus \smallCaps Hartmann } }

[Karl Amadeus HARTMANN]

In this case, the result is in turn a markup list, which can be passed to a command expecting a markup list, or to one expecting a markup, with again the mapping behavior described above in the latter case.

\markup {center-column \box { Karl Amadeus \smallCaps Hartmann }  
\markup {rotate #30 \box { Karl Amadeus \smallCaps Hartmann } }

[Karl]  
Amadeus  
HARTMANN

Karl Amadeus HARTMANN

Apply \line to a markup list in order to make it treated as a single markup argument.

\markup {box { Karl Amadeus \smallCaps Hartmann }  
\markup {box \line { Karl Amadeus \smallCaps Hartmann } }

[Karl Amadeus HARTMANN]

Karl Amadeus HARTMANN

When the entire content of a \markup expression is a markup list, it is implicitly typeset using the `\line` command. Thus, elements are stacked horizontally and grouped as a single, unbreakable text block. The \markuplist command acts differently: it expects a markup list,
and prints the individual markups on the page, stacking them vertically, and allowing page breaks. The following example illustrates this difference.

\markup \box \wordwrap
{ Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. }

\markuplist \box \wordwrap-lines
{ Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. }

\markup
{ Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. }

Markups can be stored in variables, to be reused in any context where a markup is accepted. For example, such a variable can be directly attached to notes:

\markup allegro = \markup \bold \large Allegro
{
 d''8.\allegro
 d'16 d'4 r2
} 

The \etc syntax allows to define custom shorthands usable as markup commands.

\markup reddish = \markup \with-color "tomato" \etc

\markup { molto \reddish intenso }

molto intenso

The inner workings of markup commands and how to implement more complex ones is explained in Section “Markup functions” in Extending.

Known issues and warnings
Syntax error messages for markup mode can be confusing.

Selecting font and font size
Basic font switching is supported in markup mode:

```
\relative { 
  d''1\markup { 
    \bold { Più mosso } 
    \italic { non troppo \underline Vivo } 
  } 
  r2 r4 r8 
  d,\markup { \italic quasi \smallCaps Tromba } 
  f1 d2 r 
}
```

```
\relative { 
  b'1\markup { \huge Sinfonia } 
  b'\markup { \teeny da } 
  b1\markup { \normalsize camera } 
}
```

The font size can be altered, relative to the global staff size, in a number of different ways.

It can be set to predefined size.

```
\relative b' { 
  b1\markup { \larger Sinfonia } 
  b1\markup { \smaller da } 
  b1\markup { \magnify #0.6 camera } 
}
```

It can be set relative to its previous value.

```
\relative b' { 
  b1\markup { \larger Sinfonia } 
  b1\markup { \smaller da } 
  b1\markup { \magnify #0.6 camera } 
}
```
It can be increased or decreased relative to the value set by the global staff size.

\relative b' {
  b1\markup { \fontsize #-2 Sinfonia }
  b1\markup { \fontsize #1 da }
  b1\markup { \fontsize #3 camera }
}

\relative b' {
  b1\markup { \abs-fontsize #20 Sinfonia }
  b1\markup { \abs-fontsize #8 da }
  b1\markup { \abs-fontsize #14 camera }
}

If the text includes spaces, then it is best to put it all inside quote marks, so that the size of each space is appropriate for the size of the other characters.

\markup \fontsize #6 \bold { Sinfonia da camera }
\markup \fontsize #6 \bold { "Sinfonia da camera" }

Sinfonia da camera

Text may be printed as subscript or superscript. By default these are printed in a smaller size, but a normal size can be used as well:

\markup {
  \column {
    \line { 1 \super st movement }
    \line { 1 \normal-size-super st movement
    \sub { (part two) } }
  }
}

1\textsuperscript{st} movement
1\textsuperscript{st} movement (part two)

The markup mode provides an easy way to select alternate font families. The default serif font, of roman type, is automatically selected unless specified otherwise; on the last line of the following example, there is no difference between the first and the second word.

\markup {
  \column {
    \line { Act \number 1 }
    \line { \sans { Scene I. } }
  }
}
Act 1
Scene 1.
Verona. An open place.
Enter Valentine and Proteus.

Some of these font families, used for specific items such as numbers or dynamics, do not provide all characters, as mentioned in [New dynamic marks], page 147, and [Manual repeat marks], page 181.

When used inside a word, some font-switching or formatting commands may produce an unwanted blank space. This can easily be solved by concatenating the text elements together:

\markup {
\column {
  \line {
    \concat { 1 \super st } 
    movement
  }
  \line {
    \concat { \dynamic p , }
    \italic { con dolce espres
tione } 
  }
}
}

1\textsuperscript{st} movement
\textit{p, con dolce espressione}

An exhaustive list of font switching commands and custom font usage commands can be found in Section A.12.1 [Font markup], page 755.

Defining custom font sets is also possible, as explained in Section 1.8.3 [Fonts], page 303.

**Predefined commands**
\texttt{\teeny, \tiny, \small, \normalsize, \large, \huge, \smaller, \larger}.

**See also**
Notation Reference: Section A.12.1 [Font markup], page 755, [New dynamic marks], page 147, [Manual repeat marks], page 181, Section 1.8.3 [Fonts], page 303.

- Installed Files: scm/define-markup-commands.scm.
- Snippets: Section “Text” in Snippets.
- Internals Reference: Section “TextScript” in Internals Reference.

**Known issues and warnings**
Using the font sizing commands \texttt{\teeny, \tiny, \small, \normalsize, \large, and \huge} will lead to inconsistent line spacing compared to using \texttt{\fontsize}.
Text alignment

This subsection discusses how to place text in markup mode. Markup objects can also be moved as a whole, using the syntax described in Section “Moving objects” in Learning Manual.

Markup objects may be aligned in different ways. By default, a text indication is aligned on its left edge: in the following example, there is no difference between the first and the second markup. That example also demonstrates various syntactically correct ways of placing the alignment commands:

\relative {
  d''1\markup { poco }
  f
  d\markup { \left-align poco }
  f
  d\markup { \center-align poco }
  f
  d\markup \right-align { poco }
}

Horizontal alignment may be fine-tuned using a numeric value:

\relative {
  a'1\markup { \halign #-1 poco }
  e'
  a,\markup { \halign #0 poco }
  e'
  a,\markup { \halign #0.5 poco }
  e'
  a,\markup { \halign #2 poco }
}

Lastly, words and any other objects may be moved by preceding them with padding. Negative padding is also supported, and will move any objects that follow in the opposite direction. Although padding is normally invisible, in the following example some commands have been added to make it appear more clearly:

\relative {
  d''1\markup { poco }
  f
  d\markup { \with-color #darkred \box \hspace #4 poco }
  f
  d\markup { \with-color #darkred \box \hspace #-4 poco }
  f
  d\markup { \with-color #darkred \box \hspace #10 poco }
}
Some objects may have alignment procedures of their own, and therefore are not affected by these commands. It is possible to move such markup objects as a whole, as shown for instance in [Text marks], page 281.

Vertical alignment can be set in a similar way. As stated above, markup objects can be moved as a whole; however, it is also possible to move specific elements inside a markup block.

```latex
\relative {
  d'2 \markup {
    Acte I
    \raise #2 \{ Scène 1 \}
  }
  a'
  g_ \markup {
    \lower #4 \bold \{ Très modéré \}
  }
  a
  d, \markup \raise #4 \italic \{ Une forêt. \}
  a'4 a g2 a
}
```

Some commands can affect both the horizontal and vertical alignment of text objects in markup mode:

```latex
\relative {
  d'2 \markup {
    Acte I
    \translate #'(-1 . 2) \"Scène 1\"
  }
  a'
  g_ \markup {
    \general-align \#Y \#3.2 \bold \"Très modéré\"
  }
  a
  d, \markup \translate-scaled #'(-1 . 2) \teeny \{ \"Une forêt.\"
  }
  a'4 a g2 a
}
```

Some objects may have alignment procedures of their own, and therefore are not affected by these commands. It is possible to move such markup objects as a whole, as shown for instance in [Text marks], page 281.
Here again, padding (either positive or negative) is a convenient way of positioning objects vertically, when inserted into markup columns:

\relative
  {d'2\markup {Acte I \column {\with-color #darkred \box \vspace #-1 "Scène 1"}}}
a'
g\markup \column {\with-color #darkred \box \vspace #1 "Très modéré"}
\hspace #10 \center-column {a "b c" \line {d e f}}
\hspace #10 \center-column {a "b c" \line {d e f}}

A markup object may include several lines of text. In the following example, each element or expression is placed on its own line, either left-aligned or centered:

\markup {
  \column {
    a "b c"
    \line {d e f}
  }
  \hspace #10
  \center-column {
    a "b c"
    \line {d e f}
  }
}
Similarly, a list of elements or expressions may be spread to fill the entire horizontal line width (if there is only one element, it will be centered on the page). These expressions can, in turn, include multi-line text or any other markup expression:

\markup {\fill-line {\line {William S. Gilbert}\center-column {\huge \smallCaps "The Mikado" or \smallCaps "The Town of Titipu"}\line {Sir Arthur Sullivan}}}\fill-line {1885}}

William S. Gilbert \textbf{THE MIKADO} Sir Arthur Sullivan
or \textbf{THE TOWN OF TITIPU} 1885

Elements may be spread to fill any specified width by overriding the line-width property. By default it is set to #f which indicates the entire line:

\markup {\column {\fill-line {left center right}null\override #'(line-width . 30)\fill-line {left center right}}}

left center right

Long text indications can also be automatically wrapped accordingly to the given line width. These will be either left-aligned or justified, as shown in the following example.

\markup {\column {\line \smallCaps {La vida breve}\line \bold {Acto I}\wordwrap italic {La escena representa el corral de una casa de gitanos en el Albaicín de Granada. Al fondo una puerta por la que se ve el negro interior de}}
una Fragua, iluminado por los rojos resplandores
del fuego.)
}
\hspace #0
\line \bold { Acto II }
\override #'(line-width . 50)
\justify \italic {
(Calle de Granada. Fachada de la casa de Carmela
y su hermano Manuel con grandes ventanas abiertas
a través de las que se ve el patio
donde se celebra una alegre fiesta)
}
\}
\}

LA VIDA BREVE

Acto I

(La escena representa el corral de una casa de gitanos en el Albaicín de
Granada. Al fondo una puerta por la que se ve el negro interior de una
Fragua, iluminado por los rojos resplandores del fuego.)

Acto II

(Calle de Granada. Fachada de la casa de Carmela
y su hermano Manuel con grandes ventanas
abiertas a través de las que se ve el patio donde se
celebra una alegre fiesta)

An exhaustive list of text alignment commands can be found in Section A.12.2 [Markup for
text alignment], page 766.

page 281.

Installed Files: scm/define-markup-commands.scm.

Snippets: Section “Text” in Snippets.

Internals Reference: Section “TextScript” in Internals Reference.

Graphic notation inside markup

Various graphic objects may be added to a score, using markup commands.

Some markup commands allow decoration of text elements with graphics, as demonstrated
in the following example.

\markup \fill-line {
  \center-column {
    \circle Jack
    \box "in the box"
    \null
    \line {
      Erik Satie
    }
  }
}
Some commands may require an increase in the padding around the text; this is achieved with some markup commands exhaustively described in Section A.12.2 [Markup for text alignment], page 766.

Other graphic elements or symbols may be printed without requiring any text. As with any markup expression, such objects can be combined.
Advanced graphic features include the ability to include external image files converted to the Encapsulated PostScript format (eps), or to directly embed graphics into the input file, using native PostScript code. In such a case, it may be useful to explicitly specify the size of the drawing, as demonstrated below:

```latex
\markup {
  \combine
  \draw-circle #4 #0.4 ##f
  \filled-box #'(-4 . 4) #'(-0.5 . 0.5) #1
  \hspace #5

  \center-column {
    \triangle ##t
    \combine
      \draw-line #'(0 . 4)
      \arrow-head #Y #DOWN ##f
  }
}
```

```
\begin{verbatim}
c'1\markup {
  \combine
  \epsfile #X #10 "/context-example.eps"
  \with-dimensions #'(0 . 6) #'(0 . 10)
  \postscript "
    -2 3 translate
    2.7 2 scale
    newpath
    2 -1 moveto
    4 -2 4 1 1 arct
    4 2 3 3 1 arct
    0 4 0 3 1 arct
    0 0 1 -1 1 arct
    closepath
    stroke"
}
c'
\end{verbatim}
```

An exhaustive list of graphics-specific commands can be found in Section A.12.3 [Graphical markup], page 782.
See also
Notation Reference: Section A.12.2 [Markup for text alignment], page 766, Section 5.4.3 [Dimensions], page 692, Section 1.7 [Editorial annotations], page 248, Section A.12.3 [Graphical markup], page 782.

Installed Files: scm/define-markup-commands.scm, scm/stencil.scm.
Snippets: Section “Text” in Snippets.
Internals Reference: Section “TextScript” in Internals Reference.

Music notation inside markup
Various musical notation elements may be added to a score, inside a markup object.

Notes and accidentals can be entered using markup commands:

\markup {  
  \note {4} #1  
  =  
  \note-by-number #1 #1 #1.5  
}
\markup {  
  \natural \semiflat \flat \sesquiflat \doubleflat  
}
\glissando
\markup {  
  \natural \semisharp \sharp \sesquisharp \doublesharp  
}
\glissando
\g
\relative {  
  g\ bes ees \finger \markup \tied-lyric "4-1"  
  fis_\markup \{ \dynamic rf \}  
  bes_\markup {  
    \beam #8 #0.1 #0.5  
  }  
  cis  
  d_\markup {  
    \markalphabet #8  
    \markletter #8  
  }  
}

Other notation objects may also be printed in markup mode:
More generally, any available musical symbol may be included separately in a markup object, as demonstrated below; an exhaustive list of these symbols and their names can be found in Section A.8 [The Emmentaler font], page 735.

\relative {
  c''2
  c' \markup { \musicglyph "eight" }
  c,4
  c,8 \markup { \musicglyph "clefs.G_change" }
  c16
  c2 \markup { \musicglyph "timesig.neomensural94" }
}

Another way of printing non-text glyphs is described in [Music fonts], page 310. This is useful for printing braces of various sizes.

The markup mode also supports diagrams for specific instruments:

\relative {
  c'1 \markup {
    \fret-diagram-terse "x;x;o;2;3;2;"
  }
  c \markup {
    \harp-pedal "^-v|--ov^-"
  }
  c
  c \markup {
    \combine
    \musicglyph "accordion.discant"
    \combine
    \raise #0.5 \musicglyph "accordion.dot"
  }
  \raise #1.5 \musicglyph "accordion.dot"
}

Such diagrams are documented in Section A.12.6 [Instrument-specific markup], page 799.
A whole score can even be nested inside a markup object:

\relative {  
c'4 d\markup {  
\score {  
 \relative { c'4 d e f }  
}  
}  
e f |  
c d e f  
}

An exhaustive list of music notation related commands can be found in Section A.12.4 [Markup for music and musical symbols], page 791.

See also

Notation Reference: Section A.12.4 [Markup for music and musical symbols], page 791, Section A.8 [The Emmentaler font], page 735, [Music fonts], page 310.

Installed Files: scm/define-markup-commands.scm, scm/fret-diagrams.scm, scm/harp-pedals.scm.

Snippets: Section “Text” in Snippets.

Internals Reference: Section “TextScript” in Internals Reference.

Known issues and warnings

Vertical spacing of a \score inside a markup object is controlled by baseline-skip. Any \paper settings are ignored.

1.8.3 Fonts

Fonts in LilyPond are handled by several libraries; two of them are of relevance to the user: FontConfig (https://fontconfig.org) is used to detect available fonts, and selected fonts are then rendered by Pango (https://pango.org) to display text strings.

This section shows how to access fonts in LilyPond, and how to change them in scores.

Finding fonts

In addition to any font already installed on the operating system, more fonts may be added to the ones detected by FontConfig (and thus available in LilyPond scores) by the following commands:

#(ly:font-config-add-font "path/to/font-file")

#(ly:font-config-add-directory "path/to/directory/")

Both commands accept either absolute or relative paths, which makes it possible to compile a score on any system by simply distributing the relevant font files together with the LilyPond input files.

To verify that the desired fonts are found by FontConfig, use the command

#(ly:font-config-display-fonts), which prints the complete list of available fonts to the
console log. It also shows the actual font names to be used with LilyPond; these may differ from the file names themselves.

See [Single entry fonts], page 306, and [Entire document fonts], page 308, how to access fonts in general.

**Font families**

Three generic aliases for text font families\(^1\) are available: ‘roman’ (serif), ‘sans’, and ‘typewriter’. Depending on the backend, these families get mapped to different font family aliases.

For the `svg` backend:

<table>
<thead>
<tr>
<th><strong>generic family</strong></th>
<th><strong>SVG font family</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>roman</td>
<td>serif</td>
</tr>
<tr>
<td>sans</td>
<td>sans-serif</td>
</tr>
<tr>
<td>typewriter</td>
<td>monospace</td>
</tr>
</tbody>
</table>

‘serif’, ‘sans-serif’, and ‘monospace’ are ‘generic-family’ in SVG and CSS specifications.

For other backends:

<table>
<thead>
<tr>
<th><strong>generic family</strong></th>
<th><strong>default font family alias</strong></th>
<th><strong>font families contained in alias</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>roman</td>
<td>LilyPond Serif</td>
<td>C059, Century SchoolBook URW, Century Schoolbook L, TeX Gyre Schola, DejaVu Serif, . . . , serif</td>
</tr>
<tr>
<td>sans</td>
<td>LilyPond Sans Serif</td>
<td>Nimbus Sans, Nimbus Sans L, TeX Gyre Heros, DejaVu Sans, . . . , sans-serif</td>
</tr>
<tr>
<td>typewriter</td>
<td>LilyPond Monospace</td>
<td>Nimbus Mono PS, Nimbus Mono, Nimbus Mono L, TeX Gyre Cursor, DejaVu Sans Mono, . . . , monospace</td>
</tr>
</tbody>
</table>

If a character does not exist in the appropriate font of the first listed family, the appropriate font of the next listed family gets used instead for that character.

Note that the URW font families distributed with LilyPond (‘C059’, ‘Nimbus Sans’, and ‘Nimbus Mono PS’) have a peculiarity: By default, in addition to the standard ligatures like ‘fi’ or ‘ffi’, they substitute the string ‘Nr.’ with the Numero Sign (U+2116) if the ‘latn’ script is selected. To circumvent this locally, insert a zero-width non-joiner character (ZWNJ, U+200C) between the ‘N’ and ‘r’ characters. To circumvent this globally, use the following code to make LilyPond always insert a ZWNJ character.

```verbatim
\paper {
    #(add-text-replacements!
        `(("Nr." . ,(format #f "N~ar." (ly:wide-char->utf-8 #x200C)))))
    }
```

‘LilyPond Serif’, ‘LilyPond Sans Serif’, and ‘LilyPond Monospace’ are font family aliases defined in the additional FontConfig configuration file `00-lilypond-fonts.conf`, which can be usually found in directory `/usr/local/share/lilypond/2.25.0/fonts`, and which is used exclusively by LilyPond.

Each font family may include different shapes and series. The following example demonstrates that, including code to also change the size. The value supplied to font-size is taken relative to the default font size.

```verbatim
\override Score.TextMark.font-family = #'typewriter
\textMark "Ouverture"
\override Voice.TextScript.font-shape = #'italic
```

\(^1\) In its simplest form, a *font family* usually contains fonts in roman, italic, bold, and bold italic styles.
A similar syntax may be used in markup mode; however, in most cases it is preferable to use the simpler syntax explained in [Selecting font and font size], page 291:

\markup \column { \line { \override (font-shape . italic) (font-size . 4)) Idomeneo, } \line { \override (font-family . typewriter) \override (font-series . bold) re di } \override (font-family . sans) Creta } \markup \column { \line { \override (font-name . "TeX Gyre Schola") \caps { small caps: Hello } } \line { \override (font-name . "TeX Gyre Schola") \override (font-features . ("smcp")) \override (font-features . ("onum")) \override (font-style . normal number) \normalstyle: 0123456789 } { old number style: 0123456789 } }
normal style: Hello HELLO

SMALL CAPS: HELLO

true small caps: Hello

normal number style: 0123456789

old number style: 0123456789

stylistic alternate 0: εφπρθ

stylistic alternate 1: ϵϕϖϱϑ

multiple features: Hello 0123456789 εφπρθ

For the full OpenType font feature list see https://www.microsoft.com/typography/otspec/featurelist.htm; for identifying features of OpenType fonts see https://lists.gnu.org/archive/html/lilypond-devel/2017-08/msg00004.html.

Although it is easy to switch between preconfigured fonts, it is also possible to use other fonts. For more information, see [Single entry fonts], page 306, and [Entire document fonts], page 308.

See also

Notation Reference: Section A.8 [The Emmentaler font], page 735, [Music notation inside markup], page 301, Section 5.4.8 [Rotating objects], page 707, [Selecting font and font size], page 291, Section A.12.1 [Font markup], page 755.

Single entry fonts

Almost all outline fonts installed on the operating system and recognized by FontConfig may be used in a score, with the exception of bitmap fonts (which are not supported by design) and OpenType Variation Fonts (which are not supported yet).

LilyPond calls function \pango_font_description_from_string from the Pango library to access fonts; it uses the following syntax form for font names.\footnote{The data is taken from the Pango reference for version 1.46.1; the syntax supported by LilyPond is actually a subset of what Pango provides.}

\texttt{[family-list] [style-options]}

where family-list is a comma-separated list of families optionally terminated by a comma, and style-options a whitespace-separated list of words where each word describes one of style, variant, weight, stretch, or gravity.
The following words are understood as styles: Normal (the default), Roman, Oblique, Italic.
The following words are understood as variants: Small-Caps. Default is no variant.
The following words are understood as stretch values: Ultra-Condensed, Extra-Condensed, Condensed, Semi-Condensed, Semi-Expanded, Expanded, Extra-Expanded, Ultra-Expanded. Default is no stretch.
The following words are understood as gravity values: Not-Rotated, South, Upside-Down, North, Rotated-Left, East, Rotated-Right, West. Default is no gravity.

Assuming the syntax is correct, setting a font name never fails. If none of the font families are known (or no font family is given), FontConfig returns a default font depending on the operating system. If none of the style options are known (or no style option is given), default values are used.

In the following example, the font for the time signature is set to ‘Bitstream Charter’. Since no style option is given, FontConfig uses default values as specified above. For the markup string, the list of font families is set to ‘Bitstream Vera Sans’ and ‘sans-serif’, which tells FontConfig to try ‘Bitstream Vera Sans’ first; if it is not available, it tries the generic font family ‘sans-serif’ as described in [Font families], page 304. The style for the markup is set to ‘Oblique Bold’, which makes FontConfig try to find a font that is both oblique and bold. If that fails, it tries to find an oblique or bold font. If that fails again, it tries to match a font with default style options.

Note that FontConfig also checks whether the requested glyph is actually present in the font. In case it is missing, another font gets tried (following the above algorithm) until the glyph is eventually found. Only if FontConfig fails to find any font with the appropriate glyph a symbol for a missing glyph is shown (which is normally a rectangular box or simply some whitespace).

```
\override Staff.TimeSignature.font-name = "Bitstream Charter"
\override Staff.TimeSignature.font-size = #2
\time 3/4

a'1 \markup {
  \override #'(font-name .
    "Bitstream Vera Sans, sans-serif, Oblique Bold")
    { Vera Oblique Bold }
}
```

Note: If any of the above style options is part of the font (family) name you must use a trailing comma after the name even if you do not select a style option. A typical example is ‘Times New Roman’: If specified as "Times New Roman", FontConfig searches for a font ‘Times New’ in roman style. Only if you say "Times New Roman," this font is really accessed.

Running lilypond on the command line with the following option displays a list of all available fonts on the operating system:

lilypond -dshow-available-fonts
See also

Notation Reference: [Finding fonts], page 303, [Font families], page 304, [Entire document fonts], page 308.

Snippets: Section “Text” in Snippets.

Entire document fonts

It is possible to change the fonts used in LilyPond’s default font families by calling the function `make-pango-font-tree`. The arguments are substitutions for the ‘roman’, ‘sans’ and ‘typewriter’ font families (in that order), followed by a scaling factor. Similar to single fonts (see [Single entry fonts], page 306), font families are set up by using comma-separated lists of font family names, but without style options.\footnote{This implies that, contrary to single fonts, a trailing comma is never necessary.}

Note that `make-pango-font-tree` resets the notation fonts to ‘emmentaler’ as the default.

The example below adjusts the font size in relation to the global staff size.

\begin{verbatim}
paper {
    #(define fonts
        (make-pango-font-tree "Linux Libertine O"
            "Nimbus Sans, Nimbus Sans L"
            "DejaVu Sans Mono"
            (/ staff-height pt 20)))
}
relative c' {
    c1-\markup {\roman, \sans, \typewriter}
}
\end{verbatim}

LilyPond provides an alternative, more flexible interface to set global font families. It allows you to change only specific font family names, leaving others set to default values. The following example has the same effect as the above `make-pango-font-tree` example; the syntax for font family names is identical. If you do not change the staff size from the default of 20 pt, the line containing the `#:factor` keyword is unnecessary.

\begin{verbatim}
paper {
    #(define fonts
        (set-global-fonts
            #:roman "Linux Libertine O"
            #:sans "Nimbus Sans, Nimbus Sans L"
            #:typewriter "DejaVu Sans Mono"
            ; unnecessary if the staff size is default
            #:factor (/ staff-height pt 20))
    }
\end{verbatim}
Additionally, `set-global-fonts` can also set the music notation fonts. The following example has the same effect as the previous examples, because it uses the default notation fonts. For more information, see Section 3.5.4 [Replacing the notation font], page 580.

```latex
\paper {
  #(define fonts
   (set-global-fonts
    #:music "emmentaler" ; default
    #:brace "emmentaler" ; default
    #:roman "Linux Libertine O"
    #:sans "Nimbus Sans, Nimbus Sans L"
    #:typewriter "DejaVu Sans Mono"
    #:factor (/ staff-height pt 20)
   ))
}
```

Note that each call to `set-global-fonts` completely resets both the main notation and text fonts.\(^5\) If any font category is left unspecified, the respective default font (family) gets used for that category. Each call of `set-global-fonts` affects all `\book` blocks that follow it. If there are multiple `\book` blocks and you want to use different fonts for each, simply call `set-global-fonts` again, like this:

```latex
\paper {
  #(define fonts
   (set-global-fonts
    ...
   ))

  \book {
    ...
  }

  \paper {
    #(define fonts
     (set-global-fonts
      ...
     ))

    \book {
      ...
    }
  }
```

Notation Reference: [Finding fonts], page 303, [Font families], page 304, [Single entry fonts], page 306, [Selecting font and font size], page 291, Section A.12.1 [Font markup], page 755, Section 3.5.4 [Replacing the notation font], page 580.

\(^5\) To be more precise, ‘emmentaler’ (with a lowercase ‘e’, which is mandatory in the argument to `#:music` and `#:brace`) is a set of fonts (but not a font family in the FontConfig sense) that LilyPond accesses and manages directly. Instead of various styles, however, it comes with different design sizes, see [Music fonts], page 310, and Section 3.5.4 [Replacing the notation font], page 580. The corresponding FontConfig font names are ‘Emmentaler-size’, where size is one of the numbers 11, 13, 14, 16, 18, 20, 23, and 26.

For braces, the FontConfig font name is ‘Emmentaler-Brace’.
Music fonts

LilyPond neither uses FontConfig nor Pango for accessing music notation fonts but handles them by itself. As a consequence, the interface is different. This section describes how to insert music symbols into markup strings.

Music notation fonts are a collection of specific glyphs that can be accessed with several encodings. The following syntax allows LilyPond’s various Emmentaler glyphs to be used directly in markup mode:

```lilypond
a'1\markup {
  \vcenter {
    \override #'(font-encoding . fetaBraces)
    \lookup "brace120"
    \override #'(font-encoding . fetaText)
    \column { 1 3 sf }
    \override #'(font-encoding . fetaMusic)
    \lookup "noteheads.s0petrucci"
  }
}
```

![Example of music notation symbols](image)

However, all these glyphs except the braces of various sizes are available using the simpler syntax described in [Music notation inside markup], page 301.

When accessing braces with the ‘fetaBraces’ encoding, the size of the brace is specified by the numerical part of the glyph name, in arbitrary units. Any integer from 0 to 575 inclusive may be specified, with 0 giving the smallest brace. The optimum value must be determined by trial and error. These glyphs are all left braces; right braces may be obtained by rotation, see Section 5.4.8 [Rotating objects], page 707.

---

6 LilyPond’s Emmentaler fonts contain three glyph sets: Feta (for modern notation), Parmesan (for ancient notation), and braces. Both Feta and Parmesan are accessed with the ‘fetaMusic’ encoding.
2 Specialist notation

This chapter explains how to create musical notation for specific types of instrument or in specific styles.

Orchestral and ensemble music is not addressed in a separate section; however, several notions commonly useful in orchestral scores are found in [References for opera and stage musicals], page 355.

2.1 Vocal music

This section explains how to typeset vocal music, and make sure that the lyrics will be aligned with the notes of their melody.

2.1.1 Common notation for vocal music

This section discusses issues common to most types of vocal music.

References for vocal music

This section indicates where to find details of notation issues that may arise in any type of vocal music.

- Most styles of vocal music use written text as lyrics. An introduction to this notation is to be found in Section “Setting simple songs” in Learning Manual.
- Vocal music is likely to require the use of markup mode, either for lyrics or for other text elements (characters’ names, etc.). This syntax is described in [Text markup introduction], page 287.
- Ambitus may be added at the beginning of vocal staves, as explained in [Ambitus], page 37.
- Dynamic markings by default are placed below the staff, but in choral music they are usually placed above the staff in order to avoid the lyrics, as explained in [Score layouts for choral], page 353.
See also
Notation Reference: [Text markup introduction], page 287, [Ambitus], page 37, [Score layouts for choral], page 353.
Snippets: Section “Vocal music” in Snippets.

Entering lyrics
Lyrics are entered in a special input mode, which can be introduced by the keyword \lyricmode, or by using \addlyrics or \lyricsto. In this special input mode, the input d is not parsed as the pitch D, but rather as a one-letter syllable of text. In other words, syllables are entered like notes but with pitches replaced by text.

For example:
\lyricmode { Three4 blind mice,2 three4 blind mice2 }

There are two main methods for specifying the horizontal placement of the syllables, either by specifying the duration of each syllable explicitly, as in the example above, or by leaving the lyrics to be aligned automatically to a melody or other voice of music, using \addlyrics or \lyricsto. The former method is described below in [Manual syllable durations], page 317. The latter method is described in [Automatic syllable durations], page 315.

A word or syllable of lyrics begins with an alphabetic character (plus some other characters, see below) and is terminated by any white space or a digit. Later characters in the syllable can be any character that is not a digit or white space.

Because any character that is not a digit or white space is regarded as part of the syllable, a word is valid even if it ends with }, which often leads to the following mistake:
\lyricmode { lah lah lah}

In this example, the } is included in the final syllable, so the opening brace is not balanced and the input file will probably not compile. Instead, braces should always be surrounded with white space:
\lyricmode { lah lah lah }

Punctuation, lyrics with accented characters, characters from non-English languages, or special characters (such as the heart symbol or slanted quotes), may simply be inserted directly into the input file, providing it is saved with UTF-8 encoding. For more information, see Section 3.4.4 [Special characters], page 576.

\relative { d''8 c16 a bes8 f ees' d c4 }
\addlyrics { "Schad' um das schöne grüne Band, }
The full definition of a word start in lyrics mode is somewhat more complex. A word in lyrics mode is one that begins with an alphabetic character, _, ?, !, :, ', the control characters ^A through ^F, ^Q through ^W, ^Y, ^^, any 8-bit character with an ASCII code over 127, or a two-character combination of a backslash followed by one of `, `, " or ".

Great control over the appearance of lyrics comes from using \markup inside the lyrics themselves. For explanation of many options, see Section 1.8.2 [Formatting text], page 287.

### Selected Snippets

#### Formatting lyrics syllables

Markup mode may be used to format individual syllables in lyrics.

```latex
\mel = \relative c' { c4 c c c }
\lyr = \lyricmode {
  Lyrics \markup { \italic can } \markup { \with-color #red contain } \\
  \markup { \fontsize #8 \bold Markup! }
}
```

```
<<
  new Voice = melody \mel \\
  new Lyrics \lyricsto melody \lyr
>>
```

![Lyrics can contain Markup!](/noteheads.s2)

#### Aligning lyrics to a melody

Lyrics are interpreted in \lyricmode and printed in a Lyrics context, see Section 5.1.1 [Contexts explained], page 655.

```latex
new Lyrics \lyricmode { ... }
```

Two variants of \lyricmode additionally set an associated context used to synchronise the lyric syllables to music. The more convenient \addlyrics immediately follows the musical content of the Voice context with which it should be synchronised, implicitly creating a Lyrics context of its own. The more versatile \lyricsto requires both specifying the associated Voice context by name and explicitly creating a containing Lyrics context. For details see [Automatic syllable durations], page 315.

Lyrics can be aligned with melodies in two main ways:
- Lyrics can be aligned automatically, with the durations of the syllables being taken from another voice of music or (in special circumstances) an associated melody, using \addlyrics,
\lyricsto, or by setting the associatedVoice property. For more details, see [Automatic syllable durations], page 315.

```
\new Staff <<
\time 2/4
\new Voice = "one" \relative { 
  \voiceOne 
  c'4 b8. a16 g4. r8 a4 ( b ) c2 
} 
\new Voice = "two" \relative { 
  \voiceTwo 
  s2 s4. f'8 e4 d c2 
} 
>>

% takes durations and alignment from notes in "one"
\new Lyrics \lyricsto "one" { 
  Life is __ _ love, live __ life. 
}

% takes durations and alignment from notes in "one" initially
% then switches to "two"
\new Lyrics \lyricsto "one" { 
  No more let 
  \set associatedVoice = "two" % must be set one syllable early 
  sins and sor -- rows grow. 
} 
```

The first stanza shows the normal way of entering lyrics. The second stanza shows how the voice from which the lyric durations are taken can be changed. This is useful if the words to different stanzas fit the notes in different ways and all the durations are available in Voice contexts. For more details, see Section 2.1.3 [Stanzas], page 343.

- Lyrics can be aligned independently of the duration of any notes if the durations of the syllables are specified explicitly, and entered with \lyricmode.

```
\new Voice = "one" \relative { 
  \time 2/4 
  c'4 b8. a16 g4. f8 e4 d c2 
} 

% uses previous explicit duration of 2;
\new Lyrics \lyricmode { 
  Joy to the earth! 
```
% explicit durations, set to a different rhythm
\new Lyrics \lyricmode {
  Life4 is love,2. live4 life.2
}

The first stanza is not aligned with the notes because the durations were not specified, and
the previous value of 2 is used for each word.

The second stanza shows how the words can be aligned quite independently from the notes.
This is useful if the words to different stanzas fit the notes in different ways and the re-
quired durations are not available in a music context. For more details see [Manual syllable
durations], page 317. This technique is also useful when setting dialogue over music; for
examples showing this, see [Dialogue over music], page 361.

Internals Reference: Section “Lyrics” in Internals Reference.

Automatic syllable durations

Lyrics can be automatically aligned to the notes of a melody in three ways:

• by specifying the named Voice context containing the melody with \lyricsto,
• by introducing the lyrics with \addlyrics and placing them immediately after the Voice
  context containing the melody,
• by setting the associatedVoice property, the alignment of the lyrics may be switched to
  a different named Voice context at any musical moment.

In all three methods hyphens can be drawn between the syllables of a word and extender lines
can be drawn beyond the end of a word. For details, see [Extenders and hyphens], page 323.

The Voice context containing the melody to which the lyrics are being aligned must not have
“died”, or the lyrics after that point will be lost. This can happen if there are periods when
that voice has nothing to do. For methods of keeping contexts alive, see Section 5.1.3 [Keeping
contexts alive], page 660.

Using \lyricsto

Lyrics can be aligned under a melody automatically by specifying the named Voice context
containing the melody with \lyricsto:

<<
  \new Voice = "melody" \relative {
    a'1 a4. a8 a2
  }

Joy to the earth!
Life is love, live life.
\new Lyrics \lyricsto "melody" {

These are the words
}

>>

These are the words

This aligns the lyrics to the notes of the named Voice context, which must already exist. Therefore normally the Voice context is specified first, followed by the Lyrics context. The lyrics themselves follow the \lyricsto command. The \lyricsto command invokes lyric mode automatically. By default, the lyrics are placed underneath the notes. For other placements, see [Placing lyrics vertically], page 325.

Using \addlyrics

The \addlyrics command is just a convenient shortcut that can sometimes be used instead of having to set up the lyrics through a more complicated LilyPond structure.

{ MUSIC }
\addlyrics { LYRICS }

is the same as

\new Voice = "blah" { MUSIC }
\new Lyrics \lyricsto "blah" { LYRICS }

Here is an example,

{ 
\time 3/4
\relative { c'2 e4 g2. }
\addlyrics { play the game }
}

play the game

More stanzas can be added by adding more \addlyrics sections:

{ 
\time 3/4
\relative { c'2 e4 g2. }
\addlyrics { play the game }
\addlyrics { speel het spel }
\addlyrics { joue le jeu }
}

play the game

speel het spel

joue le jeu

The command \addlyrics cannot handle polyphonic settings. Also, it cannot be used to associate lyrics to a TabVoice. For these cases one should use \lyricsto.
Using associatedVoice

The melody to which the lyrics are being aligned can be changed by setting the associatedVoice property,

\set associatedVoice = "lala"

The value of the property (here: "lala") should be the name of a Voice context. For technical reasons, the \set command must be placed one syllable before the one to which the change in voice is to apply.

Here is an example demonstrating its use:

<<
\new Staff <<
\time 2/4
\new Voice = "one" \relative { 
\voiceOne
  c''4 b8. a16 g4. r8 a4 ( b ) c2 
}
\new Voice = "two" \relative { 
\voiceTwo
  s2 s4. f'8 e8 d4. c2 
}
>>
% takes durations and alignment from notes in "one" initially
% then switches to "two"
\new Lyrics \lyricsto "one" {
  No more let
  \set associatedVoice = "two" % must be set one syllable early
  sins and sor -- rows grow.
}
>>

No more let sins and sorrows grow.

Notation Reference: [Extenders and hyphens], page 323, Section 5.1.3 [Keeping contexts alive], page 660, [Placing lyrics vertically], page 325.

Manual syllable durations

In some complex vocal music, it may be desirable to place lyrics completely independently of notes. In this case do not use \lyricsto or \addlyrics and do not set associatedVoice. Syllables are entered like notes – but with pitches replaced by text – and the duration of each syllable is entered explicitly after the syllable.

Hyphenated lines may be drawn between syllables as usual, but extender lines cannot be drawn when there is no associated voice.

Here are two examples:

<<
\new Voice = "melody" \relative {
  c''2 a f f e e
This technique is useful when writing dialogue over music, see [Dialogue over music], page 361.

To change syllable alignment, simply override the self-alignment-X property:

<<
\new Voice = "melody" \relative {
  \time 3/4
  c'2 e4 g2 f
}
\new Lyrics \lyricmode {
  \override LyricText.self-alignment-X = #LEFT
  play1 a4 game4
}
>>
Multiple syllables to one note

In order to assign more than one syllable to a single note with spaces between the syllables, you can surround the phrase with quotes or use a _ character. Alternatively, you can use the tilde symbol (~) to get a lyric tie.

\begin{Verbatim}
\relative { 
  \autoBeamOff
  r8 b’ c fis, fis c’ b e,
} 
\addlyrics 
\{ 
  % Ensure hyphens are visible
  \override LyricHyphen.minimum-distance = #1.0 
  Che_in ques -- ta_e_in quel -- l’al -- tr’on -- da
} 
\addlyrics \{ "Che in" ques -- “ta e in” quel -- l’al -- tr’on -- da \}
\addlyrics \{ Che-in ques -- ta-e-in quel -- l’al -- tr’on -- da \}
\end{Verbatim}

Multiple notes to one syllable

Sometimes, particularly in Medieval and baroque music, several notes are sung on one syllable; this is called melisma, see Section “melisma” in Music Glossary. The syllable to a melisma is usually left-aligned with the first note of the melisma.

When a melisma occurs on a syllable other than the last one in a word, that syllable is usually joined to the following one with a hyphenated line. This is indicated by placing a double hyphen, --, immediately after the syllable.

Alternatively, when a melisma occurs on the last or only syllable in a word an extender line is usually drawn from the end of the syllable to the last note of the melisma. This is indicated by placing a double underscore, _ _, immediately after the word.
There are five ways in which melismata can be indicated:

- Melismata are created automatically over notes which are tied together:

  \[
  \begin{align*}
  \new Voice = "melody" \relative { \\
  \time 3/4 \\
  f''4 g2 \sim | \\
  4 e2 \sim | \\
  8 
  } \\
  \new Lyrics \lyricsto "melody" { \\
  Ky -- ri -- e -- 
  } \\
  \end{align*}
  \]

- Melismata can be created automatically from the music by placing slurs over the notes of each melisma. This is the usual way of entering lyrics:

  \[
  \begin{align*}
  \new Voice = "melody" \relative { \\
  \time 3/4 \\
  f''4 g8 ( f e f ) \\
  e8 ( d e2 ) 
  } \\
  \new Lyrics \lyricsto "melody" { \\
  Ky -- ri -- e -- 
  } \\
  \end{align*}
  \]

  Note that phrasing slurs do not affect the creation of melismata.

- Notes are considered a melisma if they are manually beamed, providing automatic beaming is switched off. See [Setting automatic beam behavior], page 94.

  \[
  \begin{align*}
  \new Voice = "melody" \relative { \\
  \time 3/4 \\
  \autoBeamOff \\
  f''4 g8[ f e f] \\
  e2. 
  } \\
  \new Lyrics \lyricsto "melody" { \\
  Ky -- ri -- e 
  } \\
  \end{align*}
  \]
Clearly this is not suited to melismata over notes which are longer than eighth notes.

- An unslurred group of notes will be treated as a melisma if they are bracketed between \melisma and \melismaEnd.

\[
\begin{align*}
\new Voice = & "melody" \relative { \\
\time 3/4 \\
f''4 g8 \\
\melisma \\
f e f \\
\melismaEnd \\
e2.
}\end{align*}
\]

\[
\text{Ky -- ri -- e}
\]

- A melisma can be defined entirely in the lyrics by entering a single underscore character, _, for every extra note that has to be added to the melisma.

\[
\begin{align*}
\new Voice = & "melody" \relative { \\
\time 3/4 \\
f''4 g8 f e f \\
e8 d e2
}\end{align*}
\]

\[
\text{Ky -- ri -- _ _ _ e _ _ _}
\]

It is possible to have ties, slurs and manual beams in the melody without their indicating melismata. To do this, set _melismaBusyProperties_.

\[
\begin{align*}
\new Voice = & "melody" \relative { \\
\time 3/4 \\
\set melismaBusyProperties = #'() \\
c'4 d ( e ) \\
g8 [ f ] f4 - 4
}\end{align*}
\]
Other settings for \melismaBusyProperties can be used to selectively include or exclude ties, slurs, and beams from the automatic detection of melismata; see \melismaBusyProperties in Section “Tunable context properties” in Internals Reference.

Alternatively, if all melismata indications are to be ignored, \ignoreMelismata may be set true; see [Stanzas with different rhythms], page 345.

If a melisma is required during a passage in which \melismaBusyProperties is active, it may be indicated by placing a single underscore in the lyrics for each note which should be included in the melisma:

```latex
<<
\new Voice = "melody" \relative {
  \time 3/4
  \set \melismaBusyProperties = #'(\)
  c'4 d ( e )
  g8 [ f ] ~ 4 ~ f 
}
\new Lyrics \lyricsto "melody" {
  Ky -- ri -- e -- le -- i -- son
}
>>
```

Predefined commands
\autoBeamOff, \autoBeamOn, \melisma, \melismaEnd.

Notation Reference: [Aligning lyrics to a melody], page 313, [Automatic syllable durations], page 315, [Setting automatic beam behavior], page 94, [Stanzas with different rhythms], page 345.
Internals Reference: Section “Tunable context properties” in Internals Reference.

Known issues and warnings
Extender lines under melismata are not created automatically; they must be inserted manually with a double underscore.
Extenders and hyphens

In the last syllable of a word, melismata are sometimes indicated with a long horizontal line starting in the melisma syllable, and ending in the next one. Such a line is called an extender line, and it is entered as ‘ \_\_\_’ (note the spaces before and after the two underscore characters).

Note: Melismata are indicated in the score with extender lines, which are entered as one double underscore; but short melismata can also be entered by skipping individual notes, which are entered as single underscore characters; these do not make an extender line to be typeset by default.

Centered hyphens are entered as ‘ \_\_’ between syllables of a same word (note the spaces before and after the two hyphen characters). The hyphen will be centered between the syllables, and its length will be adjusted depending on the space between the syllables.

In tightly engraved music, hyphens can be removed. Whether this happens can be controlled with the minimum-distance (minimum distance between two syllables) and the minimum-length (threshold below which hyphens are removed) properties of LyricHyphen.

By default a hyphen is not repeated after a system break when the next line begins with a new syllable. Setting the after-line-breaking property to \#t allows hyphens to be drawn in such situations.

See also

Internals Reference: Section “LyricExtender” in Internals Reference, Section “LyricHyphen” in Internals Reference.

Gradual changes of vowel

Vowel transitions (gradual changes of vowel or sustained consonant), which may be indicated by arrows between syllables, are entered with the command \vowelTransition (see Gould pp. 452–453). The arrow shows the length of the transition, and it is by default always drawn (space is added if necessary in tightly engraved music). Ties between notes of unchanged pitch or slurs show that there is no new articulation, despite a change of vowel. The minimum length of the arrows may be adjusted with the minimum-length property of VowelTransition.

\{ 
c'2 c'
\set melismaBusyProperties = #'()
c'2 - c'
\time 3/2
d'4 ( e' f' e' f'2
e'2.)
\}
\addlyrics
{ 
Ah \vowelTransition oh,
ah \vowelTransition oh,
ah \vowelTransition _ _ _ _
oh.
}
2.1.2 Techniques specific to lyrics

Working with lyrics and variables

Variables containing lyrics can be created, but the lyrics must be entered in lyric mode:

```latex
musicOne = \relative { 
c''4 b8. a16 g4. f8 e4 d c2 
}
verseOne = \lyricmode { 
Joy to the world, the Lord is come. 
}
```

Durations do not need to be added if the variable is to be invoked with `\addlyrics` or `\lyricsto`.

For different or more complex orderings, the best way is to define the music and lyric variables first, then set up the hierarchy of staves and lyrics, omitting the lyrics themselves, and then add the lyrics using `\context` underneath. This ensures that the voices referenced by `\lyricsto` have always been defined earlier. For example:

```latex
sopranoMusic = \relative { c''4 c c c }
contraltoMusic = \relative { a'4 a a a }
sopranoWords = \lyricmode { Sop -- ra -- no words }
contraltoWords = \lyricmode { Con -- tral -- to words }
```

```latex
\score {
  \new ChoirStaff << 
  \new Staff {
    \new Voice = "sopranos" {
        \addlyrics {
            Joy to the world, the Lord is come.
        }
    }
  }
  \context 
  \lyricsto "sopranos" { 
    \lyricsto "contraltos" { 
        Joy to the world, the Lord is come.
    }
  }
} 
```

See also

\sopranoMusic
} 
\new Lyrics = "sopranos"
\new Lyrics = "contraltos"
\new Staff {
  \new Voice = "contraltos" {
    \contraltoMusic
  }
}
\context Lyrics = "sopranos" {
  \lyricsto "sopranos" {
    \sopranoWords
  }
}
\context Lyrics = "contraltos" {
  \lyricsto "contraltos" {
    \contraltoWords
  }
}
>

![Staff notation]

Sop-ra-no words
Contral-to words

See also

Notation Reference: [Placing lyrics vertically], page 325.

Placing lyrics vertically

Depending on the type of music, lyrics may be positioned above the staff, below the staff, or between staves. Placing lyrics below the associated staff is the easiest, and can be achieved by simply defining the Lyrics context below the Staff context:

\score {
  \new Staff {
    \new Voice = "melody" {
      \relative { c'4 c c c }
    }
  }
  \new Lyrics {
    \lyricsto "melody" {
      Here are the words
    }
  }
}
Chapter 2: Specialist notation

Lyrics may be positioned above the staff using one of two methods. The simplest (and preferred) method is to use the same syntax as above and explicitly specify the position of the lyrics:

\score { << 
  \new Staff = "staff" { 
    \new Voice = "melody" { 
      \relative { c'4 c c c } 
    } }
  \new Lyrics \with { alignAboveContext = "staff" } { 
    \lyricsto "melody" { 
      Here are the words 
    } }
} >> 

Alternatively, a two-step process may be used. First the Lyrics context is declared (without any content) before the Staff and Voice contexts, then the \lyricsto command is placed after the Voice declaration it references by using \context, as follows:

\score { << 
  \new Lyrics = "lyrics" \with { 
    % lyrics above a staff should have this override 
    \override VerticalAxisGroup.staff-affinity = #DOWN 
  } 
  \new Staff { 
    \new Voice = "melody" { 
      \relative { c'4 c c c } 
    } }
  \context Lyrics = "lyrics" { 
    \lyricsto "melody" { 
      Here are the words 
    } }
} >> 

Here are the words

When there are two voices on separate staves the lyrics may be placed between the staves using either of these methods. Here is an example of the second method:

\score { 
\new ChoirStaff << 
\new Staff { 
\new Voice = "sopranos" { 
\relative { c'4 c c c } 
} 
}\new Lyrics = "sopranos" 
\new Lyrics = "contraltos" \with { 
% lyrics above a staff should have this override 
\override VerticalAxisGroup.staff-affinity = #DOWN 
} 
\new Staff { 
\new Voice = "contraltos" { 
\relative { a'4 a a a } 
} 
}\context Lyrics = "sopranos" { 
\lyricsto "sopranos" { 
Sop -- ra -- no words 
} 
}\context Lyrics = "contraltos" { 
\lyricsto "contraltos" {

} 
} 
>> 
}

Other combinations of lyrics and staves may be generated by elaborating these examples, or by examining the templates in the Learning Manual, see Section “Vocal ensembles templates” in Learning Manual.

Selected Snippets
**Obtaining 2.12 lyrics spacing in newer versions**

The vertical spacing engine changed since version 2.14. This can cause lyrics to be spaced differently.

It is possible to set properties for **Lyric** and **Staff** contexts to get the spacing engine to behave as it did in version 2.12.

```plaintext
global = {
  \key d \major
  \time 3/4
}

sopMusic = \relative c' {
  % VERSE ONE
  fis4 fis fis | \break
  fis4. e8 e4
}

altoMusic = \relative c' {
  % VERSE ONE
  d4 d d |
  d4. b8 b4 |
}

tenorMusic = \relative c' {
  a4 a a |
  b4. g8 g4 |
}

bassMusic = \relative c {
  d4 d d |
  g,4. g8 g4 |
}

words = \lyricmode {
  Great is Thy faith -- ful -- ness,
}

\score {
  \new ChoirStaff <<
    \new Lyrics = sopranos
    \new Staff = women <<
      \new Voice = "sopranos" {

Notation Reference: Section 5.1.7 [Context layout order], page 672, Section 5.1.2 [Creating and referencing contexts], page 657.

Placing syllables horizontally

To increase the spacing between lyrics, set the minimum-distance property of LyricSpace.

```
\relative c' {
 c c c c
 \override Lyrics.LyricSpace.minimum-distance = #1.0
c c c c
}
\addlyrics {
 longtext longtext longtext longtext
 longtext longtext longtext longtext
}
```

To make this change for all lyrics in the score, set the property in the \layout block.

```
\score {
 \relative {
 c' c c c
c c c c
 }
 \addlyrics {
 longtext longtext longtext longtext
 longtext longtext longtext longtext
}
```
Selected Snippets

**Lyrics alignment**

Horizontal alignment for lyrics can be set by overriding the `self-alignment-X` property of the `LyricText` object. `-1` is left, `0` is center and `1` is right; however, you can use `#LEFT`, `#CENTER` and `#RIGHT` as well.

\[ \text{layout} \{ \text{ragged-right} = \#f \} \]
\[ \text{relative c'' \{} \]
\[ \text{c1} \]
\[ \text{c1} \]
\[ \text{c1} \]
\[ \text{\}} \]
\[ \text{\addlyrics} \{ \]
\[ \text{\once \override \text{LyricText.self-alignment-X} = \#LEFT} \]
\[ \text{"This is left-aligned"} \]
\[ \text{\once \override \text{LyricText.self-alignment-X} = \#CENTER} \]
\[ \text{"This is centered"} \]
\[ \text{\once \override \text{LyricText.self-alignment-X} = \#1} \]
\[ \text{"This is right-aligned"} \]
\[ \text{\}} \]

This is left-aligned This is centered This is right-aligned

**Known issues and warnings**

Checking to make sure that text scripts and lyrics are within the margins requires additional calculations. To speed up processing slightly, this feature can be disabled:

\[ \text{\override Score.PaperColumn.keep-inside-line = \#f} \]

To make lyrics avoid bar lines as well, use

\[ \text{\layout \{ \]
\[ \text{\context \{ \]
Lyrics and repeats

Simple repeats

Repeats in music are fully described elsewhere; see Section 1.4 [Repeats], page 166. This section explains how to add lyrics to repeated sections of music.

Lyrics to a section of music that is repeated should be surrounded by exactly the same repeat construct as the music, if the words are unchanged.

```
\score { <<
  \new Staff {
    \new Voice = "melody" {
      \relative {
        a'4 a a a
        \repeat volta 2 { b4 b b b }
      }
    }
  }
  \new Lyrics {
    \lyricsto "melody" {
      Not re--peat--ed. 
      \repeat volta 2 { Re--peat--ed twice. }
    }
  }
>>
}
```

The words will then be correctly expanded if the repeats are unfolded.

```
\score {
  \unfoldRepeats {
    \new Staff {
      \new Voice = "melody" {
        \relative {
          a'4 a a a
          \repeat volta 2 { b4 b b b }
        }
      }
    }
    \new Lyrics {
      \lyricsto "melody" {
      }
    }
  }
}
```
If the repeated section is to be unfolded and has different words, simply enter all the words:

\begin{verbatim}
\score {
  \new Staff {
    \new Voice = "melody" {
      \relative {
        a'4 a a a
        \repeat unfold 2 { b4 b b b }
      }
    }
  }
  \new Lyrics {
    \lyricsto "melody" {
      Not re-peat-ed.
      The first time words.
      Second time words.
    }
  }
}
\end{verbatim}

When the words to a repeated volta section are different, the words to each repeat must be entered in separate \texttt{Lyrics} contexts, correctly nested in parallel sections:

\begin{verbatim}
\score {
  \new Staff {
    \new Voice = "melody" {
      \relative {
        a'4 a a a
        \repeat volta 2 { b4 b b b }
      }
    }
    \new Lyrics \lyricsto "melody" {
      Not re-peat-ed.
    }
  }
}
\end{verbatim}
\new \Lyrics{
\set \associatedVoice = "melody"
Second time words.
}

\set \associatedVoice = "melody"
Not repeated.
The first time words.
Second time words.

More verses may be added in a similar way:
\score {
<<
\new \Staff {
\new \Voice = "singleVoice" {
\relative {
 a'4 a a a 
\repeat volta 3 { b4 b b b }
c4 c c c
}
}
}\new \Lyrics \lyricsto "singleVoice" {
Not repeated.
Second time words.
}

\new \Lyrics {
\set \associatedVoice = "singleVoice"
Second time words.
}

\new \Lyrics {
\set \associatedVoice = "singleVoice"
The third time words.
}

>>
The end section.
However, if this construct is embedded within a multi-staff context such as a ChoirStaff the lyrics of the second and third verses will appear beneath the bottom staff.

To position them correctly use alignBelowContext:

\score { <<
  \new Staff {
    \new Voice = "melody" {
      \relative {
        a'4 a a a
      \repeat volta 3 { b4 b b b }
      }
      c4 c c c
    }
  }
  \new Lyrics = "firstVerse" \lyricsto "melody" {
    Not re--peat--ed.
    <<
    { The first time words. }
  }
  \new Lyrics = "secondVerse" \with { alignBelowContext = "firstVerse" } {
    \set associatedVoice = "melody"
    Sec--ond time words.
  }
  \new Lyrics = "thirdVerse" \with { alignBelowContext = "secondVerse" } {
    \set associatedVoice = "melody"
    The third time words.
  }
} >>

The end sec--tion.

} \new Voice = "harmony" {
  \relative {
    f'4 f f f \repeat volta 2 { g8 g4 g2 } a4 a8. a16 a2
  }
} >>
Repeats with alternative endings

If the words of the repeated section are the same, and none of the \alternative blocks start with a rest, exactly the same structure can be used for both the lyrics and music. This has the advantage that \unfoldRepeats will expand both music and lyrics correctly.

\score {
  \new Staff {
    \time 2/4
    \new Voice = "melody" {
      \relative {
        a'4 a a a
        \repeat volta 2 { b4 b }
        \alternative {
          \volta 1 { b b }
          \volta 2 { b c }
        }
      }
    }
  }
}
\new Lyrics {
  \lyricsto "melody" {
    \repeat volta 2 { Re--peat--ed. }
    \alternative {
      \volta 1 { ed twice. }
      \volta 2 { ed twice. }
    }
  }
}
}

But when the repeated section has different words, or when one of the \alternative blocks starts with a rest, a repeat construct cannot be used around the words and \skip commands have to be inserted manually to skip over the notes in the alternative sections which do not apply.
Note: do not use an underscore, _, to skip notes – an underscore indicates a melisma, causing the preceding syllable to be left-aligned.

\textbf{Note:} The \texttt{\textbackslash skip} command must be followed by a number, but this number is ignored in lyrics which derive their durations from the notes in an associated melody through \texttt{\textbackslash addlyrics} or \texttt{\textbackslash lyricsto}. Each \texttt{\textbackslash skip} skips a single note of any value, irrespective of the value of the following number.

\begin{verbatim}
\score {
  <<
  \new Staff {
    \time 2/4
    \new Voice = "melody" {
      \relative {
        \repeat volta 2 { b'4 b }
        \alternative {
          \volta 1 { b b }
          \volta 2 { b c }
        }
        c4 c
      }
    }
  }
  \new Lyrics {
    \lyricsto "melody" {
      The first time words.
      \repeat unfold 2 { \skip 1 }
      End here.
    }
  }
  \new Lyrics {
    \lyricsto "melody" {
      Sec -- ond
      \repeat unfold 2 { \skip 1 }
      time words.
    }
  }
  >>
}
\end{verbatim}

When a note is tied over into two or more alternative endings a tie is used to carry the note into the first alternative ending and a \texttt{\textbackslash repeatTie} is used in the second and subsequent endings. This structure causes difficult alignment problems when lyrics are involved and increasing the length of the alternative sections so the tied notes are contained wholly within them may give a more acceptable result.
The tie creates a melisma into the first alternative, but not into the second and subsequent alternatives, so to align the lyrics correctly it is necessary to disable the automatic creation of melismata over the volta section and insert manual skips.

\score {
  \new Staff {
    \time 2/4
    \new Voice = "melody" {
      \relative {
        \set melismaBusyProperties = #'()
        \repeat volta 2 { b'4 b ~}
        \alternative {
          \volta 1 { b b }
          \volta 2 { b \repeatTie c }
        }
        \unset melismaBusyProperties
c4 c
      }
    }
  }
}

\new Lyrics {
  \lyricsto "melody" {
    \repeat volta 2 { Here's a _ _ }
    \alternative {
      \volta 1 { \skip 1 verse }
      \volta 2 { \skip 1 sec }
    }
    ond one.
  }
}

Here's a verse second one.

Note that if \unfoldRepeats is used around a section containing \repeatTie, the \repeatTie should be removed to avoid both types of tie being printed.

When the repeated section has different words a \repeat cannot be used around the lyrics and \skip commands need to be inserted manually, as before.

\score {
  \new Staff {
    \time 2/4
    \new Voice = "melody" {
      \relative {
        \repeat volta 2 { b'4 b ~}
        \alternative {
          \volta 1 { b b }
          \volta 2 { b \repeatTie c }
        }
      }
    }
  }
}
Here's a __ verse.
\repeat unfold 2 { \skip 1 }
}
\new Lyrics {
\lyricsto "melody" {
  Here's one
  \repeat unfold 2 { \skip 1 }
  more to sing.
}
}

If you wish to show extenders and hyphens into and out of alternative sections these must be inserted manually.
\score {
<<
  \new Staff {
    \time 2/4
    \new Voice = "melody" {
      \relative {
        \repeat volta 2 { b'4 b ~}
        \alternative {
          \ volta 1 { b b }
          \ volta 2 { b \repeatTie c }
        }
        c4 c
      }
    }
  }
  \new Lyrics {
    \lyricsto "melody" {
      Here's a __ verse.
      \repeat unfold 2 { \skip 1 }
    }
  }
}
Here's "a_"
\skip 1
"_" sec -- ond one.
}
}

>>
}

---

Divisi lyrics
When just the words and rhythms of the two parts differ with the pitches remaining the same, temporarily turning off the automatic detection of melismata and indicating the melisma in the lyrics may be the appropriate method to use:
\score {
<<
\new Voice = "melody" {
\relative c' {
\set melismaBusyProperties = #'() 
\slurDown
\slurDashed
e4 e8 ( e ) c4 c |
\unset melismaBusyProperties
c }
\new Lyrics \lyricsto "melody" {
They shall not o -- ver -- come
}
\new Lyrics \lyricsto "melody" {
We will _
}

}>>
}

---

They shall not o-ver-come
We will

When both music and words differ it may be better to display the differing music and lyrics by naming voice contexts and attaching lyrics to those specific contexts:
\score {

}
It is common in choral music to have a voice part split for several measures. The << {...} \ {...} >> construct, where the two (or more) musical expressions are separated by double backslashes, might seem the proper way to set the split voices. This construct, however, will assign all the expressions within it to NEW Voice contexts which will result in no lyrics being set for them since the lyrics will be set to the original voice context – not, typically, what one wants. The temporary polyphonic passage is the proper construct to use, see section Temporary polyphonic passages in [Single-staff polyphony], page 195.

Polyphony with shared lyrics

When two voices with different rhythms share the same lyrics, aligning the lyrics to one of the voices may lead to problems in the other voice. For example, the second lyric extender below is too short, since the lyrics are aligned only to the top voice:

\new Staff <<
\new Voice = "sopranoVoice" { \voiceOne \soprano }

\new Staff <<
\new Voice = "melody" {
    \relative {
        \new Voice = "melody" {
            \new Voice = "splitpart" {
                \oneVoice
                \relative {
                    \new Voice = "splitpart" {
                        \relative {
                            \new Voice = "melody" {
                                \lyricsto "melody" {
                                    They shall not o -- ver -- come
                                }
                                \lyricsto "splitpart" {
                                    We will
                                }
                            }
                        }
                    }
                }
            }
        }
    }
}

They shall not o-ver-come
We will
\new Voice { \voiceTwo \alto }
\new Lyrics \lyricsto "sopranoVoice" \words

To get the desired result, align the lyrics to a new NullVoice context containing a suitable combination of the two voices. The notes of the NullVoice context do not appear on the printed page, but can be used to align the lyrics appropriately:

soprano = \relative { b'8( c d c) d2 }
alto = \relative { g'2 b8( a g a) }
aligner = \relative { b'8( c d c) b( a g a) }
words = \lyricmode { la ___ la ___ }

\new Staff <<
\new Voice { \voiceOne \soprano }
\new Voice { \voiceTwo \alto }
\new NullVoice = "aligner" \aligner
\new Lyrics \lyricsto "aligner" \words

This method also can be used with the \partCombine function, which does not allow lyrics on its own:

soprano = \relative { b'8( c d c) d2 }
alto = \relative { g'2 b8( a g a) }
aligner = \relative { b'8( c d c) b( a g a) }
words = \lyricmode { la ___ la ___ }

\new Staff <<
\new Voice \partCombine \soprano \alto
\new NullVoice = "aligner" \aligner
\new Lyrics \lyricsto "aligner" \words

Known issues and warnings

The \addlyrics function only works with Voice lyrics and so cannot be used with NullVoice.
The \partCombine function is described in [Automatic part combining], page 205.
Lastly, this method can be used even when the voices are in different staves, and is not limited to only two voices:

\begin{verbatim}
soprano = \relative { b'8 ( c d c) d2 }
soprano = \relative { g'2 b8( a b4) }
soprano = \relative { d'2 g4( fis8 g) }
soprano = \relative { b'8( c d c) d( d d d) }
\end{verbatim}

\begin{verbatim}
\new ChoirStaff \with {\accepts NullVoice} <<
\new Staff \soprano
\new NullVoice = "aligner" \aligner
\new Lyrics \lyricsto "aligner" \words
\new Staff \partCombine \altoOne \altoTwo
>>
\end{verbatim}

2.1.3 Stanzas

Adding stanza numbers

Stanza numbers can be added by setting stanza, e.g.,

\begin{verbatim}
\new Voice \relative {
   \time 3/4 g'2 e4 a2 f4 g2.
} \addlyrics {
   \set stanza = "1. "
   Hi, my name is Bert.
} \addlyrics {
   \set stanza = "2. "
   Oh, ché -- ri, je t'aime
}
\end{verbatim}

1. Hi, my name is Bert.
2. Oh, ché - ri, je t’aime

These numbers are put just before the start of the first syllable. Two lines of a stanza can also be grouped together, for example in case of a repeat with different lyrics:

\begin{verbatim}
\new Voice \relative {
   \time 3/4 g'2 e4 a2 f4 g2.
} \addlyrics {
   \set stanza = "1. "
   Hi, my name is Bert.
} \addlyrics {
   \set stanza = "2. "
   Oh, ché -- ri, je t'aime
}
\end{verbatim}

\begin{verbatim}
\leftbrace = \markup {
   \override #(font-encoding . fetaBraces)
   \lookup "brace80"
}
\end{verbatim}

\begin{verbatim}
\new Staff \soprano
\new NullVoice = "aligner" \aligner
\new Lyrics \lyricsto "aligner" \words
\new Staff \partCombine \altoOne \altoTwo
\end{verbatim}
\set stanza = \markup { 
  \column { \vspace #.33 "1. 
  \leftbrace 
} 
Child, you're mine and I love you. 
Lend thine ear to what I say. 
}

\new Voice { 
\repeat volta 2 { 
c'8 c' c' c' c' c' c'4 
c'8 c' c' c' c' c' c'4 
} 
} 
\addlyrics { \stanzaOneOne } 
\addlyrics { \stanzaOneThree }

\begin{music}
\note { 
\clef bass 
1. \{ Child, you're mine and I love you. 
Child, I have no greater joy 
\}

Lend thine ear to what I say. 
Than to have you walk in truth.
\end{music}

Adding dynamics marks to stanzas

Stanzas differing in loudness may be indicated by putting a dynamics mark before each stanza. In LilyPond, everything coming in front of a stanza goes into the StanzaNumber object; dynamics marks are no different. For technical reasons, you have to set the stanza outside \lyricmode:

text = { 
\set stanza = \markup { \dynamic "ff" "1. 
\lyricmode { 
  Big bang 
} 
} 
}

\new Voice = "tune" { 
\time 3/4 
g'4 c'2 
} 
\new Lyrics \lyricsto "tune" \text
Adding singers’ names to stanzas

Names of singers can also be added. They are printed at the start of the line, just like instrument names. They are created by setting `vocalName`. A short version may be entered as `shortVocalName`.

```latex
\new Voice \relative { \time 3/4 g'2 e4 a2 f4 g2. } \addlyrics { \set vocalName = "Bert " Hi, my name is Bert. } \addlyrics { \set vocalName = "Ernie " Oh, ché -- ri, je t’aime }
```

Stanzas with different rhythms

Often, different stanzas of one song are put to one melody in slightly differing ways. Such variations can still be captured with `\lyricsto`.

Ignoring melismata

One possibility is that the text has a melisma in one stanza, but multiple syllables in another. One solution is to make the faster voice ignore the melisma. This is done by setting `ignoreMelismata` in the Lyrics context.

```latex
<< \relative \new Voice = "lahlah" { \set Staff.autoBeaming = ##f c'4 \slurDotted f8.[(g16)] a4 } \new Lyrics \lyricsto "lahlah" { more slow -- ly } \new Lyrics \lyricsto "lahlah" { go \set ignoreMelismata = ##t fas -- ter \unset ignoreMelismata
```
known issues and warnings

Unlike most \set commands, \set ignoreMelismata does not work if prefixed with \once. It is necessary to use \set and \unset to bracket the lyrics where melismata are to be ignored.

adding syllables to grace notes

By default, grace notes (e.g., via \grace) do not get assigned syllables when using \lyricsto, but this behavior can be changed:

<<
\new Voice = melody \relative \c' {
  f'4 \appoggiatura a32 b4
  \grace { f16 a16 } b2
  \afterGrace b2 { f16[ a16] }
  \appoggiatura a32 b4
  \acciaccatura a8 b4
}
\new Lyrics
\lyricsto melody {
  normal
  \set includeGraceNotes = ##t
  case,
  gra -- ce case,
  after -- grace case,
  \set ignoreMelismata = ##t
  app. case,
  acc. case.
}
>>

normal case, grace case, aftergrace case, app. case, acc. case.

known issues and warnings

Like associatedVoice, includeGraceNotes needs to be set at latest one syllable before the one which is to be put under a grace note. In the case of a grace note at the very beginning of a piece of music, using a \with, or a \context block within \layout, is recommended:

<<
\new Voice = melody \relative c' {
  \grace { c16( d e f }
  g1) f
}
>>
Switching to an alternative melody

More complex variations in setting lyrics to music are possible. The melody to which the lyrics are being set can be changed from within the lyrics by setting the `associatedVoice` property:

\new Lyrics \lyricsto \melody { \includeGraceNotes = ##t } 
\lyricsto \melody { 
  Ah \_\_ fa 
} 
\

Switching to an alternative melody

More complex variations in setting lyrics to music are possible. The melody to which the lyrics are being set can be changed from within the lyrics by setting the `associatedVoice` property:

\new Voice = "lahlah" { 
  \set Staff.autoBeaming = ##f 
  c'\^4 
} 
\new Voice = "alternative" { 
  \voiceOne 
  \tuplet 3/2 { 
    % show associations clearly. 
    \override NoteColumn.force-hshift = #-3 
    f8 f g 
  } 
} 
\voiceTwo 
  f8.[ g16] 
\oneVoice 
} >> 
a8( b) c 
\new Lyrics \lyricsto "lahlah" { 
  Ju -- ras -- sic Park 
} 
\new Lyrics \lyricsto "lahlah" { 
  % Tricky: need to set `associatedVoice` 
  % one syllable too soon! 
  \set associatedVoice = "alternative" % applies to "ran" 
  Ty -- 
  ran -- 
  no -- 
  \set associatedVoice = "lahlah" % applies to "rus" 
  sau -- rus Rex 
} >>
Chapter 2: Specialist notation

The text for the first stanza is set to the melody called ‘lahlah’ in the usual way, but the second stanza is set initially to the lahaulh context and is then switched to the alternative melody for the syllables ‘ran’ to ‘sau’ by the lines:

\set associatedVoice = "alternative" % applies to "ran"
Ty --
ran --
no --
\set associatedVoice = "lahlah" % applies to "rus"
sau -- rus Rex

Here, alternative is the name of the Voice context containing the triplet.

Note the placement of the \set associatedVoice command – it appears to be one syllable too early, but this is correct.

☛ ✟

Note: The \set associatedVoice command must be placed one syllable before the one at which the switch to the new voice is to occur. In other words, changing the associated Voice happens one syllable later than expected. This is for technical reasons, and it is not a bug.

✠ ✡

Printing stanzas at the end

Sometimes it is appropriate to have one stanza set to the music, and the rest added in verse form at the end of the piece. This can be accomplished by adding the extra verses into a \markup section outside of the main score block. Notice that there are several different ways to force linebreaks when using \markup. For inputting a whole string you may use \string-lines with manually inserted \n or automatic line breaks as entered or \wordwrap-string. If inner formatting code is used a combination of \line and \column is recommended.

\markup \column \string-lines
"Verse 2. \n Everywhere that Mary went \n The lamb was sure to go."

\score {<<
\new Voice = "one" \{ \melody \\
\new Lyrics \lyricsto "one" \text \\
>>
}

\markup \column \string-lines
"Verse 2. \n Everywhere that Mary went \n The lamb was sure to go."
Verse 3.
All the children laughed and played,
To see a lamb at school."

Verse 4.
And so the teacher turned it out,
But still it lingered near.

Verse 5.
Mary took it home again,
It was against the rule."

Verse 2.
Everywhere that Mary went
The lamb was sure to go.

Verse 3.
All the children laughed and played,
To see a lamb at school.

Verse 4.
And so the teacher turned it out,
But still it lingered near.

Verse 5.
Mary took it home again,
It was against the rule.

Printing stanzas at the end in multiple columns
When a piece of music has many verses, they are often printed in multiple columns across the page. An outdented verse number often introduces each verse. The following example shows how to produce such output in LilyPond.

\set stanza = "1." This is verse one.
It has two lines.

<<
\new Voice = "one" { \melody }
\new Lyrics \lyricsto "one" \text
>>
\layout { }
}

\markup {
  \fill-line {
    % moves the column off the left margin;
    % can be removed if space on the page is tight
    \hspace #0.1
    \column {
      \line { \bold "2." }
        \column {
          "This is verse two."
          "It has two lines."
        }
    }
    % adds vertical spacing between verses
    \combine \null \vspace #0.1
    \line { \bold "3." }
      \column {
        "This is verse three."
        "It has two lines."
      }
    }
  }
  % adds horizontal spacing between columns
  \hspace #0.1
  \column {
    \line { \bold "4." }
      \column {
        "This is verse four."
        "It has two lines."
      }
    }
    % adds vertical spacing between verses
    \combine \null \vspace #0.1
    \line { \bold "5." }
      \column {
        "This is verse five."
        "It has two lines."
      }
    }
  }
  % gives some extra space on the right margin;
  % can be removed if page space is tight
  \hspace #0.1
}
}
Chapter 2: Specialist notation

2.1.4 Songs

References for songs

Songs are usually written on three staves with the melody for the singer on the top staff and two staves of piano accompaniment at the bottom. The lyrics of the first stanza are printed immediately underneath the top staff. If there are just a small number of further stanzas these can be printed immediately under the first one, but if there are more stanzas than can be easily accommodated there the second and subsequent stanzas are printed after the music as stand-alone text.

All the notational elements needed to write songs are fully described elsewhere:

- For constructing the staff layout, see Section 1.6.1 [Displaying staves], page 214.
- For writing piano music, see Section 2.2 [Keyboard and other multi-staff instruments], page 375.
- For writing the lyrics to a melody line, see Section 2.1.1 [Common notation for vocal music], page 311.
- For placing the lyrics, see [Placing lyrics vertically], page 325.
- For entering stanzas, see Section 2.1.3 [Stanzas], page 343.
- Songs are frequently printed with the chording indicated by chord names above the staves. This is described in Section 2.7.2 [Displaying chords], page 470.
- To print fret diagrams of the chords for guitar accompaniment or accompaniment by other fretted instruments, see “Fret diagram markups” in Section 2.4.1 [Common notation for fretted strings], page 391.

Notation Reference: Section 2.1.1 [Common notation for vocal music], page 311, Section 2.7.2 [Displaying chords], page 470, Section 1.6.1 [Displaying staves], page 214, Section 2.2 [Keyboard and other multi-staff instruments], page 375, [Placing lyrics vertically], page 325, Section 2.1.3 [Stanzas], page 343.

Snippets: Section “Vocal music” in Snippets.

Lead sheets

Lead sheets may be printed by combining vocal parts and ‘chord mode’; this syntax is explained in Section 2.7 [Chord notation], page 465.

Selected Snippets
**Simple lead sheet**

When put together, chord names, a melody, and lyrics form a lead sheet:

```
<<
\chords { c2 g:sus4 f e }
\new Staff \relative c'' {
  a4 e c8 e r4
  b2 c4( d)
}
\addlyrics { One day this shall be free _ _ _ }
>>
```

![Chord Names and Lyrics]

Notation Reference: Section 2.7 [Chord notation], page 465.

2.1.5 Choral

This section discusses notation issues that relate most directly to choral music. This includes anthems, part songs, oratorio, etc.

**References for choral**

Choral music is usually notated on two, three or four staves within a ChoirStaff group. Accompaniment, if required, is placed beneath in a PianoStaff group, which is usually reduced in size for rehearsal of *a cappella* choral works. The notes for each vocal part are placed in a Voice context, with each staff being given either a single vocal part (i.e., one Voice) or a pair of vocal parts (i.e., two Voices).

Words are placed in Lyrics contexts, either underneath each corresponding music staff, or one above and one below the music staff if this contains the music for two parts.

Several common topics in choral music are described fully elsewhere:

- An introduction to creating an SATB vocal score can be found in the Learning Manual, see Section “Four-part SATB vocal score” in *Learning Manual*. There is also a built-in template which simplifies the entry of SATB vocal music, see Section “Built-in templates” in *Learning Manual*.
- Several templates suitable for various styles of choral music can also be found in the Learning Manual, see Section “Vocal ensembles templates” in *Learning Manual*.
- For information about ChoirStaff and PianoStaff see [Grouping staves], page 215.
- Shape note heads, as used in Sacred Harp and similar notation, are described in [Shape note heads], page 43.
- When two vocal parts share a staff the stems, ties, slurs, etc., of the higher part will be directed up and those of the lower part down. To do this, use \voiceOne and \voiceTwo. See [Single-staff polyphony], page 195.
- When a vocal part temporarily splits, you should use *Temporary polyphonic passages* (see [Single-staff polyphony], page 195).

**Predefined commands**

\oneVoice, \voiceOne, \voiceTwo.
See also

Notation Reference: Section 5.1.7 [Context layout order], page 672, [Grouping staves], page 215, [Shape note heads], page 43, [Single-staff polyphony], page 195.

Snippets: Section “Vocal music” in Snippets.

Score layouts for choral
Choral music containing four staves, with or without piano accompaniment, is usually laid out with two systems per page. Depending on the page size, achieving this may require changes to several default settings. The following settings should be considered:

- The global staff size can be modified to change the overall size of the elements of the score. See Section 4.2.2 [Setting the staff size], page 610.
- The distances between the systems, the staves and the lyrics can all be adjusted independently. See Section 4.4 [Vertical spacing], page 620.
- The dimensions of the vertical layout variables can be displayed as an aid to adjusting the vertical spacing. This and other possibilities for fitting the music onto fewer pages are described in Section 4.6 [Fitting music onto fewer pages], page 651.
- If the number of systems per page changes from one to two it is customary to indicate this with a system separator mark between the two systems. See [Separating systems], page 221.
- For details of other page formatting properties, see Section 4.1 [Page layout], page 597.

Dynamic markings by default are placed below the staff, but in choral music they are usually placed above the staff in order to avoid the lyrics. The predefined command \dynamicUp does this for the dynamic markings in a single Voice context. If there are many Voice contexts this predefined command would have to be placed in every one. Alternatively its expanded form can be used to place all dynamic markings in the entire score above their respective staves, as shown here:

```latex
\score {
  \new ChoirStaff <<
    \new Staff {
      \new Voice {
        \relative { g'4\f g g g }
      }
    }
    \new Staff {
      \new Voice {
        \relative { d'4 d d\p d }
      }
    }
  >>
  \layout {
    \context {
      \Score
        \override DynamicText.direction = #UP
        \override DynamicLineSpanner.direction = #UP
    }
  }
}
```
Predefined commands
\dynamicUp, \dynamicDown, \dynamicNeutral.

Selected Snippets

Using arpeggioBracket to make divisi more visible
The arpeggioBracket can be used to indicate the division of voices where there are no stems to provide the information. This is often seen in choral music.

\include "english.ly"

\score {
 \relative c' {
  \key a \major 
  \time 2/2
  <<
    \new Voice = "upper"
    <<
      { \voiceOne \arpeggioBracket
         a2( b2
         <b d>\arpeggio
         <cs e>\arpeggio ~
         <cs e>4
       }
      \addlyrics { \lyricmode { A -- men. } }
    >>
    \new Voice = "lower"
    { \voiceTwo
       a1 ~
       a ~
       a4 \bar "."
     }
  }
}
2.1.6 Opera and stage musicals

The music, lyrics and dialogue to opera and stage musicals are usually set out in one or more of the following forms:

- A **Conductors’ Score** containing the full orchestral and vocal parts, together with libretto cues if there are spoken passages.
- **Orchestral Parts** containing the music for the individual instruments of the orchestra or band.
- A **Vocal Score** containing all vocal parts with piano accompaniment. The accompaniment is usually an orchestral reduction, and if so the name of the original orchestral instrument is often indicated. Vocal scores sometimes includes stage directions and libretto cues.
- A **Vocal Book** containing just the vocal parts (no accompaniment), sometimes combined with the libretto.
- A **Libretto** containing the extended passages of spoken dialogue usually found in musicals, together with the words to the sung parts. Stage directions are usually included. LilyPond can be used to typeset libretti but as they contain no music alternative methods may be preferable.

The sections in the LilyPond documentation which cover the topics needed to create scores in the styles commonly found in opera and musicals are indicated in the References below. This is followed by sections covering those techniques which are peculiar to typesetting opera and musical scores.

**References for opera and stage musicals**

In addition to vocal and stage ensembles, most of the following notions may apply to nearly any orchestral and ensemble music:

- A conductors’ score contains many grouped staves and lyrics. Ways of grouping staves is shown in [Grouping staves], page 215. To nest groups of staves see [Nested staff groups], page 219.
- The printing of empty staves in conductors’ scores and vocal scores is often suppressed. To create such a “Frenched score” see [Hiding staves], page 229.
- Writing orchestral parts is covered in Section 1.6.3 [Writing parts], page 234. Other sections in the Specialist notation chapter may be relevant, depending on the orchestration used. Many instruments are transposing instruments, see [Instrument transpositions], page 27.
- If the number of systems per page changes from page to page it is customary to separate the systems with a system separator mark. See [Separating systems], page 221.
- For details of other page formatting properties, see Section 4.1 [Page layout], page 597.

See also

Notation Reference: Section 1.3.3 [Expressive marks as lines], page 155.
• Dialogue cues, stage directions and footnotes can be inserted, see Section 3.3.4 [Creating footnotes], page 551, and Section 1.8 [Text], page 275. Extensive stage directions can also be added with a section of stand-alone markups between two \score blocks, see [Separate text], page 286.

See also

Notation Reference: Section 3.3.4 [Creating footnotes], page 551, [Grouping staves], page 215, [Hiding staves], page 229, [Instrument transpositions], page 27, [Nested staff groups], page 219, Section 4.1 [Page layout], page 597, [Separating systems], page 221, [Transpose], page 11, Section 1.6.3 [Writing parts], page 234, Section 1.8.1 [Writing text], page 275.

Snippets: Section “Vocal music” in Snippets.

Character names

Character names are usually shown to the left of the staff when the staff is dedicated to that character alone:

\score {
  \new Staff {
    \set Staff.vocalName = \markup \smallCaps Kaspar
    \set Staff.shortVocalName = \markup \smallCaps Kas.
    \relative {
      \clef "G_8"
      c'4 c c c
      \break
      c4 c c c
    }
  }
  \new Staff {
    \set Staff.vocalName = \markup \smallCaps Melchior
    \set Staff.shortVocalName = \markup \smallCaps Mel
    \clef "bass"
    \relative {
      a4 a a a
      a4 a a a
    }
  }
}
When two or more characters share a staff the character’s name is usually printed above the staff at the start of every section applying to that character. This can be done with markup. Often a specific font is used for this purpose.

\relative c' {
    \clef "G_8"
    c4 \markup \fontsize #1 \smallCaps Kaspar c c c
    \clef "bass"
    a4 \markup \fontsize #1 \smallCaps Melchior a a a
    \clef "G_8"
    c4 \markup \fontsize #1 \smallCaps Kaspar c c c
}\hspace{6.4cm}\hspace{1.1cm}\hspace{6.4cm}

Alternatively, if there are many character changes, it may be easier to set up variables to hold the definitions for each character so that the switch of characters can be indicated easily and concisely.

kaspar = {
    \clef "G_8"
    \set Staff.shortVocalName = "Kas."
    \set Staff.midiInstrument = "voice oohs"
    <> \markup \smallCaps "Kaspar"
}

melchior = {
    \clef "bass"
    \set Staff.shortVocalName = "Mel."
    \set Staff.midiInstrument = "choir aahs"
    <> \markup \smallCaps "Melchior"
}

\relative c' {
    \kaspar c c c c
    \melchior a a a a
    \kaspar c c c c
}
Musical cues

Musical cues can be inserted in Vocal Scores, Vocal Books and Orchestral Parts to indicate what music in another part immediately precedes an entry. Also, cues are often inserted in the piano reduction in Vocal Scores to indicate what each orchestral instrument is playing. This aids the conductor when a full Conductors’ Score is not available.

The basic mechanism for inserting cues is fully explained in the main text, see [Quoting other voices], page 237, and [Formatting cue notes], page 241. But when many cues have to be inserted, for example, as an aid to a conductor in a vocal score, the instrument name must be positioned carefully just before and close to the start of the cue notes. The following example shows how this is done.

```lilypond-flux
flute = \relative {
   s4 s4 e' g
}
\addQuote "flute" { \flute }

pianoRH = \relative {
   c''4. g8
%
% position name of cue-ing instrument just before the cue notes,
% and above the staff
<>
\markup { \right-align { \tiny "Flute" } }
\cueDuring "flute" #UP { g4 bes4 }
}
pianoLH = \relative { c4 <c' e> e, <g c> }

\score {
   \new PianoStaff <<
      \new Staff {
         \pianoRH
      }
      \new Staff {
         \clef "bass"
         \pianoLH
      }
   >>
}
```

See also

Notation Reference: Section 1.8 [Text], page 275, Section A.12 [Text markup commands], page 754.
If a transposing instrument is being quoted the instrument part should specify its key so the conversion of its cue notes will be done automatically. The example below shows this transposition for a B-flat clarinet. The notes in this example are low on the staff so DOWN is specified in `\cueDuring` (so the stems are down) and the instrument name is positioned below the staff.

```plaintext
clarinet = \relative c' { 
  \transposition bes 
  fis4 d d c 
} 
\addQuote "clarinet" { \clarinet }
```

```plaintext
pianoRH = \relative c'' { 
  \transposition c' 
  % position name of cue-ing instrument below the staff
  \_\markup { \right-align { \tiny "Clar." } } 
  \cueDuring "clarinet" #DOWN { c4. g8 }
  g4 bes4 
} 

pianoLH = \relative { c4 <c' e> e, <g c> }
```

```
\score { << 
  \new PianoStaff <<< 
  \new Staff { 
    \new Voice { 
      \pianoRH 
    } 
  } 
  \new Staff { 
    \clef "bass" 
    \pianoLH 
  } 
  >> 
  >> }
```

From these two examples it is clear that inserting many cues in a Vocal Score would be tedious, and the notes of the piano part would become obscured. However, as the following snippet shows, it is possible to define a music function to reduce the amount of typing and to make the piano notes clearer.

**Selected Snippets**
Adding orchestral cues to a vocal score

This shows one approach to simplify adding many orchestral cues to the piano reduction in a vocal score. The music function \cueWhile takes four arguments: the music from which the cue is to be taken, as defined by \addQuote, the name to be inserted before the cue notes, then either #UP or #DOWN to specify either \voiceOne with the name above the staff or \voiceTwo with the name below the staff, and finally the piano music in parallel with which the cue notes are to appear. The name of the cued instrument is positioned to the left of the cued notes. Many passages can be cued, but they cannot overlap each other in time.

\begin{verbatim}
cueWhile = 
#(define-music-function
  (instrument name dir music)
  (string? string? ly:dir? ly:music?)
#{
  \cueDuring $instrument #dir {
    \once \override TextScript.self-alignment-X = #RIGHT
    \once \override TextScript.direction = $dir
    \markup { \tiny #name } $music
  }
} #}

flute = \relative c'' {
  \transposition c'
  s4 s4 e g
}
\addQuote "flute" { \flute }

clarinet = \relative c' {
  \transposition bes
  fis4 d d c
}
\addQuote "clarinet" { \clarinet }

singer = \relative c'' { c4. g8 g4 bes4 }
words = \lyricmode { here's the lyr -- ics }

pianoRH = \relative c'' {
  \transposition c'
  \cueWhile "clarinet" "Clar." #DOWN { c4. g8 }
  \cueWhile "flute" "Flute" #UP { g4 bes4 }
}

pianoLH = \relative c { c4 <c' e> e, <g c> }

\score {
  <<
    \new Staff {
      \new Voice = "singer" {
        \singer
      }
    }
    \new Lyrics {

\lyricsto "singer"
\words
}
\new PianoStaff <<
\new Staff {
  \new Voice {
    \pianoRH
  }
}
\new Staff {
  \clef "bass"
  \pianoLH
}
>>

Notation Reference: Section 5.4.9 [Aligning objects], page 707, Section 5.4.1 [Direction and placement], page 690, [Formatting cue notes], page 241, [Quoting other voices], page 237, Section 3.4.3 [Using music functions], page 570.

Snippets: Section “Vocal music” in Snippets.

Internals Reference: Section “CueVoice” in Internals Reference.

Known issues and warnings
\cueDuring automatically inserts a CueVoice context and all cue notes are placed in that context. This means it is not possible to have two overlapping sequences of cue notes by this technique. Overlapping sequences could be entered by explicitly declaring separate CueVoice contexts and using \quoteDuring to extract and insert the cue notes.

Spoken music
Such effects as ‘parlato’ or ‘Sprechgesang’ require performers to speak without pitch but still with rhythm; these are notated by cross note heads, as demonstrated in [Special note heads], page 40.

Dialogue over music
Dialogue over music is usually printed over the staves in an italic font, with the start of each phrase keyed in to a particular music moment.
For short interjections a simple markup suffices.

\relative {  
a'4\markup { \smallCaps { Alex - } } \italic { He’s gone } } a a a  
a4 a a\markup { \smallCaps { Bethan - } } \italic { Where? } a  
a4 a a a  
}

\relative {  
a'4\markup { \smallCaps { Alex - } } \italic { He’s gone } } a a a  
a4 a a\markup { \smallCaps { Bethan - } } \italic { Where? } a  
a4 a a a  

ALEX - He’s gone  BETHAN - Where?

For longer phrases it may be necessary to expand the music to make the words fit neatly. There is no provision in LilyPond to do this fully automatically, and some manual intervention to layout the page will be necessary.

For long phrases or for passages with a lot of closely packed dialogue, using a Lyrics context will give better results. The Lyrics context should not be associated with a music Voice; instead each section of dialogue should be given an explicit duration. If there is a gap in the dialogue, the final word should be separated from the rest and the duration split between them so that the underlying music spaces out smoothly.

If the dialogue extends for more than one line it will be necessary to manually insert \breaks and adjust the placing of the dialogue to avoid running into the right margin. The final word of the last measure on a line should also be separated out, as above.

Here is an example illustrating how this might be done.

\score {  
  \new Staff {  
    \new Voice { \music }  
  }  
  \new Lyrics \with {  
    \override LyricText.font-shape = #'italic  
    \override LyricText.self-alignment-X = #LEFT  
  }  
  \dialogue  
  \with {  
    \override LyricText.font-shape = #'italic  
    \override LyricText.self-alignment-X = #LEFT  
  }  
  \music = \relative {  
    \repeat unfold 3 { a'4 a a a }  
  }  
  \dialogue = \lyricmode {  
    \markup {  
      \fontsize #1 \upright \smallCaps Abe:  
      “Say this over measures one and”  
    }  
  
    \break  
  
    \"and this over measure"  
  
    \"three"  
  }  
}
ABE: Say this over measures one and two
\begin{music}
\relative c' {
\stemOff
a' \b c2 |}
\end{music}

and this over measure three
\begin{music}
\relative c' {
\stemOff
a' \b c2 |}
\end{music}

2.1.7 Chants psalms and hymns
The music and words for chants, psalms and hymns usually follow a well-established format in any particular church. Although the formats may differ from church to church the typesetting problems which arise are broadly similar, and are covered in this section.

References for chants and psalms
Typesetting Gregorian chant in various styles of ancient notation is described in Section 2.9 [Ancient notation], page 491.

See also
Notation reference: Section 2.9 [Ancient notation], page 491.
Snippets: Section “Vocal music” in Snippets.

Setting a chant
Modern chant settings use modern notation with varying numbers of elements taken from ancient notation. Some of the elements and methods to consider are shown here.

Chants often use quarter notes without stems to indicate the pitch, with the rhythm being taken from the spoken rhythm of the words.

\begin{music}
\relative c' {
\stemOff
a' \b c2 |}
\end{music}

Chants often omit measure bar lines or use shortened or dotted bar lines to indicate pauses in the music. To set a chant with no musical meter, see [Unmetered music], page 81. To retain all the effects of a time signature but disable automatic measure bar lines, set measureBarType to '('). Without regular bar lines, you might need to take steps to control horizontal spacing; see Section 4.3.1 [Line breaking], page 613.

\begin{music}
\score {
\new StaffGroup <<
\new Staff {
\end{music}
Measure bar lines can also be modified on a staff-by-staff basis; see Section 5.1.4 [Modifying context plug-ins], page 663.

Rests or pauses in chants can be indicated by modified bar lines.

\relative a' {
  a4
  \cadenzaOn
  b c2
  a4 b c2
  \bar "."
  a4 b c2
  \bar ","
  a4 b c2
  \bar ";"
  a4 b c2
  \bar "!"
  a4 b c2
  \bar "||"}
Alternatively, the notation used in Gregorian chant for pauses or rests is sometimes used even though the rest of the notation is modern.

\begin{verbatim}
 divisioMinima = \caesura
 divisioMaior = \{ ~\caesura \shortfermata \}
 divisioMaxima = \{ \caesura \fermata \}
 finalis = \section

\score {
 \relative { g'2 a4 g \divisioMinima g2 a4 g \divisioMaior g2 a4 g \divisioMaxima g2 a4 g \finalis}
 \context {
 \Staff
 \remove Caesura_engraver
 \consists Divisio_engraver
 \EnableGregorianDivisiones
 caesuraType = #'((breath . chantquarterbar))
 measureBarType = #'()
 forbidBreakBetweenBarLines = ##f
 }
}
\end{verbatim}

Chants usually omit the time signature and often omit the clef too.

\begin{verbatim}
\score {
 \new Staff {
 \relative { a'4 b c2 |
 a4 b c2 |
 a4 b c2 |
 }
 }
 \context {
 \Staff
 \remove Time_signature_engraver
 \remove Clef_engraver
 measureBarType = #'()
 forbidBreakBetweenBarLines = ##f
 }
\end{verbatim}
Chants for psalms in the Anglican tradition are usually either single, with 7 bars of music, or double, with two lots of 7 bars. Each group of 7 bars is divided into two halves, corresponding to the two halves of each verse, usually separated by a double bar line. Only whole and half notes are used. The 1st bar in each half always contains a single chord of whole notes. This is the “reciting note”. Chants are usually centered on the page.

SopranoMusic = \relative {g'1 | c2 b | a1 |
a1 | d2 c | c b | c1 |}

AltoMusic = \relative {e'1 | g2 g | f1 |
f1 | f2 e | d d | e1 |}

TenorMusic = \relative {c'1 | c2 c | c1 |
d1 | g,2 g | g g | g1 |}

BassMusic = \relative {c1 | e2 e | f1 |
d1 | b2 c | g' g | c,1 |}

global = {
\time 2/2
\skip 1*3 \section 
\skip 1*4 \fine
}

% Use markup to center the chant on the page
\markup {
\fill-line {
\score { % centered
<< 
\new ChoirStaff << 
\new Staff << 
\global 
\clef "treble"
\new Voice = "Soprano" << 
\voiceOne 
\SopranoMusic 
>>
\new Voice = "Alto" << 
\voiceTwo 

Some other approaches to setting such a chant are shown in the first of the following snippets.

**Selected Snippets**

*Chant or psalms notation*

This form of notation is used for Psalm chant, where verses aren’t always the same length.

\begin{verbatim}
\score {
  \new Staff \with { \remove "Time_signature_engraver" }
  \stemOff = \hide Staff.Stem
  \stemOn   = \undo \stemOff

  \new Staff <<
  \clef "bass"
  \global
  \new Voice = "Tenor" <<
  \voiceOne
  \TenorMusic
  \new Voice = "Bass" <<
  \voiceTwo
  \BassMusic

  \layout {
    \context { \Score
      \override SpacingSpanner.base-shortest-duration = #(ly:make-moment 1/2)
      \fineBarType = "||"
    }
    \context {
      \Staff
      \remove Time_signature_engraver
    }
  } % End score
}
\end{verbatim}
Canticles and other liturgical texts may be set more freely, and may use notational elements from ancient music. Often the words are shown underneath and aligned with the notes. If so, the notes are spaced in accordance with the syllables rather than the notes’ durations.

**Ancient notation template – modern transcription of Gregorian music**

This example demonstrates how to do modern transcription of Gregorian music. Gregorian music has no measure, no stems; it uses only half and quarter note heads, and special marks, indicating rests of different length.

```latex
\include "gregorian.ly"

chant = \relative c' {
  \set Score.timing = ##f
  f4 a2 \divisioMinima
  g4 b a2 \divisioMaior
  g4( f) f( g) a2 \finalis
}

verba = \lyricmode {
  Lo -- rem ip -- sum do -- lor sit a -- met
}

\score {
  \new GregorianTranscriptionStaff <<
    \new GregorianTranscriptionVoice = "melody" \chant
    \new GregorianTranscriptionLyrics = "one" \lyricsto melody \verba
  >>
}

Lorem ipsum dolor sit amet

Notation Reference: Section 2.9 [Ancient notation], page 491, [Bar lines], page 106, Section 5.1.4 [Modifying context plug-ins], page 663, Section 2.9.4 [Typesetting Gregorian chant], page 501, [Unmetered music], page 81, Section 5.4.7 [Visibility of objects], page 700.

**Pointing a psalm**

The words to an Anglican psalm are usually printed in separate verses centered underneath the chant.

Single chants (with 7 bars) are repeated for every verse. Double chants (with 14 bars) are repeated for every pair of verses. Marks are inserted in the words to show how they should be fitted to the chant. Each verse is divided into two halves. A colon is usually used to indicate this division. This corresponds to the double bar line in the music. The words before the colon are sung to the first three bars of music; the words after the colon are sung to the last four bars.

Single bar lines (or in some psalters an inverted comma or similar symbol) are inserted between words to indicate where the bar lines in the music fall. In markup mode a single bar line can be entered with the bar check symbol, \|.

```latex
\markup {
  \fill-line {
    \column {
      \left-align {
        \line { O come let us sing | unto the | Lord : let }
        \line { us heartily rejoice in the | strength of | our }
        \line { sal- | -vation. }
      }
    }
  }
}
```

O come let us sing | unto the | Lord : let
us heartily rejoice in the | strength of | our
sal- | -vation.

Other symbols may require glyphs from the fetaMusic fonts. For details, see Section 1.8.3 [Fonts], page 303.

```latex
\text{tick} = \markup {
  \raise #1 \fontsize #-5 \musicglyph "scripts.rvarcomma"
}
```

```latex
\markup {
  \fill-line {
    \column {
      \left-align {
        \line { O come let us sing \text{tick} unto the \text{tick} Lord : let }
        \line { us heartily rejoice in the \text{tick} strength of \text{tick} our }
        \line { sal \text{tick} vation. }
      }
    }
  }
}
```
O come let us sing 'unto the 'Lord: let us heartily rejoice in the 'strength of 'our sal'vation.

Where there is one whole note in a bar all the words corresponding to that bar are recited on that one note in speech rhythm. Where there are two notes in a bar there will usually be only one or two corresponding syllables. If there are more that two syllables a dot is usually inserted to indicate where the change in note occurs.

\begin{verbatim}
dot = \markup {
  \raise #0.7 \musicglyph "dots.dot"
}
tick = \markup {
  \raise #1 \fontsize #-5 \musicglyph "scripts.rvarcomma"
}
\markup {
  \fill-line {
    \column {
      \left-align {
        \line {
          O come let us sing \tick unto \dot the \tick Lord : let
        }
        \line {
          us heartily rejoice in the \tick strength of \tick our
        }
        \line { sal \tick vation. }
      }
    }
  }
}
\end{verbatim}

O come let us sing 'unto the 'Lord: let us heartily rejoice in the 'strength of 'our sal'vation.

In some psalters an asterisk is used to indicate a break in a recited section instead of a comma, and stressed or slightly lengthened syllables are indicated in bold text.

\begin{verbatim}
dot = \markup {
  \raise #0.7 \musicglyph "dots.dot"
}
tick = \markup {
  \raise #1 \fontsize #-5 \musicglyph "scripts.rvarcomma"
}
\markup {
  \fill-line {
    \column {
      \left-align {
        \line { Today if ye will hear his voice * }
        \line {
          \concat { \bold hard en }
          | not your | hearts : as in the pro-
        }
        \line { vocation * and as in the \bold day of tempt- | }
      }
    }
  }
}
\end{verbatim}
Today if ye will hear his voice *
   harden | not your | hearts : as in the provocation * and as in the day of temptation |
tick | in the | wilderness.

In other psalters an accent is placed over the syllable to indicate stress.

\line \ { -ation | in the | wilderness. } 
\} 
\} 
\}

\[ \text{O come let us \text{sing} | unto the | Lord : let us heartily rejoice in the | strength of | our salvation.} \]

The use of markup to center text, and arrange lines in columns is described in Section 1.8.2 [Formatting text], page 287.

Most of these elements are shown in one or other of the two verses in the template, see Section “Psalms” in Learning Manual.

**See also**

Notation Reference: Section 1.8.3 [Fonts], page 303, Section 1.8.2 [Formatting text], page 287.
Phrase bar lines in hymn tunes

The \caesura command can be configured to create phrase bar lines that interact well with other automatic bar lines (see [Automatic bar lines], page 114).

In the following examples, the source code for the tune in old-hundredth-example.ly uses \caesura between poetic lines and \fine at the end. There are no \fermata or \bar commands; those symbols appear in the output because of the caesura configuration.

The Boston Handel and Haydn Society Collection of Church Music (1830) has a thick bar after each phrase. For this tune, it also has fermatas over the bar lines:

\layout {
  \context {
    \Score
    caesuraType = #'(\bar-line . ".")
    (scripts . (fermata)))
    fineBarType = ". ."
  }
}
\include "old-hundredth-example.ly"

J.S. James’ Original Sacred Harp (1911) has a thick bar when a line is broken in mid-measure at the end of a phrase.

\layout {
  \context {
    \Score
    caesuraType = #'(underlying-bar-line . ".x-.")
    fineBarType = ". ."
  }
}
\include "old-hundredth-example.ly"
Chapter 2: Specialist notation

Partial measures in hymn tunes

Hymn tunes frequently start and end every line of music with partial measures so that each line of music corresponds exactly with a line of text. This requires a \partial command at the start of the music and a bar line at the end of each line.

**Hymn template**

This code shows one way of setting out a hymn tune when each line starts and ends with a partial measure. It also shows how to add the verses as stand-alone text under the music.

```latex
Timeline = {
  \time 4/4
  \tempo 4=96
  \partial 2
  s2 | s1 | s2 \breathe s2 | s1 | s2 \caesura \break
  s2 | s1 | s2 \breathe s2 | s1 | s2 \fine
}

SopranoMusic = \relative g' {
  g4 g | g g g g | g g g g | g g g g | g2

And the last line of the same

2.1.8 Ancient vocal music

Ancient vocal music is supported, as explained in Section 2.9 [Ancient notation], page 491.

See also
Notation Reference: Section 2.9 [Ancient notation], page 491.

2.2 Keyboard and other multi-staff instruments
This section discusses several aspects of music notation that are unique to keyboard instruments and other instruments notated on many staves, such as harps and vibraphones. For the purposes of this section, this entire group of multi-staff instruments is called “keyboards” for short, even though some of them do not have a keyboard.

2.2.1 Common notation for keyboards

This section discusses notation issues that may arise for most keyboard instruments.

References for keyboards

Keyboard instruments are usually notated with Piano staves. These are two or more normal staves coupled with a brace. The same notation is also used for other keyed instruments. Organ music is normally written with two staves inside a PianoStaff group and a third, normal staff for the pedals.

The staves in keyboard music are largely independent, but sometimes voices can cross between the two staves. This section discusses notation techniques particular to keyboard music.

Several common issues in keyboard music are covered elsewhere:

- Keyboard music usually contains multiple voices and the number of voices may change regularly; this is described in [Collision resolution], page 200.
- Keyboard music can be written in parallel, as described in [Writing music in parallel], page 211.
- Dynamics may be placed in a Dynamics context, between the two Staff contexts to align the dynamic marks on a horizontal line centered between the staves; see [Dynamics], page 140.
- Fingerings are indicated with [Fingering instructions], page 252.
• Organ pedal indications are inserted as articulations, see Section A.15 [List of articulations], page 820.

• Vertical grid lines can be shown with [Grid lines], page 269.

• Keyboard music often contains \textit{Laissez vibrer} ties as well as ties on arpeggios and tremolos, described in [Ties], page 58.

• Placing arpeggios across multiple voices and staves is covered in [Arpeggio], page 160.

• Tremolo marks are described in [Tremolo repeats], page 187.

• Several of the tweaks that can occur in keyboard music are demonstrated in Section “Real music example” in \textit{Learning Manual}.

• Hidden notes can be used to produce ties that cross voices, as shown in Section “Other uses for tweaks” in \textit{Learning Manual}.

See also

Notation Reference: [Grouping staves], page 215, [Instrument names], page 234, [Collision resolution], page 200, [Writing music in parallel], page 211, [Fingering instructions], page 252, Section A.15 [List of articulations], page 820, [Grid lines], page 269, [Ties], page 58, [Arpeggio], page 160, [Tremolo repeats], page 187.

Internals Reference: Section “PianoStaff” in \textit{Internals Reference}.

Snippets: Section “Keyboards” in \textit{Snippets}.

Changing staff manually

Voices can be switched between staves manually, using the command

\begin{verbatim}
\change Staff = staffname
\end{verbatim}

The string \texttt{staffname} is the name of the staff. It switches the current voice from its current staff to the staff called \texttt{staffname}. Typical values for \texttt{staffname} are "up" and "down", or "RH" and "LH".

The staff to which the voice is being switched must exist at the time of the switch. If necessary, staves should be “kept alive”, see Section 5.1.3 [Keeping contexts alive], page 660, or explicitly instantiated, for example by using the empty chord, \(<\), see [Chorded notes], page 189.

\begin{verbatim}
\new PianoStaff <<
\new Staff = "up" {
  \% enforce creation of all contexts at this point of time
  <>
  \change Staff = "down" c2
  \change Staff = "up" c'2
}
\new Staff = "down" {
  \clef bass
  \% keep staff alive
  s1
}
>>
\end{verbatim}
Cross-staff notes are beamed automatically:

\new PianoStaff <<
\new Staff = "up" {
  \<e' c'>8
  \change Staff = "down"
  g8 fis g
  \change Staff = "up"
  \<g'' c''>8
  \change Staff = "down"
  e8 dis e
  \change Staff = "up"
}
\new Staff = "down" {
  \clef bass
  % keep staff alive
  s1
}
>>

If the beaming needs to be tweaked, make any changes to the stem directions first. The beam positions are then measured from the center of the staff that is closest to the beam. For a simple example of beam tweaking, see Section “Fixing overlapping notation” in Learning Manual.

Overlapping notation can result when voices cross staves:

\new PianoStaff <<
\new Staff = "up" {
  \voiceOne
  % Make space for fingering in the cross-staff voice
  \once\override DynamicLineSpanner.staff-padding = #4
  e''2\p\< d''\>
  c''1!
}
\new Staff = "down" <<
{
  \clef bass
  s4. e,8\rest g,2\rest
  c1
} \\ {
  c8\{ g c'
}
The stem and slur overlap the intervening line of dynamics because automatic collision resolution is suspended for beams, slurs and other spanners that connect notes on different staves, as well as for stems and articulations if their placement is affected by a cross-staff spanner. The resulting collisions must be resolved manually, where necessary, using the methods in Section “Fixing overlapping notation” in Learning Manual.

See also

Notation Reference: [Stems], page 265, [Automatic beams], page 91, Section 5.1.3 [Keeping contexts alive], page 660.

Snippets: Section “Keyboards” in Snippets.

Known issues and warnings
Beam collision avoidance does not work for automatic beams that end right before a change in staff. In this case use manual beams.

Changing staff automatically
Voices can be made to switch automatically between the top and the bottom staff. The syntax for this is

\autoChange ...music...

This will create two staves inside the current staff group (usually a PianoStaff), called "up" and "down". The lower staff will be in the bass clef by default. The autoChanger switches on the basis of the pitch (middle C is the turning point), and it looks ahead skipping over rests to switch in advance.

\new PianoStaff { \autoChange { g4 a b c' d'4 r a g } }
It is possible to specify other pitches for the turning point. If the staves are not instantiated explicitly, other clefs may be used.

\[
\text{music} = \{
\begin{align*}
g8 & \ b \ a \ c' \ b8 \ d' \ c'8 \ e' \\
d'8 & \ r \ f' \ g' \ a'2 \\
\end{align*}
\}
\]

\autoChange d' \music
\autoChange b \with \{ \clef soprano \} \music
\autoChange d' \with \{ \clef alto \} \with \{ \clef tenor \} \music

A \relative section that is outside of \autoChange has no effect on the pitches of the music, so if necessary, put \relative inside \autoChange.

If additional control is needed over the individual staves, they can be created manually with the names "up" and "down". The \autoChange command will then switch its voice between the existing staves.

\begin{center}
\textbf{Note:} If staves are created manually, they \textit{must} be named "up" and "down".
\end{center}

For example, staves must be created manually in order to place a key signature in the lower staff:

\begin{verbatim}
\new PianoStaff << \\
\new Staff = "up" \{
\new Voice = "mel1one" \{
\key g \major
\}
\}
\end{verbatim}
Chapter 2: Specialist notation

\autoChange \relative {  
g8 b a c b d c e  
d8 r fis, g a2  
} 
\new Staff = "down" {  
\key g \major  
\clef bass  
} 

See also

Notation Reference: [Changing staff manually], page 377.
Snippets: Section “Keyboards” in Snippets.

Known issues and warnings

The staff switches may not end up in optimal places. For high quality output, staff switches should be specified manually.

Chords will not be split across the staves; they will be assigned to a staff based on the first note named in the chord construct.

Staff-change lines

Whenever a voice switches to another staff, a line connecting the notes can be printed automatically:

\new PianoStaff <<  
\new Staff = "one" {  
\showStaffSwitch  
c'1  
\change Staff = "two"  
b2 a  
}  
\new Staff = "two" {  
\clef bass  
s1*2  
}  

>
A staff-change line between chords connects the chords’ “last notes” as written in the source file; this can be used to quickly adjust the line’s vertical start and end positions.

\new PianoStaff <<
\new Staff = "one" {
  <c' e' g'>1
  \showStaffSwitch
  \change Staff = "two"
  <a c' f>1
  \hideStaffSwitch
  \change Staff = "one"
  <e' g' c'>1
  \showStaffSwitch
  \change Staff = "two"
  <f a c'>1
}
\new Staff = "two" {
  \clef bass
  s1*4
}
>>

![Staff-change line between chords](image)

Predefined commands
\showStaffSwitch, \hideStaffSwitch.

See also
Snippets: Section “Keyboards” in Snippets.
Internals Reference: Section “Note_head_line_engraver” in Internals Reference, Section “VoiceFollower” in Internals Reference.

Selected Snippets

**Cross staff stems**
This snippet shows the use of the \Span_stem_engraver and \crossStaff to connect stems across staves automatically.

The stem length need not be specified, as the variable distance between noteheads and staves is calculated automatically.

\layout {
  \context {
    \PianoStaff
    \Span_stem_engraver
    \crossStaff
  }
}
Indicating cross-staff chords with arpeggio bracket

An arpeggio bracket can indicate that notes on two different staves are to be played with the same hand. In order to do this, the \texttt{PianoStaff} must be set to accept cross-staff arpeggios and the arpeggios must be set to the bracket shape in the \texttt{PianoStaff} context.

(Debussy, \textit{Les collines d’Anacapri}, m. 65)

\begin{verbatim}
\new PianoStaff <<
\new Staff {
  \relative c'4 \key b \major \time 6/8 \fermata \laissezVibrer \bar "||"
}
\new Staff {
  \clef bass \voiceOne \autoBeamOff \crossStaff { <a e cis>2. \arpeggio }
}
\end{verbatim}
2.2.2 Piano

This section discusses notation issues that relate most directly to the piano.

Piano pedals

Pianos generally have three pedals that alter the way sound is produced: sustain, sostenuto (sos.), and una corda (U.C.). Sustain pedals are also found on vibraphones and celestas.

```
\relative { c''4\sustainOn d e g
   <c, f a>1\sustainOff
c4\sostenutoOn e g c,
   <bes d f>1\sostenutoOff
c4\unaCorda d e g
   <d fis a>1\treCorde
}
```

There are three styles of pedal indications: text, bracket, and mixed. The sustain pedal and the una corda pedal use the text style by default while the sostenuto pedal uses mixed by default.

```
\relative { c''4\sustainOn g c2\sustainOff
\set Staff.pedalSustainStyle = #'mixed
c4\sustainOn g c d
d\sustainOff\sustainOn g, c2\sustainOff
\set Staff.pedalSustainStyle = #'bracket
c4\sustainOn g c d
d\sustainOff\sustainOn g, c2
\bar "|."}
```
The placement of the pedal commands matches the physical movement of the sustain pedal during piano performance. Pedalling to the final bar line is indicated by omitting the final pedal off command.

Pedal indications may be placed in a Dynamics context, which aligns them on a horizontal line.

See also
Notation Reference: [Ties], page 58.
Snippets: Section “Keyboards” in Snippets.

2.2.3 Accordion
This section discusses notation that is unique to the accordion.

Discant symbols
Accordions are often built with more than one set of reeds that may be in unison with, an octave above, or an octave below the written pitch. Each accordion maker has different names for the shifts that select the various reed combinations, such as oboe, musette, or bandonion, so a system of symbols has come into use to simplify the performance instructions.

A complete list of all available accordion registers can be found in Section A.12.7 [Accordion registers], page 803.

Selected Snippets

**Accordion register symbols**
Accordion register symbols are available as \markup as well as as standalone music events (as register changes tend to occur between actual music events). Bass registers are not overly standardized. The available commands can be found in 'Discant symbols’ in the Notation Reference.

2.2.4 Harp
This section discusses notation issues that are unique to the harp.

References for harps
Some common characteristics of harp music are covered elsewhere:

- The glissando is the most characteristic harp technique, [Glissando], page 156.
- A bisbigliando is written as a tremolo [Tremolo repeats], page 187.
- Natural harmonics are covered under [Harmonics], page 389.
- For directional arpeggios and non-arpeggios, see [Arpeggio], page 160.

See also
Notation Reference: [Tremolo repeats], page 187, [Glissando], page 156, [Arpeggio], page 160, [Harmonics], page 389.
Harp pedals

Harps have seven strings per octave that may be sounded at the natural, flattened, or sharpened pitch. In lever harps, each string is adjusted individually, but in pedal harps every string with the same pitch name is controlled by a single pedal. From the player’s left to right, the pedals are D, C, and B on the left and E, F, G, and A on the right. The position of the pedals may be indicated with text marks:

\textLengthOn
\cis''1\_\markup { \concat \vcenter { [D\flat C\sharp B|E\sharp F\sharp G A\flat] } }
\c''!1\_\markup { \concat \vcenter { [C\natural] } }

or pedal diagrams:

\textLengthOn
\cis''1\_\markup { \\harp-pedal "^v-|--v-^" }
\c''!1\_\markup { \\harp-pedal "^o--|--v-^" }

The \harp-pedal command accepts a string of characters, where ^ is the highest pedal position (flattened pitch), - is the middle pedal position (natural pitch), v is the lowest pedal position (sharpened pitch), and | is the divider. A prefixed o will circle the following pedal symbol.

See also

Notation Reference: [Text scripts], page 277, Section A.12.6 [Instrument-specific markup], page 799.

2.3 Unfretted string instruments
This section provides information and references which are helpful when writing for unfretted string instruments, principally orchestral strings.

2.3.1 Common notation for unfretted strings

There is little specialist notation for unfretted string instruments. The music is notated on a single staff, and usually only a single voice is required. Two voices might be required for some double-stopped or divisi passages.

References for unfretted strings

Most of the notation which is useful for orchestral strings and other bowed instruments is covered elsewhere:

- Textual indications such as “pizz.” and “arco” are added as simple text – see [Text scripts], page 277.
- Fingerings, including the thumb indication, are described in [Fingering instructions], page 252.
- String numbers may be added (generally in roman numbers for bowed instruments) as explained in [String number indications], page 392.
- Double stopping is normally indicated by writing a chord, see [Chorded notes], page 189. Directives for playing chords may be added, see [Arpeggio], page 160.
- Templates for string quartets can be found in Section “String quartet templates” in Learning Manual. Others are shown in the snippets.

See also

Notation Reference: [Text scripts], page 277, [Fingering instructions], page 252, [Chorded notes], page 189, [Arpeggio], page 160.

Snippets: Section “Unfretted strings” in Snippets.

Bowing indications

Bowing indications are created as articulations, which are described in [Articulations and ornamentations], page 137.

The bowing commands, \upbow and \downbow, are used with slurs as follows:

\relative { c'4(\downbow d) e(\upbow f) }
Roman numerals can be used for string numbers (rather than the default circled Arabic numbers), as explained in [String number indications], page 392.

Alternatively, string indications may be printed using markup commands; articulation scripts may also indicate open strings.

\a'a\4 \open \\
\romanStringNumbers
\a'a\2
\a'a'2\markup { \small "sul A" }

Predefined commands
\downbow, \upbow, \open, \romanStringNumbers.

See also
Notation Reference: [Articulations and ornamentations], page 137, [String number indications], page 392, [Slurs], page 150.

Harmonics

Natural harmonics

Natural harmonics can be notated in several ways. A diamond-shaped note head generally means to touch the string where you would stop the note if it were not a diamond.

\relative d' {  
   d4 e4. 
   \harmonicsOn
   d8 e e 
   d4 e4. 
   \harmonicsOff
   d8 e e 
}

Alternatively a normal note head is shown at the pitch to be sounded together with a small circle to indicate it should be played as a harmonic:

\d''2\flageolet d'' \flageolet

Artificial harmonics
Artificial harmonics are notated with two notes, one with a normal note head indicating the stopped position and one with an open diamond note head to indicate the harmonic position. Artificial harmonics indicated with \harmonic do not show the dots. The context property harmonicDots should be set if dots are required.

\relative e' {
    \set harmonicDots = ##t
    <e a\harmonic>2. <c g'\harmonic>4
    <e a\harmonic>2. <c g'\harmonic>4
}

See also
Notation Reference: [Special note heads], page 40, [References for unfretted strings], page 388.

Snap (Bartók) pizzicato
A \textit{snap pizzicato} (also known as “Bartok pizz”) is a type of pizzicato where the string is deliberately plucked upwards (rather than sideways) such that it hits the fingerboard.

\relative {
    c'4\snappizzicato
    <c’ e g>4\snappizzicato
    <c’ e g>4\snappizzicato
    <c, e g>4\snappizzicato
}

2.4 Fretted string instruments
This section discusses several aspects of music notation that are unique to fretted string instruments.

2.4.1 Common notation for fretted strings
This section discusses common notation that is unique to fretted string instruments.

References for fretted strings
Music for fretted string instruments is normally notated on a single staff, either in traditional music notation or in tablature. Sometimes the two types are combined, and it is especially common in popular music to use chord diagrams above a staff of traditional notation. The guitar and the banjo are transposing instruments, sounding an octave lower than written. Scores for these instruments should use the "treble_8" clef (or \transposition{c} to get correct MIDI output). Some other elements pertinent to fretted string instruments are covered elsewhere:

- Fingerings are indicated as shown in [Fingering instructions], page 252.
- Instructions for *Laissez vibrer* ties as well as ties on arpeggios and tremolos can be found in [Ties], page 58.
- Instructions for handling multiple voices can be found in [Collision resolution], page 200.
- Instructions for indicating harmonics can be found in [Harmonics], page 389.

See also
Notation Reference: [Fingering instructions], page 252, [Ties], page 58, [Collision resolution], page 200, [Instrument names], page 234, [Writing music in parallel], page 211, [Arpeggio], page 160, Section A.15 [List of articulations], page 820, [Clef], page 17, [Instrument transpositions], page 27.
String number indications

The string on which a note should be played may be indicated by appending \number to a note.

\clef "treble_8"
\c4\5 e\4 g\2\3
<\c\5 e\4 g\3>1

When fingerings and string indications are used together, their placement can be controlled by the order in which the two items appear in the code only if they appear inside of an explicit chord: applied to whole chords or single notes outside of chords, fingerings are placed using a different mechanism.

\clef "treble_8"
g\4\3-0
g-0\3
<g\3-0>
<g-0\3>

String numbers may also, as is customary with unfretted strings, be printed in Roman numerals and placed below the staff rather than above.

\clef "treble_8"
c’2\2
a\3
\romanStringNumbers
c’2
\set stringNumber Orientations = #'(down)
a\3
\arabicStringNumbers
g1\4

Most behaviors of string number indications (namely, the StringNumber object), including their placement, may be set in the same way as fingerings: see [Fingering instructions], page 252.

Predefined commands
\arabicStringNumbers, \romanStringNumbers.
Default tablatures

Music for plucked string instruments is frequently notated using a finger/touch notation or tablature. In contrast to traditional notation pitches are not denoted with note heads, but by numbers (or letter-like symbols in historical intavolatura). The staff lines in tablature indicate the string on which the note is to be played, and a number placed on a staff line indicated the fret at which the corresponding string is to be pressed. Notes that are to be played simultaneously are vertically aligned.

By default, string 1 is the highest string, and corresponds to the top line on the TabStaff. The tuning of the TabStaff strings defaults to the standard guitar tuning (with 6 strings). The notes are printed as tablature, by using TabStaff and TabVoice contexts. A calligraphic tablature clef is added automatically.

```
\new TabStaff \relative { 
a,8 a' <c e> a
d,8 a' <d f> a
}
```

Default tablatures do not contain any symbols for tone duration nor any other musical symbols such as expressive marks, for example.

```
symbols = { 
  \time 3/4
  c4-."Allegro" d( e)
f4-\f g a\fermata
  \mark \default
  c8_.\<\( c16 c\sim 2\! 
c'2.\prall\)
}

\score { 
  <<
    \new Staff \{ \clef "G_8" \symbols \}
    \new TabStaff \{ \symbols \}
  >>
}
```
If all musical symbols used in traditional notation should also show up in tablature one has to apply the command `\tabFullNotation` in a `TabStaff`-context. Please bear in mind that half notes are double-stemmed in tablature in order to distinguish them from quarter notes.

```
symbols = {
    \time 3/4
    c4-."Allegro" d( e)
    f4-\f g a\fermata
    \mark \default
    c8_.\<\( c16 c- 2\)
    c'2.\prall\}
}
```

\score {
    \new TabStaff {
        \tabFullNotation
        \symbols
    }
}

By default pitches are assigned to the lowest playing position on the fretboard (first position). Open strings are automatically preferred. If you would like a certain pitch to be played on a specific string you can add a string number indication to the pitch name. If you don't want to have string number indications appear in traditional notation, you can override the respective stencil. Usually it will be more comfortable to define the playing position by using the value of `minimumFret`. The default value for `minimumFret` is 0.

Even when `minimumFret` is set, open strings are used whenever possible. This behavior can be changed by setting `restrainOpenStrings` to `#t`.

```
\layout { \omit Voice.StringNumber }
\new StaffGroup <<
    \new Staff \relative {
        \clef "treble_8"
        \time 2/4
        c16 d e f g4
        c,16\5 d\5 e\4 f\4 g4\4
        c,16 d e f g4
    }
```
Chord constructs can be repeated by the chord repetition symbol \( \texttt{q} \). In combination with tabulatures, its behavior of removing string and finger numbers alongside with other events is cumbersome, so you’ll want to run

\[ \texttt{\chordRepeats \#'(string-number-event fingering-event)} \]

explicitly on music expressions in tabulature using [Chord repetition], page 191. This particular command is so common that it is available as \texttt{\tabChordRepeats}.

\begin{verbatim}
guitar = \relative { r8 <gis-2 cis-3 b-0> - q4 q8 - q4 q8 - 8 q4 } \end{verbatim}

\begin{verbatim}
\new StaffGroup << \new Staff { \clef "treble_8" \guitar } \new TabStaff { \tabChordRepeats \guitar } \end{verbatim}

Ties over a line break are parenthesized by default. The same holds for the second alternative of a repeat.

\begin{verbatim}
ties = \relative { \repeat volta 2 { e'2. \f4\- 2 \g2\- } } \end{verbatim}
The command \hideSplitTiedTabNotes cancels the behavior of engraving fret numbers in parentheses:

\begin{verbatim}
\ties = \relative {
  \repeat volta 2 { e'2. f4 ~ 2 g2 ~ 2 \repeatTie c.2. }
}
\break
\bar "| ."
\end{verbatim}
Harmonic indications can be added to tablature notation as sounding pitches:

\layout { \omit Voice.StringNumber } 
firstHarmonic = { 
d'4 \harmonic
g'4 \harmonic
b'2 \harmonic
Note that the command \harmonic must always be attached to single notes (possibly inside of a chord) instead of whole chords. It only makes sense for open-string harmonics in the 12th fret. All other harmonics should be calculated by LilyPond. This can be achieved by indicating the fret where a finger of the fretting hand should touch a string.

```
fretHarmonics = {  
  \harmonicByFret #5 d16\4  
  \harmonicByFret #4 d16\4  
  \harmonicByFret #3 d8\4  
  \harmonicByFret #5 <g\3 b\2>2.
}
```

Alternatively, harmonics can be computed by defining the ratio of string lengths above and below the harmonic fingering.

```
ratioHarmonics = {  
  \harmonicByRatio #1/2 <g\3 b\2 e\1>4
}
```
String bendings can be added to tablature notation. A bending is introduced by appending `\-` to the note or chord to be bent; it terminates automatically at the next note or chord. Available are the following styles: the default prints a curve with an arrow head up or down, 'hold a dashed horizontal line, 'pre-bend a vertical line with an arrow head, and 'pre-bend-hold a vertical line with an arrow head continued by a dashed line.

```
bend-styles = {
    <>"default"
    f'4\- g'4\- f'2

    <>"hold"
    \grace f'4\- g'1\bendHold \- g'1

    <>"pre-bend"
    \grace f'4\preBend \- g'1\bendHold \- g'1

    <>"pre-bend-hold"
    \grace f'4\preBendHold \- g'1\bendHold \- g'1\- f'

    \bar "|.
}
```

```tex
\score {
    \new StaffGroup {
        \new Staff {
            \override TextScript.font-size = -2
            \clef "G_8"
            \bend-styles
        }
    }
    \new TabStaff { \ratioHarmonics }
}
```
Open strings are usually not bent. To have them bent as well set the property `bend-me` to `#t`. To exclude other notes from being bent set it to `#f`.

\begin{verbatim}
mus = {
<>"default"
<a b f'>4
<ais b fis'>
<a b f'>2

<>"bend open strings"
<a \tweak bend-me ##t b f'>4
<ais \tweak bend-me ##t bis fis'>
<a b f'>2

<>"exclude other strings"
<g \tweak bend-me ##f b\3 d'>4
<a e'2 >
<g \tweak bend-me ##f b\3 d'>2

\bar "| ."
}
\end{verbatim}
For consecutive bendings the starting bend may need to have an appropriate setting for details.successive-level. For convenience there is the function bendStartLevel, taking an integer.

\texttt{printNext = -\texttt{\textbackslash tweak details.target-visibility ##t \texttt{\textbackslash etc}}}

\texttt{mus = \{}
\texttt{c'4\textbackslash \textbackslash 3 \textbackslash cis'3 \textbackslash d'2\textbackslash 3}
\texttt{\textbackslash grace bes4\textbackslash \textbackslash 3\textbackslash preBendHold \textbackslash bendStartLevel 2 \textbackslash printNext \textbackslash}
\texttt{d'4\textbackslash \textbackslash bendHold \textbackslash d'2\textbackslash 3 \textbackslash des'4\textbackslash 3 \textbackslash c'1\textbackslash 3}
\texttt{\textbar "|."}
\texttt{\}}

\texttt{\textbackslash score \{}
\texttt{\new StaffGroup}
\texttt{<<}
\texttt{\new Staff \{}
\texttt{\textbackslash override TextScript.font-size = -2}
\texttt{\textbackslash clef "G_8"}
\texttt{\mus}
\texttt{\}}
\texttt{\new TabStaff \mus}
Per default the BendSpanner ends at the following note or chord even if it is tied to the starting note or chord. A single NoteColumn may be skipped by using \skipNC. A group of NoteColumns can be skipped by using \skipNCs at the beginning and \endSkipNCs at the end.

\begin{verbatim}
bends-with-ties-and-skips = {
  a'4-\^ \skipNC a'4- \skipNC a'4 b'4
  a'4- a'4-\^ \skipNC a'4 b'4
  a'4- a'4- a'4-\^ b'4
  c'2\^ d'- \bendHold \^ \skipNC d'- d'\^ c'
  \grace { c'8-\preBendHold \^ } \skipNCs
d'2- d'2- \endSkipNCs d'\^ c'2
}\end{verbatim}

\begin{verbatim}
\score {
  \new StaffGroup <<
    \new Staff {
      \clef "G_8"
      \bends-with-ties-and-skips
    }
    \new TabVoice \bends-with-ties-and-skips >>

  \layout {
    \context {
      \Voice
      \omit StringNumber
    }
    \context {
      \TabStaff
      minimumFret = #3
    }\end{verbatim}
Predefined commands
\skipNCs, \skipNC, \endSkipNCs.

Selected Snippets

Stem and beam behavior in tablature
The direction of stems is controlled the same way in tablature as in traditional notation. Beams can be made horizontal, as shown in this example.

\new TabStaff {
  \relative c {
    \tabFullNotation
    g16 b d g b d g b 
    \stemDown
    \override Beam.concaveness = #10000
    g,,16 b d g b d g b
  }
}

Polyphony in tablature
Polyphony is created the same way in a TabStaff as in a regular staff.

upper = \relative c' {
  \time 12/8
  \key e \minor
  \voiceOne
  r4. r8 e, fis g16 b g e e' b c b a g fis e
}

lower = \relative c {

Slides in tablature

Slides can be typeset in both Staff and TabStaff contexts:

```latex
\begin{verbatim}
slides = {
  c'8\3(glissando d'8\3)
  c'8\3(glissando d'8\3)
  \hideNotes
  \grace{ g16\glissando }
  \unHideNotes
  c'4\3
  \afterGrace d'4\3\glissando {
    \stemDown \hideNotes
g16 }
  \unHideNotes
}

\score{
  \context{
    \Score
    \override Glissando.minimum-length = #4
    \override Glissando.springs-and-rods = 
      \ly:spanner::set-spacing-rods
    \override Glissando.thickness = #2
    \omit StringNumber

    % or:
    %\override StringNumber.stencil = ##f
  }
}
\end{verbatim}
```

\[\begin{array}{cccccc}
\text{A} & (4) & (7) & (7) & (5) & (5) \\
\text{F} & (5) & (7) & (5) & (7) & 2 \quad (9) \\
\end{array}\]
**Chord glissando in tablature**

Slides for chords are indicated by default in both Staff and TabStaff.

String numbers are necessary for TabStaff because automatic string calculations are different for chords and for single notes.

\[
\text{myMusic} = \relative c' \{ \\
\text{<c e g>1 } \text{\texttt{\glissando} <f a c>
\}}
\]

\[
\text{\score \{ \\
<< \\
\text{\new Staff \{ \\
\text{\clef "treble_8"} \\
\text{\myMusic} \\
\}} \\
\text{\new TabStaff \myMusic} \\
>> \\
\}}
\]

\[
\text{\score \{ \\
<< \\
\text{\new Staff \{ \\
\text{\clef "treble_8"} \\
\text{\myMusic} \\
\}} \\
\text{\new TabStaff \with \{ \text{\override \texttt{Glissando.style} = #'none \} \{ \\
\text{\myMusic} \\
\}} \\
>> \\
\}}
\]

\[
\text{\begin{figure}[h]
\centering
\includegraphics[width=0.8\textwidth]{chord_glissando.png}
\caption{Chord glissando in tablature}
\end{figure}}
\]

**Hammer on and pull off**

Hammer-on and pull-off can be obtained using slurs.

\[
\text{\new TabStaff \{ \\
\relative c' \{ \\
\text{d4( e\2) } \\
\text{a( g) }
\}}
\]
Hammer on and pull off using voices

The arc of hammer-on and pull-off is upwards in voices one and three and downwards in voices two and four:

\new TabStaff {
    \relative c' {
        << { \voiceOne g2 ( a ) }
        \ \ { \voiceTwo a, ( b ) }
        >> \oneVoice
    }
}

Hammer on and pull off using chords

When using hammer-on or pull-off with chorded notes, only a single arc is drawn. However “double arcs” are possible by setting the \doubleSlurs property to \tildet.

\new TabStaff {
    \relative c' {
        % chord hammer-on and pull-off
        \set doubleSlurs = \tildet
        <g' b>8 ( <a c> <g b> )
    }
}

Known issues and warnings

Chords are not handled in a special way, and hence the automatic string selector may easily select the same string for two notes in a chord.

In order to handle \partCombine, a TabStaff must use specially-created voices:

melodia = \partCombine { e4 g g g } { e4 e e e }
Guitar special effects are limited to harmonics and slides.

**Custom tablatures**

LilyPond tablature automatically calculates the fret for a note based on the string to which the note is assigned. In order to do this, the tuning of the strings must be specified. The tuning of the strings is given in the `stringTunings` property.

LilyPond comes with predefined string tunings for banjo, mandolin, guitar, bass guitar, ukulele, violin, viola, cello, and double bass. LilyPond automatically sets the correct transposition for predefined tunings. The following example is for bass guitar, which sounds an octave lower than written.

```lilypond
<<
\new TabStaff <<
\new TabVoice = "one" s1
\new TabVoice = "two" s1
\new TabVoice = "shared" s1
\new TabVoice = "solo" s1
{ \melodia }
>>
>>

\new TabStaff \with {
  \omit StringNumber
} {
  \clef "bass_8"
  \relative {
    c,4 d e f
  }
}
\new TabStaff \with {
  \stringTunings = #bass-tuning
} {
  \relative {
    c,4 d e f
  }
}
>>
```

The default string tuning is `guitar-tuning`, which is the standard EADGBE tuning. Some other predefined tunings are `guitar-open-g-tuning`, `mandolin-tuning` and `banjo-open-g-tuning`. The predefined string tunings are found in `ly/string-tunings-init.ly`.

```lilypond
<<
\new Voice \with {
  \omit StringNumber
} {
  \clef "bass_8"
  \relative {
    c,4 d e f
  }
}
\new TabStaff \with {
  \stringTunings = #bass-tuning
} {
  \relative {
    c,4 d e f
  }
}
>>
```
Any desired string tuning can be created. The `\stringTuning` function can be used to define a string tuning which can be used to set `\stringTunings` for the current context.

Its argument is a chord construct defining the pitches of each string in the tuning. The chord construct must be in absolute octave mode, see [Absolute octave entry], page 1. The string with the highest number (generally the lowest string) must come first in the chord. For example, we can define a string tuning for a four-string instrument with pitches of `a''`, `d''`, `g'`, and `c'`:

```plaintext
mynotes = {
  c'4 e' g' c'' |
  e''4 g'' b'' c'''
}
<<
  \new Staff {
    \clef treble
    \mynotes
  }
  \new TabStaff {
    \set Staff.stringTunings = \stringTuning <c' g' d'' a''>
    \mynotes
  }
>>
```

The `\stringTunings` property is also used by `FretBoards` to calculate automatic fret diagrams.

String tunings are used as part of the hash key for predefined fret diagrams (see [Predefined fret diagrams], page 424).

The previous example could also be written as follows:

```plaintext
custom-tuning = \stringTuning <c' g' d'' a''>

mynotes = {
  c'4 e' g' c'' |
  e''4 g'' b'' c'''
}
<<
  \new Staff {
    \clef treble
    \mynotes
  }
  \new TabStaff {
    \set TabStaff.stringTunings = #custom-tuning
    \mynotes
  }
>>
```
Internally, a string tuning is a Scheme list of string pitches, one for each string, ordered by string number from 1 to N, where string 1 is at the top of the tablature staff and string N is at the bottom. This ordinarily results in ordering from highest pitch to lowest pitch, but some instruments (e.g., ukulele) do not have strings ordered by pitch.

A string pitch in a string tuning list is a LilyPond pitch object. Pitch objects are created with the Scheme function \ly:make-pitch (see Section “Scheme functions” in Internals Reference).

\stringTuning creates such an object from chord input.

LilyPond automatically calculates the number of lines in the TabStaff and the number of strings in an automatically calculated FretBoard as the number of elements in stringTunings.

To let all TabStaff contexts use the same custom tuning by default, you can use

\layout {
  \context {
    \TabStaff
      stringTunings = \stringTuning <c' g' d'' a''>
  }
}

A modern tab clef can also be used.

\new TabStaff {
  \clef modern-tab
  <a, e a>1
  \break
  \clef tab
  <a, e a>1
}

The modern tab clef supports tablatures from 4 to 7 strings.

TabStaff may support microtones like quarter tones, which can be played using bendings. supportNonIntegerFret = ##t needs to be set in Score context. However, microtones are not supported in FretBoards.

\layout {
  \context {
    \Score
      supportNonIntegerFret = ##t
  }
}
custom-tuning = \stringTuning <e, a, d ges beh eeh'>

mus = \relative {
    eeses'4
    eeseh
    ees
    eeh
    e
    eihih
    eis
    eisihih
    eisis
}

<< 
\new Staff << \clef "G_8" \mus >>
\new TabStaff \with { stringTunings = \custom-tuning } \mus
>>

Known issues and warnings
Automatic tablature calculations do not work properly in most cases for instruments where string pitches do not vary monotonically with string number, such as ukuleles.

Fret diagram markups
Fret diagrams can be added to music as a markup to the desired note. The markup contains information about the desired fret diagram. There are three different fret diagram markup interfaces: standard, terse, and verbose. The three interfaces produce equivalent markups, but have varying amounts of information in the markup string. Details about the syntax of the different markup strings used to define fret diagrams are found at Section A.12.6 [Instrument-specific markup], page 799.

The standard fret diagram markup string indicates the string number and the fret number for each dot to be placed on the string. In addition, open and unplayed (muted) strings can be indicated.
<< 
\new ChordNames {

Barre indications can be added to the diagram from the fret diagram markup string.

```
\new ChordNames {
  \chordmode {
    f1 g
  }
}
```

```
\new Staff {
  \clef "treble_8"
  <f, c f a c' f'>1^\markup {
    \fret-diagram "c:6-1-1;6-1;5-3;4-3;3-2;2-1;1-1;"
  }
  <g, d g b d' g'>1^\markup {
    \fret-diagram "c:6-1-3;6-3;5-5;4-5;3-4;2-3;1-3;"
  }
}
```

The size of the fret diagram, and the number of frets in the diagram can be changed in the fret diagram markup string.

```
\new ChordNames {
  \chordmode {
    c1 d:m
  }
}
```
The number of strings in a fret diagram can be changed to accommodate different instruments such as banjos and ukuleles with the fret diagram markup string.

Fingering indications can be added, and the location of fingering labels can be controlled by the fret diagram markup string.
\new Staff {
  \clef "treble_8"
  <c e g c' e'>1\markup {
    \fret-diagram "f:1;6-x;5-3-3;4-2-2;3-o;2-1-1;1-o;"
  }
  <d a d' f'>1\markup {
    \fret-diagram "f:2;6-x;5-x;4-o;3-2-2;2-3-3;1-1-1;"
  }
}

\fret-diagram \timesig.C44
C  Dm
X X O
X O O

Dot radius and dot position can be controlled with the fret diagram markup string.

\new ChordNames {
  \chordmode {
    c1 d:m
  }
}

\new Staff {
  \clef "treble_8"
  <c e g c' e'>1\markup {
    \fret-diagram "d:0.35;6-x;5-3;4-2;3-o;2-1;1-o;"
  }
  <d a d' f'>1\markup {
    \fret-diagram "p:0.2;6-x;5-x;4-o;3-2;2-3-3;1-1;"
  }
}

Fret-diagrams may be printed left-handed
\markup
\center-column {
  "C"
  "(left-handed)"
  \override #(fret-diagram-details . ((handedness . ,LEFT)))
  \fret-diagram "6-x;5-3-3;4-2-2;3-o;2-1;1-o;"
C
(left-handed)

The \fret-diagram-terse markup string omits string numbers; the string number is implied by the presence of semicolons. There is one semicolon for each string in the diagram. The first semicolon corresponds to the highest string number and the last semicolon corresponds to the first string. Mute strings, open strings, and fret numbers can be indicated.

<<
\new ChordNames {
  \chordmode {
    c1 d:m
  }
}
\new Staff {
  \clef "treble_8"
  \markup {
    \fret-diagram-terse "x;3;2;o;1;o;"
  }
  \markup {
    \fret-diagram-terse "x;x;o;2;3;1;"
  }
}
>>

Barre indicators can be included in the \fret-diagram-terse markup string.

<<
\new ChordNames {
  \chordmode {
    f1 g
  }
}
\new Staff {
  \clef "treble_8"
  \markup {
    \fret-diagram-terse "1-;(3;3;2;1;1-);"
  }
  \markup {
    \fret-diagram-terse "3-;(5;5;4;3;3-);"
  }
}
>>
Fingering indications can be included in the `\fret-diagram-terse` markup string.

```latex
\new ChordNames {
  \chordmode {
    c1 d:m
  }
}\new Staff {
  \override Voice.TextScript.fret-diagram-details.finger-code = '#'below-string
  \clef "treble_8"
  <c e g c' e'>1\markup {
    \fret-diagram-terse "x;3-3;2-2;0;1-1;0;"
  }
  <d a d' f'>1\markup {
    \fret-diagram-terse "x;x;0;2-2;3-3;1-1;"
  }
}\new ChordNames {
  \chordmode {
    c1 d:m
  }
}\new Staff {
  \clef "treble_8"
  <c e g c' e'>1\markup {
    \fret-diagram-terse "x;3-3;2-2;0;1-1;0;"
  }
  <d a d' f'>1\markup {
    \fret-diagram-terse "x;x;0;2-2;3-3;1-1;"
  }
}\new ChordNames {
  \chordmode {
    c1 d:m
  }
}\new Staff {
  \clef "treble_8"
  <c e g c' e'>1\markup {
    \fret-diagram-terse "x;3-3;2-2;0;1-1;0;"
  }
  <d a d' f'>1\markup {
    \fret-diagram-terse "x;x;0;2-2;3-3;1-1;"
  }
}\fret-diagram-terse #'
```

Other fret diagram properties must be adjusted using `\override` when using the `\fret-diagram-terse` markup.

Only one indication per string can be included in a `\fret-diagram-terse` markup. To have multiple indications per string use a fret diagram or `\fret-diagram-verbose` markup.

The `\fret-diagram-verbose` markup string is in the format of a Scheme list. Each element of the list indicates an item to be placed on the fret diagram.

```latex
\new ChordNames {
  \chordmode {
    c1 d:m
  }
}\new Staff {
  \clef "treble_8"
  <c e g c' e'>1\markup {
    \fret-diagram-terse "x;3-3;2-2;0;1-1;0;"
  }
  <d a d' f'>1\markup {
    \fret-diagram-terse "x;x;0;2-2;3-3;1-1;"
  }
}\new ChordNames {
  \chordmode {
    c1 d:m
  }
}\new Staff {
  \clef "treble_8"
  <c e g c' e'>1\markup {
    \fret-diagram-terse "x;3-3;2-2;0;1-1;0;"
  }
  <d a d' f'>1\markup {
    \fret-diagram-terse "x;x;0;2-2;3-3;1-1;"
  }
}\new ChordNames {
  \chordmode {
    c1 d:m
  }
}\new Staff {
  \clef "treble_8"
  <c e g c' e'>1\markup {
    \fret-diagram-terse "x;3-3;2-2;0;1-1;0;"
  }
  <d a d' f'>1\markup {
    \fret-diagram-terse "x;x;0;2-2;3-3;1-1;"
  }
}\new ChordNames {
  \chordmode {
    c1 d:m
  }
}\new Staff {
  \clef "treble_8"
  <c e g c' e'>1\markup {
    \fret-diagram-terse "x;3-3;2-2;0;1-1;0;"
  }
  <d a d' f'>1\markup {
    \fret-diagram-terse "x;x;0;2-2;3-3;1-1;"
  }
}\fret-diagram-verbose #'
(mute 6)
```
Fingering indications and barres can be included in a \fret-diagram-verbose markup string. Unique to the \fret-diagram-verbose interface is a capo indication that can be placed on the fret diagram. The capo indication is a thick bar that covers all strings. The fret with the capo will be the lowest fret in the fret diagram.

Fingering indication dots can be colored as well as parenthesized; the parenthesis’s color can also be altered independently.

Markups can be placed into the dots as well.

<<
\new ChordNames { \chordmode { f1 g c c b } }
\new Staff { \clef "treble_8" \override Voice.TextScript.fret-diagram-details.finger-code = #'below-string <f, c f a c' f'>1\markup { \fret-diagram-verbose #'( place-fret 6 1) (place-fret 5 3) (place-fret 4 3) (place-fret 3 2) (place-fret 2 1) (place-fret 1 1) } } >>
(barre 6 1 1)
)
}
<g, b, d g b g'>1`\markup {
\fret-diagram-verbose #'( (place-fret 6 3 2) (place-fret 5 2 1) (open 4) (open 3) (open 2) (place-fret 1 3 3) )
}
<c g c' e' g'>1`\markup {
\fret-diagram-verbose #'( (capo 3) (mute 6) (place-fret 4 5 1) (place-fret 3 5 2) (place-fret 2 5 3) )
}
\override Voice.TextScript.size = 1.4  
<c g c' e' g'>1`\markup {
\fret-diagram-verbose #'( (place-fret 6 3 1 red parenthesized default-paren-color) (place-fret 5 3 1 inverted) (place-fret 4 5 2 blue parenthesized) (place-fret 3 5 2 blue) (place-fret 2 5 4 blue) (place-fret 1 3 1 inverted) )
}
\override Voice.TextScript.size = 1.5  
<b, fis b dis' fis'>1`\markup
\override #'(fret-diagram-details . ((finger-code . in-dot))) \fret-diagram-verbose #'( (place-fret 5 2 1) (place-fret 4 4 "fis" red) (place-fret 3 4 "b" red) (place-fret 2 4 ,#\{ \markup \concat { \vcenter "d" \fontsize #-5 \musicglyph "accidentals.sharp"} #} red) (place-fret 1 2 1) )
}
All other fret diagram properties must be adjusted using `\override` when using the `\fret-diagram-verbose` markup.

The graphical layout of a fret diagram can be customized according to user preference through the properties of the `fret-diagram-interface`. Details are found at Section “fret-diagram-interface” in *Internals Reference*. For a fret diagram markup, the interface properties belong to `Voice.TextScript`.

**Selected Snippets**

**Changing fret orientations**

Fret diagrams can be oriented in three ways. By default the top string or fret in the different orientations will be aligned.

```
\include "predefined-guitar-fretboards.ly"

<<
\chords {
  c1
  c1
  c1
}
\new FretBoards {
  \chordmode {
    c1
    \override FretBoard.fret-diagram-details.orientation = #'landscape
c1
    \override FretBoard.fret-diagram-details.orientation = #'opposing-landscape
c1
  }
}
\new Voice {
  c'1
  c'1
  c'
}
>>
```
Customizing markup fret diagrams

Fret diagram properties can be set through \fret-diagram-details. For markup fret diagrams, overrides can be applied to the \Voice.TextScript object or directly to the markup.

```
<\chords { c1 | c | c | d }
\new Voice = "mel" {
\textLengthOn
% Set global properties of fret diagram
\override TextScript.size = #'1.2
\override TextScript.fret-diagram-details.finger-code = #'in-dot
\override TextScript.fret-diagram-details.dot-color = #'white

%%% C major for guitar, no barre, using defaults
%%% terse style
% size 1.0
% roman fret label, finger labels below string, straight barre
\markup { \fret-diagram-terse "x;3-3;2-2;o;1-1;o;" }

%%% C major for guitar, barred on third fret
%%% size 1.0
%%% roman fret label, finger labels below string, straight barre
\markup {
% standard size
\override #(size . 1.0) {
\override \fret-diagram-details . ( (number-type . roman-lower) (finger-code . in-dot) (barre-type . straight)) {
\fret-diagram-verbose #(mute 6) (place-fret 5 3 1) (place-fret 4 5 2) (place-fret 3 5 3) (place-fret 2 5 4) (place-fret 1 3 1) (barre 5 1 3))
}
}
}

%%% C major for guitar, barred on third fret
%%% size 1.0
%%% landscape orientation, arabic numbers, M for mute string
%%% no barre, fret label down or left, small mute label font
\markup {

```
\override #'(fret-diagram-details . (  
  (finger-code . below-string)  
  (number-type . arabic)  
  (label-dir . -1)  
  (mute-string . "M")  
  (orientation . landscape)  
  (barre-type . none)  
  (xo-font-magnification . 0.4)  
  (xo-padding . 0.3))) { 
  \fret-diagram-verbose #'((mute 6) 
    (place-fret 5 3 1) 
    (place-fret 4 5 2) 
    (place-fret 3 5 3) 
    (place-fret 2 5 4) 
    (place-fret 1 3 1) 
    (barre 5 1 3)) 
} 

%% simple D chord  
% terse style  
% larger dots, centered dots, fewer frets  
% label below string  
d'\text{"\markup { 
\override #'(fret-diagram-details . (  
  (finger-code . below-string)  
  (dot-radius . 0.35)  
  (dot-position . 0.5)  
  (fret-count . 3))) { 
  \fret-diagram-terse "x;x;o;2-1;3-2;2-3;" 
} 
} 
} 

\include "predefined-guitar-fretboards.ly"

See also
Notation Reference: Section A.12.6 [Instrument-specific markup], page 799.
Snippets: Section “Fretted strings” in Snippets.
Internals Reference: Section “fret-diagram-interface” in Internals Reference.

Predefined fret diagrams
Fret diagrams can be displayed using the FretBoards context. By default, the FretBoards context will display fret diagrams that are stored in a lookup table: 
 \include "predefined-guitar-fretboards.ly"
The default predefined fret diagrams are contained in the file `predefined-guitar-fretboards.ly`. Fret diagrams are stored based on the pitches of a chord and the value of `stringTunings` that is currently in use. `predefined-guitar-fretboards.ly` contains predefined fret diagrams only for guitar-tuning. Predefined fret diagrams can be added for other instruments or other tunings by following the examples found in `predefined-guitar-fretboards.ly`.

Fret diagrams for the ukulele are contained in the file `predefined-ukulele-fretboards.ly`.

\begin{verbatim}
myChords = \chordmode { a1 a:m a:aug }
\new ChordNames { \myChords }
\new FretBoards { \set Staff.stringTunings = #ukulele-tuning \myChords }
\end{verbatim}

Fret diagrams for the mandolin are contained in the file `predefined-mandolin-fretboards.ly`.

\begin{verbatim}
myChords = \chordmode { c1 c:m7.5- c:aug }
\new ChordNames { \myChords }
\new FretBoards { \set Staff.stringTunings = #mandolin-tuning \myChords }
\end{verbatim}
Chord pitches can be entered either as simultaneous music or using chord mode (see [Chord mode overview], page 465).

\include "predefined-guitar-fretboards.ly"
\new FretBoards {
  \chordmode { c1 }
  <c' e' g'>1
}

It is common that both chord names and fret diagrams are displayed together. This is achieved by putting a ChordNames context in parallel with a FretBoards context and giving both contexts the same music.

\include "predefined-guitar-fretboards.ly"
mychords = \chordmode {
  c1 f g
}

<<
  \new ChordNames {
    \mychords
  }
  \new FretBoards {
    \mychords
  }
>>

Predefined fret diagrams are transposable, as long as a diagram for the transposed chord is stored in the fret diagram table.

\include "predefined-guitar-fretboards.ly"
mychords = \chordmode {
  c1 f g
}

mychordlist = {
  \mychords
  \transpose c e { \mychords }
}

<<
  \new ChordNames {
    \mychords
  }
}
The predefined fret diagram table for guitar contains eight chords (major, minor, augmented, diminished, dominant seventh, major seventh, minor seventh, dominant ninth) for each of 17 keys.

The predefined fret diagram table for ukulele contains these chords plus an additional three chords (major sixth, suspended second, and suspended fourth).

See Section A.4 [Predefined fretboard diagrams], page 722, for a complete list of the predefined fret diagrams. If there is no entry in the table for a chord, the FretBoards engraver calculates a fret diagram using the automatic fret diagram functionality, see [Automatic fret diagrams], page 435.

Fret diagrams can be added to the fret diagram table. To add a diagram, you must specify the hash table for the diagram, the chord for the diagram, the tuning to be used, and a definition for the diagram. Normally, the hash table will be \texttt{default-fret-table}. The diagram definition can be either a \texttt{fret-diagram-terse} definition string or a \texttt{fret-diagram-verbose} marking list.

\include "predefined-guitar-fretboards.ly"
\storePredefinedDiagram #default-fret-table

\chordmode { c:maj9 }
#guitar-tuning
"x;3-2;o;o;o;o;"

\mychords = \chordmode {
    c1 c:maj9
}

\include "predefined-guitar-fretboards.ly"
\storePredefinedDiagram #default-fret-table
\chordmode { c:maj9 }
#guitar-tuning
"x;3-2;o;o;o;o;"
Different fret diagrams for the same chord name can be stored using different octaves of pitches. The different octave should be at least two octaves above or below the default octave, because the octaves above and below the default octave are used for transposing fretboards.

In addition to fret diagrams, LilyPond stores an internal list of chord shapes. The chord shapes are fret diagrams that can be shifted along the neck to different positions to provide different chords. Chord shapes can be added to the internal list and then used to define predefined fret diagrams. Because they can be moved to various positions on the neck, chord shapes will normally not contain any open strings. Like fret diagrams, chord shapes can be entered as either \fret-diagram-terse strings or \fret-diagram-verbose marking lists.

\include "predefined-guitar-fretboards.ly"

% Add a new chord shape
\addChordShape #'powerf #guitar-tuning "1-1;3-3;3-4;x;x;x;"

% add some new chords based on the power chord shape

\storePredefinedDiagram #default-fret-table
  \chordmode \{ f'' \}
  #guitar-tuning
  #(chord-shape 'powerf guitar-tuning)
\storePredefinedDiagram #default-fret-table
  \chordmode \{ g'' \}
  #guitar-tuning
  #(offset-fret 2
    (chord-shape 'powerf guitar-tuning))

mychords = \chordmode \{
  f1 f'' g g''
\}

<<
  \new ChordNames {\mychords}
  \mychords
\}
  \new FretBoards {\mychords}
  \mychords
>>

The graphical layout of a fret diagram can be customized according to user preference through the properties of the fret-diagram-interface. Details are found at Section “fret-diagram-interface” in Internals Reference. For a predefined fret diagram, the interface properties belong to FretBoards.FretBoard.

Selected Snippets

Customizing fretboard fret diagrams

Fret diagram properties can be set through 'fret-diagram-details. For FretBoard fret diagrams, overrides are applied to the FretBoards.FretBoard object. Like Voice, FretBoards is a bottom level context, therefore can be omitted in property overrides.

\include "predefined-guitar-fretboards.ly"
\storePredefinedDiagram #default-fret-table \chordmode \{ c' \}
  #guitar-tuning
  #"x;1-1-(;3-2;3-3;3-4;1-1-);"

% shorthand
oo = #(define-music-function
  (grob-path value)
Defining predefined fretboards for other instruments

Predefined fret diagrams can be added for new instruments in addition to the standards used for guitar. This file shows how this is done by defining a new string-tuning and a few predefined fretboards for the Venezuelan *cuatro*.

This file also shows how fingerings can be included in the chords used as reference points for the chord lookup, and displayed in the fret diagram and the TabStaff, but not the music.
These fretboards are not transposable because they contain string information. This is planned to be corrected in the future.

```plaintext
\% add FretBoards for the Cuatro
\% Note: This section could be put into a separate file
\% predefined-cuatro-fretboards.ly

% Make a new fretboard table as a copy of default-fret-table
#(define custom-fretboard-table-two
   (make-fretboard-table default-fret-table))

---

**Fretboards alternate tables**

Alternate fretboard tables can be created. These would be used in order to have alternate fretboards for a given chord.

In order to use an alternate fretboard table, the table must first be created. Fretboards are then added to the table.

The created fretboard table can be blank, or it can be copied from an existing table.

The table to be used in displaying predefined fretboards is selected by the property \predefinedDiagramTable.

\include "predefined-guitar-fretboards.ly"
% Add a chord to custom-fretboard-table-one
\storePredefinedDiagram #custom-fretboard-table-one
\chordmode {c}

}
>>
}
>>
Automatic fret diagrams

Fret diagrams can be automatically created from entered notes using the FretBoards context. If no predefined diagram is available for the entered notes in the active stringTunings, this context calculates strings and frets that can be used to play the notes.

\new ChordNames {
\chordmode {
  f1 g
}
}\new FretBoards {
  <f, c f a c' f'>1
  <g, b, d g b g'>1
}\new Staff {
  \clef "treble_8"
  <f, c f a c' f'>1
  <g, b, d g b g'>1
}\n
As no predefined diagrams are loaded by default, automatic calculation of fret diagrams is the default behavior. Once default diagrams are loaded, automatic calculation can be enabled and disabled with predefined commands:
Sometimes the fretboard calculator will be unable to find an acceptable diagram. This can often be remedied by manually assigning a note to a string. In many cases, only one note need be manually placed on a string; the rest of the notes will then be placed appropriately by the FretBoards context.

Fingerings can be added to FretBoard fret diagrams.
The minimum fret to be used in calculating strings and frets for the \FretBoards context can be set with the \minimumFret property.

\new \ChordNames { \chordmode { d1:m d:m } } \new \FretBoards { <d a d' f'>1 \set \FretBoards.minimumFret = #5 <d a d' f'>1 } \new \Staff { \clef "treble_8" <d a d' f'>1 <d a d' f'>1 } \predefinedFretboardsOff, \predefinedFretboardsOn.

See also

Notation Reference: [Custom tablatures], page 411.
Snippets: Section “Fretted strings” in Snippets.
Internals Reference: Section “fret-diagram-interface” in *Internals Reference*.

**Known issues and warnings**

Automatic fretboard calculations do not work properly for instruments with non-monotonic tunings.

**Right-hand fingerings**

Right-hand fingerings *p-i-m-a* must be entered using `\rightHandFinger` followed by a number.

*Note:* If the number is entered in Scheme notation, remember to append a space before following it with a closing > or similar.

\clef "treble_8"
c4\rightHandFinger #1
e\rightHandFinger #2
g\rightHandFinger #3
c'\rightHandFinger #4
<c\rightHandFinger #1 e\rightHandFinger #2
g\rightHandFinger #3 c'\rightHandFinger #4 >1

For convenience, `\rightHandFinger` may be abbreviated to something shorter, for example `\RH`, by adding the appropriate definition at the source file’s top level:

\RH = \rightHandFinger \etc

Most behaviors of right-hand fingerings (namely, the StrokeFinger object) may be set in the same way as ordinary fingerings: see [*Fingering instructions*], page 252.

**Selected Snippets**

**Placement of right-hand fingerings**

It is possible to exercise greater control over the placement of right-hand fingerings by setting a specific property, as demonstrated in the following example.

#(define RH rightHandFinger)

\relative c {
  \clef "treble_8"

  \set strokeFingerOrientations = #'(up down)
  <c\RH #1 e\RH #2 g\RH #3 c\RH #4 >4

  \set strokeFingerOrientations = #'(up right down)
  <c\RH #1 e\RH #2 g\RH #3 c\RH #4 >4

  \set strokeFingerOrientations = #'(left)
  <c\RH #1 e\RH #2 g\RH #3 c\RH #4 >2

  \set strokeFingerOrientations = #'(right)
  c\RH #1
Fingerings, string indications, and right-hand fingerings

This example combines left-hand fingering, string indications, and right-hand fingering.

```lilypond
#(define RH rightHandFinger)
\relative c {
  \clef "treble_8"
  \mbox{\RH\#1}\text{4} \mbox{\RH\#2}\text{4} \mbox{\RH\#3}\text{4} \mbox{\RH\#4}\text{4}
}
```

Internals Reference: Section “StrokeFinger” in Internals Reference.

2.4.2 Guitar

Most of the notational issues associated with guitar music are covered sufficiently in the general fretted strings section, but there are a few more worth covering here. Occasionally users want to create songbook-type documents having only lyrics with chord indications above them. Since LilyPond is a music typesetter, it is not recommended for documents that have no music notation in them. A better alternative is a word processor, text editor, or, for experienced users, a typesetter like GuitarTeX.

Indicating position and barring

This example demonstrates how to include guitar position and barring indications.

```lilypond
\relative {
  \clef "treble_8"
  b,16 d g b e
  \textSpannerDown
  \override TextSpanner.bound-details.left.text = "XII"
  g16\startTextSpan
  b16 e g e b \stopTextSpan
  e16 b g d
}
```
See also

Notation Reference: [Text spanners], page 279.

Snippets: Section “Fretted strings” in Snippets, Section “Expressive marks” in Snippets.

Indicating harmonics and dampened notes

Special note heads can be used to indicate dampened notes or harmonics. Harmonics are normally further explained with a text markup.

\relative {
  \clef "treble_8"
  \override NoteHead.style = #'harmonic-mixed
d'8\markup { \italic \fontsize #-2 "harm. 12" } <g b>4
}

\relative {
  \clef "treble_8"
  \override NoteHead.style = #'harmonic-mixed
d'8\markup { \italic \fontsize #-2 "harm. 12" } <g b>4
}

\relative {
  \clef "treble_8"
  \override NoteHead.style = #'harmonic-mixed
d'8\markup { \italic \fontsize #-2 "harm. 12" } <g b>4
}

\relative {
  \clef "treble_8"
  \override NoteHead.style = #'harmonic-mixed
d'8\markup { \italic \fontsize #-2 "harm. 12" } <g b>4
}

Dampened notes (also called dead notes) are supported within normal and tablature staves:

music = \relative {
  < a\3 \deadNote c\2 a\1 >4
  < b\3 \deadNote d\2 b\1 >
  < c\3 \deadNote e\2 c\1 >
  \deadNotesOn
  \tuplet 3/2 { g8 b e }
  \deadNotesOff
  < a,\3 c\2 e\1 >1
}

\new StaffGroup <<
  \new Staff {
    \clef "treble_8"
    \music
  }
  \new TabStaff {
    \music
  }
>>
Another playing technique (especially used on electric guitars) is called palm mute. The string is hereby partly muted by the palm of the striking hand (hence the name). LilyPond supports the notation of palm mute-style notes by changing the note head to a triangle shape.

\new Voice { % Warning: explicit Voice instantiation is 
% required to have palmMuteOff work properly 
% when palmMuteOn comes at the beginning of 
% the piece. 
\relative c, { 
\clef "G_8"
\palmMuteOn
\markup { \musicglyph "noteheads.s2do" = palm mute } 
< e b' e > e 
\palmMuteOff
\palmMute { e e e } e e e | 
< \palmMute e b' e >8 \palmMute { e e e } < \palmMute e b' e >2 
} 
}\palmMute

See also
Snippets: Section “Fretted strings” in Snippets.
Notation Reference: [Special note heads], page 40, Section A.9 [Note head styles], page 749.

Indicating power chords
Power chords and their symbols can be engraved in chord mode or as chord constructs. As an exception, the fifth is specified in these chord names, whereas it is usually left out in other chords (e.g., major or minor triads).

ChordsAndSymbols = { 
\chordmode { 
e,,1:5
a,,:5.8
\set TabStaff.restrainOpenStrings = ##t
\set minimumFret = #8
\relative c { 
\palmMute
}}
\set minimumFret = #2
\set restrainOpenStrings = ##f
\new ChordNames {
  \ChordsAndSymbols
}
\new Staff {
  \clef "treble_8"
  \ChordsAndSymbols
}
\new TabStaff {
  \ChordsAndSymbols
}

See also
Music Glossary: Section “power chord” in Music Glossary.
Notation Reference: [Extended and altered chords], page 467, [Printing chord names], page 470.
Snippets: Section “Fretted strings” in Snippets.

2.4.3 Banjo

Banjo tablatures
LilyPond has basic support for the five-string banjo. When making tablatures for five-string banjo, use the banjo tablature format function to get correct fret numbers for the fifth string:

\set minimumFret = #2
\set restrainOpenStrings = ##f
\new ChordNames {
  \ChordsAndSymbols
}
\new Staff {
  \clef "treble_8"
  \ChordsAndSymbols
}
\new TabStaff {
  \ChordsAndSymbols
}

\new Staff \with { \omit StringNumber }
{ \clef "treble_8" \music }

\score {
  \new ChordNames {
    \ChordsAndSymbols
  }
  \new Staff {
    \clef "treble_8"
    \ChordsAndSymbols
  }
  \new TabStaff {
    \ChordsAndSymbols
  }

  >>
}

See also
Music Glossary: Section “power chord” in Music Glossary.
Notation Reference: [Extended and altered chords], page 467, [Printing chord names], page 470.
Snippets: Section “Fretted strings” in Snippets.
A number of common tunings for the five-string banjo are predefined: \textit{banjo-open-g-tuning} (gDGBD), \textit{banjo-c-tuning} (gCGBD), \textit{banjo-modal-tuning} (gDGCD), \textit{banjo-open-d-tuning} (aDF#AD), \textit{banjo-open-dm-tuning} (aDFAD), \textit{banjo-double-c-tuning} (gCGCD) and \textit{banjo-double-d-tuning} (aDGDE).

These may be converted to four-string tunings using the \texttt{four-string-banjo} function:
\begin{lstlisting}[language=ly][\set TabStaff.stringTunings = #(four-string-banjo banjo-c-tuning)]
\end{lstlisting}

See also

Installed Files: \texttt{ly/string-tunings-init.ly}.

Snippets: Section “Fretted strings” in \textit{Snippets}.

\subsection*{2.4.4 Lute}

\textbf{Lute tablatures}

LilyPond supports tablature for lute.

To get additional bass strings use \texttt{additionalBassStrings}, where the pitches of those strings are set. They will be printed below lowest line as: a, /a, //a, ///a, 4, 5, etc.

\texttt{fret-letter-tablature-format} for \texttt{tablatureFormat} should be used, probably also \texttt{fretLabels} for further customizing.

\begin{verbatim}
m = { f'4 d' a f d a, g, fis, e, d, c, \bar "|." } \score {
  <<
    \new Staff { \clef bass \cadenzaOn \m }
    \new TabStaff \m
  >>

  \context { \Score
    tablatureFormat = #fret-letter-tablature-format
  }

  \context { \TabStaff
    stringTunings = \stringTuning <a, d f a d' f'>
    additionalBassStrings = \stringTuning <c, d, e, fis, g,>
    fretLabels = #'("a" "b" "c" "d" "e" °f" "g" "h" "i" "k")
  }
}
\end{verbatim}
Known issues and warnings

Using FretBoards with additional Bass Strings is not supported and will yield unsatisfying results.

2.5 Percussion

2.5.1 Common notation for percussion

Rhythmic music is primarily used for percussion and drum notation, but it can also be used to show the rhythms of melodies.

References for percussion

- Some percussion may be notated on a rhythmic staff; this is discussed in [Showing melody rhythms], page 88, and [Instantiating new staves], page 214.
- MIDI output is discussed in a separate section; please see Section 3.6 [Creating MIDI output], page 582.

See also

Notation Reference: [Showing melody rhythms], page 88, [Instantiating new staves], page 214, Section 3.6 [Creating MIDI output], page 582.

Snippets: Section “Percussion” in Snippets.

Basic percussion notation

Percussion notes may be entered in `\drummode` mode, which is similar to the standard mode for entering notes. The simplest way to enter percussion notes is to use the `\drums` command, which creates the correct context and entry mode for percussion:

```
\drums {
   hihat4 hh bassdrum bd
}
```

This is shorthand for:

```
\new DrumStaff \drummode {
   hihat4 hh bassdrum bd
}
```
Each piece of percussion has a full name and an abbreviated name, and both can be used in input files. The full list of percussion note names may be found in Section A.17 [Percussion notes], page 822.

Note that the normal notation of pitches (such as cis4) in a DrumStaff context will cause an error message. Percussion clefs are added automatically to a DrumStaff context but they can also be set explicitly. Other clefs may be used as well.

\drums {
\clef percussion
bd4 4 4 4
\clef treble
hh4 4 4 4
}

There are a few issues concerning MIDI support for percussion instruments; for details please see Section 3.6 [Creating MIDI output], page 582.

See also
Notation Reference: Section 3.6 [Creating MIDI output], page 582, Section A.17 [Percussion notes], page 822.

Installed Files: ly/drumpitch-init.ly
Snippets: Section “Percussion” in Snippets.

Drum rolls
Drum rolls are indicated with three slashes across the stem. For quarter notes or longer the three slashes are shown explicitly, eighth notes are shown with two slashes (the beam being the third), and drum rolls shorter than eighths have one stem slash to supplement the beams. This is achieved with the tremolo notation, as described in [Tremolo repeats], page 187.

\drums {
\time 2/4
sn16 8 16 8 8:32 ~
8 8 4:32 ~
4 8 16 16
4 r4
}

Sticking can be indicated by placing a markup for "R" or "L" above or below notes, as discussed in Section 5.4.1 [Direction and placement], page 690. The staff-padding property may be overridden to achieve a pleasing baseline.

\drums {
\repeat unfold 2 {
\stemUp
sn16^"L" 16^"R" 16^"L" 16^"R" 16^"L" 16^"R" 16^"L" 16^"R"
sn16_"L" 16_"R" 16_"L" 16_"R" 16_"L" 16_"R" 16_"R"
}
See also

Notation Reference: [Tremolo repeats], page 187.
Snippets: Section “Percussion” in Snippets.

Pitched percussion

Certain pitched percussion instruments (e.g., xylophone, vibraphone, and timpani) are written using normal staves. This is covered in other sections of the manual.

See also

Notation Reference: Section 3.6 [Creating MIDI output], page 582.
Snippets: Section “Percussion” in Snippets.

Percussion staves

A percussion part for more than one instrument typically uses a multiline staff where each position in the staff refers to one piece of percussion. To typeset the music, the notes must be interpreted in DrumStaff and DrumVoice context.

```latex
up = \drummode { 
    crashcymbal4 hihat8 halfopenhihat hh hh hh openhihat 
} 

down = \drummode { 
    bassdrum4 snare8 bd r bd sn4 
} 
\new DrumStaff << 
\new DrumVoice { \voiceOne \up } 
\new DrumVoice { \voiceTwo \down } 
>>
```

The above example shows verbose polyphonic notation. The short polyphonic notation, described in Section “I’m hearing voices” in Learning Manual, can also be used. For example,

```latex
\new DrumStaff << 
\drummode { 
    bd4 sn4 bd4 sn4 
  } \repeat unfold 16 hh16 
\new DrumVoice { \voiceOne \up } 
\new DrumVoice { \voiceTwo \down } 
>>
```
There are also other layout possibilities. To use these, set the property drumStyleTable in context DrumVoice. The following variables have been predefined:

drums-style

This is the default. It typesets a typical drum kit on a five-line staff:

The drum scheme supports six different toms. When there are fewer toms, simply select the toms that produce the desired result. For example, to get toms on the three middle lines you use tommh, tomml, and tomfl.

agostini-drums-style

Invented by the French percussionist Dante Agostini in 1965, this notation is commonly employed in France but also elsewhere.
Based on the work of Norman Weinberg, published in his *Guidelines for Drumset Notation*.

```
\begin{music}
\input{drumStyles}
\end{music}
```

**timbales-style**

This typesets timbales on a two line staff:

```
\begin{music}
\input{timbales}
\end{music}
```

**congas-style**

This typesets congas on a two line staff:

```
\begin{music}
\input{congas}
\end{music}
```

**bongos-style**

This typesets bongos on a two line staff:

```
\begin{music}
\input{bongos}
\end{music}
```

**percussion-style**

To typeset all kinds of simple percussion on one-line staves:

```
\begin{music}
\input{percussion}
\end{music}
```

Custom percussion styles may also be defined, as explained in [Custom percussion staves], page 449.
Custom percussion staves

Custom percussion styles may be defined, to which the drumStyleTable property may then be set. Existing notations may be redefined as an association list where each entry has to be comprised of four items: a name, the note head style (or default), an articulation sign if needed (or #f if not), and the note head’s position on the staff. That list must then be converted into a Scheme hash table, using the alist->hash-table function.

```scheme
#(define mydrums '(
    (bassdrum default #f -1)
    (snare default #f 0)
    (hihat cross #f 1)
    (halfopenhihat cross halfopen 1)
    (pedalhihat xcircle stopped 2)
    (lowtom diamond #f 3)))
```

```
up = \drummode { hh8 hh hhho hhho hhp4 hhp }
down = \drummode { bd4 sn bd toml8 toml }
```

```
\new DrumStaff <<
    \set DrumStaff.drumStyleTable = #(alist->hash-table mydrums)
    \new DrumVoice { \voiceOne \up }
    \new DrumVoice { \voiceTwo \down }
>>
```

```
\[\text{Diagram of drum staffs}\]
```

New names may also be added to these custom notations through the drumPitchNames variable, that may be redefined as an association list (or augmented by appending a new list to its existing value, as demonstrated below), but also through its individual entries. This also makes it possible to define aliases: alternate input shorthand for some notations.

```scheme
drumPitchNames =
    #(append
        '(((leftsnap . sidestick)
           (rightsnap . ridecymbal))
        drumPitchNames)
```

```scheme
drumPitchNames.ls = #'sidestick
drumPitchNames.rs = #'ridecymbal
```

```
\drums { 
    leftsnap4. rightsnap8 leftsnap4 rightsnap
    ls8 rs ls rs ls4 rs
}
```
In a similar manner, the drumPitchTable property associates a specific pitch (meaning a different instrument sound, as provided by available MIDI soundfonts) to each notation. That property needs to be defined as a hash table, which is again converted from an association list (stored by default as the midiDrumPitches variable). Redefining these associations is achieved as explained above, either by defining an entire association list or through individual entries. The following example demonstrates how to create a whole notation set with its own input syntax, custom notations and corresponding MIDI output.

```lisp
#(define djembe-style
  '((dbass default #f -2)
    (dbassmute default stopped -2)
    (dopen default #f 0)
    (dopenmute default stopped 0)
    (dslap default #f 2)
    (dslapmute default stopped 2)))

drumPitchNames.db = #'dbass
drumPitchNames.dbm = #'dbassmute
drumPitchNames.do = #'dopen
drumPitchNames.dopenmute = #'dopenmute
drumPitchNames.dom = #'dopenmute
drumPitchNames.dslap = #'dslap
drumPitchNames.ds = #'dslap
drumPitchNames.dslapmute = #'dslapmute
drumPitchNames.dsm = #'dslapmute

midiDrumPitches.db = g
midiDrumPitches.dbm = fis
midiDrumPitches.dopen = a
midiDrumPitches.dopenmute = gis
midiDrumPitches.dslap = b
midiDrumPitches.dsm = ais

test = \drummode { dba4 do ds dbm dom dsm }
```

\score {
  \new DrumStaff \with { \override StaffSymbol.line-count = #3 
    instrumentName = "Djembe ",
    drumStyleTable = #(alist->hash-table djembe-style)
    drumPitchTable = #(alist->hash-table midiDrumPitches) } }
  \time 3/4
  \test 
} 
\layout {}
\midi {
Ghost notes

Also known as dead, muted, silenced or false notes; ghost notes can be created using the \parenthesize command, see [Parentheses], page 263.

\new DrumStaff <<
\new DrumVoice = "1" { s1 }
\new DrumVoice = "2" { s1 }
\drummode {

2.6 Wind instruments
This section includes elements of music notation that arise when writing specifically for wind instruments.

### 2.6.1 Common notation for wind instruments

This section discusses notation common to most wind instruments.

#### References for wind instruments

Many notation issues for wind instruments pertain to breathing and tonguing:

- Breathing can be specified by rests or [Breath marks], page 154.
- Legato playing is indicated by [Slurs], page 150.
- Different types of tonguing, ranging from legato to non-legato to staccato are usually shown by articulation marks, sometimes combined with slurs, see [Articulations and ornamentations], page 137, and Section A.15 [List of articulations], page 820.
- Flutter tonguing is usually indicated by placing a tremolo mark and a text markup on the note. See [Tremolo repeats], page 187.

Other aspects of musical notation that can apply to wind instruments:

- Many wind instruments are transposing instruments, see [Instrument transpositions], page 27.
- Slide glissandi are characteristic of the trombone, but other winds may perform keyed or valved glissandi. See [Glissando], page 156.
- Harmonic series glissandi, which are possible on all brass instruments but common for French Horns, are usually written out as [Grace notes], page 129.
- Pitch inflections at the end of a note are discussed in [Falls and doits], page 155.
- Key slaps or valve slaps are often shown by the cross style of [Special note heads], page 40.
- Woodwinds can overblow low notes to sound harmonics. These are shown by the flageolet articulation. See Section A.15 [List of articulations], page 820.
- The use of brass mutes is usually indicated by a text markup, but where there are many rapid changes it is better to use the stopped and open articulations. See [Articulations and ornamentations], page 137, and Section A.15 [List of articulations], page 820.

Notation Reference: [Breath marks], page 154, [Slurs], page 150, [Articulations and ornamentations], page 137, Section A.15 [List of articulations], page 820, [Tremolo repeats], page 187, [Instrument transpositions], page 27, [Glissando], page 156, [Grace notes], page 129, [Falls and doits], page 155, [Special note heads], page 40.

Snippets: Section “Winds” in Snippets.

#### Fingerings

All wind instruments other than the trombone require the use of several fingers to produce each pitch. Some fingering examples are shown in the snippets below.

Woodwind diagrams can be produced and are described in Section 2.6.3.1 [Woodwind diagrams], page 456.

#### Selected Snippets
Fingering symbols for wind instruments

Special symbols can be achieved by combining existing glyphs, which is useful for wind instruments.

\begin{musicglyph}\scripts.open\end{musicglyph} \begin{musicglyph}\scripts.tenuto\end{musicglyph} \begin{musicglyph}\scripts.stopped\end{musicglyph}

Recorder fingering chart

The following example demonstrates how fingering charts for wind instruments can be realized.

% range chart for paetzold contrabass recorder

\begin{musicglyph}\scripts.open\end{musicglyph} \begin{musicglyph}\scripts.stopped\end{musicglyph} \begin{musicglyph}\scripts.tenuto\end{musicglyph}
Chapter 2: Specialist notation

See also

Notation Reference: Section 2.6.3.1 [Woodwind diagrams], page 456.

Snippets: Section “Winds” in Snippets.

2.6.2 Bagpipes

This section discusses notation common bagpipes.

Bagpipe definitions

LilyPond contains special definitions for Scottish, Highland Bagpipe music; to use them, add

\include "bagpipe.ly"

to the top of your input file. This lets you add the special grace notes common to bagpipe music with short commands. For example, you could write \taor instead of
\grace { \small G32[ d G e] }

bagpipe.ly also contains pitch definitions for the bagpipe notes in the appropriate octaves, so you do not need to worry about \relative or \transpose.

\include "bagpipe.ly"
{ \grG G4 \grg a \grG b \grg c \grG d \grg e \grG f \grA g A }

Bagpipe music nominally uses the key of D Major (even though that isn’t really true). However, since that is the only key that can be used, the key signature is normally not written out. To set this up correctly, always start your music with \hideKeySignature. If you for some reason want to show the key signature, you can use \showKeySignature instead.

Some modern music use cross-fingering on c and f to flatten those notes. This can be indicated by c-flat or f-flat. Similarly, the piobaireachd high g can be written g-flat when it occurs in light music.

Snippets: Section “Winds” in Snippets.

Bagpipe example
This is what the well known tune Amazing Grace looks like in bagpipe notation.

\include "bagpipe.ly"
\layout {
  indent = 0.0\cm
  \context { \Score \remove Bar_number_ engraver }
}

\header {
  title = "Amazing Grace"
  meter = "Hymn"
  arranger = "Trad. arr."
}

{\hideKeySignature
  \time 3/4
  \grG \partial 4 a8. d16
  \slurd d2 \grG f8[ e32 d16.]
  \grG f2 \grG f8 e
  \thrwd d2 \grG b4
  \grG a2 \grG a8. d16
  \slurd d2 \grG f8[ e32 d16.]
  \grG f2 \grG e8. f16
  \dblA A2 \grG A4
  \grG A2 f8. A16
  \grG A2 \hdblf f8[ e32 d16.]
  \grG f2 \grG f8 e
  \thrwd d2 \grG b4
2.6.3 Woodwinds

This section discusses notation specifically for woodwind instruments.

2.6.3.1 Woodwind diagrams

Woodwind diagrams can be used to indicate the fingering to be used for specific notes and are available for the following instruments:

- piccolo
- flute
- oboe
- clarinet
- bass clarinet
- saxophone
- bassoon
- contrabassoon

Woodwind diagrams are created as markups:

```
c’’1”\markup {
   \woodwind-diagram #’piccolo #’{(lh . (gis))
   (cc . (one three))
   (rh . (ees))}
}
```
Keys can be open, partially-covered, ring-depressed, or fully covered. The angle of partially-covered keys can be specified:

\textLengthOn
c"'1"\markup {
\center-column {
  "one quarter"
\woodwind-diagram #'flute '((cc . (one1q)))
  (lh . ())
  (rh . ()))
}
}

c"'1"\markup {
\center-column {
  "one half"
\woodwind-diagram #'flute '((cc . (one1h)))
  (lh . ())
  (rh . ()))
}
}

c"'1"\markup {
\center-column {
  "three quarter"
\woodwind-diagram #'flute '((cc . (one3q)))
  (lh . ())
  (rh . ()))
}
}

c"'1"\markup {
\center-column {
  "ring"
\woodwind-diagram #'flute '((cc . (oneR)))
  (lh . ())
  (rh . ()))
}
}

c"'1"\markup {
\center-column {
  "full"
Trills are indicated as shaded keys, or in non-graphical mode, as either circled (the default) or shaded text:

\textLengthOn

\markup {c''1

\center-column {"one half, vertical"
\override #'(woodwind-diagram-details . ((fill-angle . 90)))
\woodwind-diagram #'flute '((cc . (oneF two))
 (1h . ()))
 (rh . ()))
}

}\markup {c''1

\center-column {
 "one half, vertical"
 \override #'(woodwind-diagram-details . ((fill-angle . 90)))
 \woodwind-diagram #'flute '((cc . (one1h))
 (1h . ()))
 (rh . ()))
}

}\markup {c''1

\center-column {
 "one quarter, one half, three quarter, ring, full, one half, vertical"
 \override #'(graphical . #f)
 \override #'(woodwind-diagram-details . ((text-trill-circled . #f)))
 \woodwind-diagram #'bass-clarinet
 '((cc . (threeT four))
 (1h . ()))
 (rh . (b fisT)))
}

}\markup {c''1

\center-column {
 "one quarter, one half, three quarter, ring, full, one half, vertical"
 \override #'(graphical . #f)
 \override #'(woodwind-diagram-details . ((text-trill-circled . #f)))
 \woodwind-diagram #'bass-clarinet
 '((cc . (threeT four))
 (1h . ()))
 (rh . (b fisT)))
}

}\markup {c''1

\center-column {
 "one quarter, one half, three quarter, ring, full, one half, vertical"
 \override #'(graphical . #f)
 \override #'(woodwind-diagram-details . ((text-trill-circled . #f)))
 \woodwind-diagram #'bass-clarinet
 '((cc . (threeT four))
 (1h . ()))
 (rh . (b fisT)))
}
A variety of trills can be displayed:

\textLengthOn
c''1\markup { 
\center-column { 
"one quarter to ring"
\woodwind-diagram #'flute #'((cc . (one1qTR))
(1h . ()))
(rh . ()))
}
}

c''1\markup {
\center-column {
"ring to shut"
\woodwind-diagram #'flute #'((cc . (oneTR))
(1h . ()))
(rh . ()))
}
}

c''1\markup {
\center-column {
"ring to open"
\woodwind-diagram #'flute #'((cc . (oneRT))
(1h . ()))
(rh . ()))
}
}

c''1\markup {
\center-column {
"open to shut"
\woodwind-diagram #'flute #'((cc . (oneT))
(1h . ()))
(rh . ()))
}
}

c''1\markup {
\center-column {
"one quarter to three quarters"
The list of all possible keys and settings for a given instrument can be displayed on the console using #(print-keys-verbose 'flute) or in the log file using #(print-keys-verbose 'flute (current-error-port)), although they will not show up in the music output.

Creating new diagrams is possible, although this will require Scheme ability and may not be accessible to all users. The patterns for the diagrams are in files scm/define-woodwind-diagrams.scm and scm/display-woodwind-diagrams.scm.

Predefined commands

Selected Snippets

Woodwind diagrams listing

The following music shows all of the woodwind diagrams currently defined in LilyPond.

\layout {  
  indent = 0  
}  

\relative c' {  
  \textLengthOn  
  \markup {  
    \center-column {  
      'tin-whistle  
      " "  
    \woodwind-diagram  
      #'tin-whistle}  
  \timesig.C44/clefs.G  
  one quarter to ring  
  ring to shut  
  ring to open  
  open to shut  
  one quarter to three quarters  
}
Chapter 2: Specialist notation

\begin{center-column}
\begin{itemize}
\item piccolo
\item flute
\item oboe
\item clarinet
\item bass-clarinet
\end{itemize}
\end{center-column}
Graphical and text woodwind diagrams

In many cases, the keys other than the central column can be displayed by key name as well as by graphical means.

```
\relative c' {
  \textLengthOn
  c1\markup
  \woodwind-diagram
    #'piccolo
    #'((cc . (one three))
        (lh . (gis))
        (rh . (ees)))

  c\markup
  \override #'(graphical . #f) {
    \woodwind-diagram
      #'piccolo
      #'((cc . (one three))
          (lh . (gis))
          (rh . (ees)))
  }
}
```

Changing the size of woodwind diagrams

The size and thickness of woodwind diagrams can be changed.

```
\relative c' {
  \textLengthOn
  c1\markup
```
Woodwind diagrams key lists

The snippet below produces a list of all possible keys and key settings for woodwind diagrams as defined in `scm/define-woodwind-diagrams.scm`. The list will be displayed in the log file, but not in the music. If output to the console is wanted, omit the `(current-error-port)` from the commands.

```lisp
#(print-keys-verbose 'piccolo (current-error-port))
#(print-keys-verbose 'flute (current-error-port))
#(print-keys-verbose 'flute-b-extension (current-error-port))
#(print-keys-verbose 'tin-whistle (current-error-port))
#(print-keys-verbose 'oboe (current-error-port))
#(print-keys-verbose 'clarinet (current-error-port))
#(print-keys-verbose 'bass-clarinet (current-error-port))
#(print-keys-verbose 'low-bass-clarinet (current-error-port))
#(print-keys-verbose 'soprano-saxophone (current-error-port))
#(print-keys-verbose 'alto-saxophone (current-error-port))
#(print-keys-verbose 'tenor-saxophone (current-error-port))
#(print-keys-verbose 'baritone-saxophone (current-error-port))
#(print-keys-verbose 'bassoon (current-error-port))
```
Chapter 2: Specialist notation

\{(print-keys-verbose 'contrabassoon (current-error-port))\}

\score {c'1}

Snippets: Section “Winds” in Snippets.

2.7 Chord notation

Chords can be entered either as normal notes or in chord mode and displayed using a variety of traditional European chord naming conventions. Chord names and figured bass notation can also be displayed.

2.7.1 Chord mode

Chord mode is used to enter chords using an indicator of the chord structure, rather than the chord pitches.

Chord mode overview

Chords can be entered as simultaneous music, as discussed in [Chorded notes], page 189.

Chords can also be entered in “chord mode”, which is an input mode that focuses on the structures of chords in traditional European music, rather than on specific pitches. This is convenient for those who are familiar with using chord names to describe chords. More information on different input modes can be found at Section 3.1 [Input modes], page 531.

\chordmode \{ c1 g a g c \}
Chords entered using chord mode are music elements, and can be transposed just like chords entered using simultaneous music. \chordmode is absolute, as \relative has no effect on chordmode blocks. However, in \chordmode the absolute pitches are one octave higher than in note mode.

Chord mode and note mode can be mixed in sequential music:

```
relative {
  <c' e g>2 <g b d>
  \chordmode { c2 f }
  <c e g>2 <g' b d>
  \chordmode { f2 g }
}
```

See also
Notation Reference: [Chorded notes], page 189, Section 3.1 [Input modes], page 531.
Snippets: Section “Chords” in Snippets.

Known issues and warnings
Predefined shorthands for articulations and ornaments cannot be used on notes in chord mode, see [Articulations and ornamentations], page 137.

Common chords
Major triads are entered by including the root and an optional duration:

```
\chordmode { c2 f4 g }
```

Minor, augmented, and diminished triads are entered by placing : and a quality modifier string after the duration:

```
\chordmode { c2:m f4:aug g:dim }
```

Seventh chords can be created:

```
\chordmode { c1:7 c:m7 c:maj7 c:dim7 c:aug7 }
```
The table below shows the actions of the quality modifiers on triads and seventh chords. The default seventh step added to chords is a minor or flatted seventh, which makes the dominant seventh the basic seventh chord. All alterations are relative to the dominant seventh. A more complete table of modifier usage is found at Section A.2 [Common chord modifiers], page 718.

<table>
<thead>
<tr>
<th>Modifier</th>
<th>Action</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>None</td>
<td>The default action; produces a major triad.</td>
<td><img src="example.gif" alt="Example" /></td>
</tr>
<tr>
<td>m, m7</td>
<td>The minor chord. This modifier lowers the 3rd.</td>
<td><img src="example.gif" alt="Example" /></td>
</tr>
<tr>
<td>dim, dim7</td>
<td>The diminished chord. This modifier lowers the 3rd, 5th and (if present) the 7th step.</td>
<td><img src="example.gif" alt="Example" /></td>
</tr>
<tr>
<td>aug</td>
<td>The augmented chord. This modifier raises the 5th step.</td>
<td><img src="example.gif" alt="Example" /></td>
</tr>
<tr>
<td>maj, maj7</td>
<td>The major 7th chord. This modifier adds a raised 7th step. The 7 following maj is optional. Do NOT use this modifier to create a major triad.</td>
<td><img src="example.gif" alt="Example" /></td>
</tr>
</tbody>
</table>

**See also**

Notation Reference: Section A.2 [Common chord modifiers], page 718, [Extended and altered chords], page 467.

Snippets: Section “Chords” in Snippets.

**Known issues and warnings**

Only one quality modifier should be used per chord, typically on the highest step present in the chord. Chords with more than quality modifier will be parsed without an error or warning, but the results are unpredictable. Chords that cannot be achieved with a single quality modifier should be altered by individual pitches, as described in [Extended and altered chords], page 467.

**Extended and altered chords**

Chord structures of arbitrary complexity can be created in chord mode. The modifier string can be used to extend a chord, add or remove chord steps, raise or lower chord steps, and add a bass note or create an inversion.

The first number following the : is taken to be the extent of the chord. The chord is constructed by sequentially adding thirds to the root until the specified number has been reached. Note that the seventh step added as part of an extended chord will be the minor or flatted seventh, not the major seventh. If the extent is not a third (e.g., 6), thirds are added up to the highest
third below the extent, and then the step of the extent is added. The largest possible value for
the extent is 13. Any larger value is interpreted as 13.

\chordmode {  
c1:2 c:3 c:4 c:5  
c1:6 c:7 c:8 c:9  
c1:10 c:11 c:12 c:13  
c1:14  
}

\chordmode {  
c1:13 c:13.11 c:m13  
}

As a special exception, c:5 produces a ‘power chord’ only consisting of root and fifth.

Since an unaltered 11 does not sound good when combined with an unaltered 13, the 11 is
removed from a :13 chord (unless it is added explicitly).

\chordmode {  
c1:13 c:13.11 c:m13  
}

Individual steps can be added to a chord. Additions follow the extent and are prefixed by a
dot (.). The basic seventh step added to a chord is the minor or flatted seventh, rather than
the major seventh.

\chordmode {  
c1:3.5.6 c:3.7.8 c:3.6.13  
}

Added steps can be as high as desired.

\chordmode {  
c4:3.5.15 c:3.5.20 c:3.5.25 c:3.5.30  
}

Added chord steps can be altered by suffixing a - or + sign to the number. To alter a step
that is automatically included as part of the basic chord structure, add it as an altered step.

\chordmode {  

Following any steps to be added, a series of steps to be removed is introduced in a modifier string with a prefix of \( ^- \). If more than one step is to be removed, the steps to be removed are separated by a following the initial \( ^- \).

\[
\text{\texttt{chordmode}} \{ \text{c1:}^3 \text{c:}^5 \text{c:}^5 \text{c:}^3 \text{c:}^3 \text{c:}^3 \text{c:}^3 \text{c:}^5 \text{c:}^5 \text{c:}^7 \text{c:}^7 \}\]

The modifier \texttt{sus} can be added to the modifier string to create suspended chords. This removes the 3rd step from the chord. Append either 2 or 4 to add the 2nd or 4th step to the chord. When \texttt{sus} is followed by either a 2nd or 4th step, it is equivalent to \( ^3 \), otherwise to \texttt{sus4}, namely \( 5^4 \).

\[
\text{\texttt{chordmode}} \{ \text{c1:} \texttt{sus} \text{c:} \texttt{sus2} \text{c:} \texttt{sus4} \text{c:}^5 \text{c:}^4 \}\]

If the added pitch is already part of the chord, this may be used to print chord inversions, in which case the pitch is not added but merely moved to the bottom of the chord. It may however be treated as an added note (and thus printed twice), by using the syntax \texttt{\texttt{+pitch}}.

\[
\text{\texttt{chordmode}} \{ \text{c1:} \texttt{c'/g} \text{c'/+e} \}\]

Automatic chord inversions and voicings are demonstrated in [Chord inversions and specific voicings], page 470.

Chord modifiers that can be used to produce a variety of standard chords are shown in Section A.2 [Common chord modifiers], page 718.
See also
Notation Reference: [Chord inversions and specific voicings], page 470, Section A.2 [Common chord modifiers], page 718.
Snippets: Section “Chords” in Snippets.

Known issues and warnings
Each step can only be present in a chord once. The following simply produces the augmented chord, since 5+ is interpreted last.

\chordmode { c1:3.5.5-.5+ }

Chord inversions and specific voicings
In addition to chord modifiers and added bass notes, various functions may be used to automatically print chords in a specific inversion or voicing – for example the so-called ‘drop 2’ voicing commonly used in jazz music.

\chordmode {
  \dropNote 2 {
    c2:maj7 d:m7
  }
  \invertChords 1 d1:maj7
}

Unlike added bass notes shown in [Extended and altered chords], page 467, this only affects the way chords are printed on a staff, and not chord names written with letters. Furthermore, these functions may be used not only in chord mode but also with <...> chords constructs explained in [Chorded notes], page 189.

See also
Notation Reference: [Extended and altered chords], page 467, [Chorded notes], page 189.
Snippets: Section “Chords” in Snippets.

2.7.2 Displaying chords
Chords can be displayed by name, in addition to the standard display as notes on a staff.

Printing chord names
Chord names are printed in the ChordNames context:

\new ChordNames {
  \chordmode {
    c2 f4. g8
  }
}

C F G
Chords can be entered as simultaneous notes or through the use of chord mode. The displayed chord name will be the same, regardless of the mode of entry, unless there are inversions or added bass notes:

```
chordmusic = \relative {  
  <c' e g>2 <f bes c>  
  <f c' e g>1  
  \chordmode {  
    c2 f:sus4 c1:/f  
  }  
}  
<<  
\new ChordNames {  
  \chordmusic  
}  
{  
  \chordmusic  
}  
>>  
```

When passed to a ChordNames context, rests (including multi-measure rests) cause the text “N.C.” (No Chord) to be displayed.

```
myChords = \chordmode {  
  c1  
  r1  
  g1  
  R1  
  c1  
}  
<<  
\new ChordNames \myChords  
\new Staff \myChords  
>>  
```

```
\chords { ... } is a shortcut notation for \new ChordNames \chordmode { ... }.
\chords {  
  c2 f4:m g8:maj7  
}  
```

```
C Fm G\^\  
\new ChordNames {  
  \chordmode {  
```
c2 f4:m g8:maj7
}

C Fm G^\n
Selected Snippets

Showing chords at changes

By default, every chord entered is printed; this behavior can be modified so that chord names are printed only at the start of lines and when the chord changes.

```
harmonies = \chordmode {
  c1:m c:m \break c:m c:m d
}

<<
\new ChordNames {
  \set chordChanges = ##t
  \harmonies
}
\new Staff {
  \relative c' { \harmonies }
}
>>

```

Simple lead sheet

When put together, chord names, a melody, and lyrics form a lead sheet:

```
<<
\chords { c2 g:sus4 f e }
\new Staff \relative c'' {
  a4 e c8 e r4
  b2 c4( d)
}
\addlyrics { One day this shall be free ___ }
>>

```

One day this shall be free____
Customizing the no-chord symbol

By default, rests in a ChordNames context cause the “N.C.” symbol to be printed. This markup can be customized.

```
<<
  \chords {
    R1
    \set noChordSymbol = "---"
    R1
    \set noChordSymbol = \markup \italic "Ssh!"
    R1
  }
  {R1*3}
>>
```

N.C. — Ssh!

Notation Reference: [Writing music in parallel], page 211.

Snippets: Section “Chords” in Snippets.

Internals Reference: Section “ChordNames” in Internals Reference, Section “ChordName” in Internals Reference, Section “Chord_name_engraver” in Internals Reference, Section “Volta_engraver” in Internals Reference, Section “Bar_engraver” in Internals Reference.

Known issues and warnings

Chords containing inversions or altered bass notes are not named properly if entered using simultaneous music.

Customizing chord names

There is no unique system for naming chords. Different musical traditions use different names for the same set of chords. There are also different symbols displayed for a given chord name. The names and symbols displayed for chord names are customizable.

The basic chord name layout is a system for Jazz music, proposed by Klaus Ignatzek (see Section “Literature list” in Essay). (Other chord naming systems may be implemented through Scheme functions, as demonstrated by the “Chord names alternative” snippet in Section “Chords” in Snippets.) A list of common jazz chords notations may be found on the chart in Section A.1 [Chord name chart], page 718.

The default naming system may be tweaked easily in a number of ways. To begin with, predefined commands allow to use different languages for the root pitch. These include \germanChords, \semiGermanChords, \italianChords and \frenchChords:
German songbooks may indicate minor chords as lowercase letters, without any m suffix. This can be obtained by setting the chordNameLowercaseMinor property:

```
\chords {
  \set chordNameLowercaseMinor = ##t
  c2 d:m e:m f
}
```

The chord name display can also be tuned through the following properties.

cordRootNamer
The chord name is usually printed as a letter for the root with an optional alteration. The transformation from pitch to letter is done by this function. Special note names (for example, the German 'H' for a B-chord) can be produced by storing a new function in this property.

majorSevenSymbol
This property contains the markup object used to follow the output of chordRootNamer to identify a major 7 chord. Predefined options are whiteTriangleMarkup and blackTriangleMarkup.

additionalPitchPrefix
When the chord name contains additional pitches, they can optionally be prefixed with some text. The default is no prefix, in order to avoid too much visual clutter, but for small numbers of additional pitches this can be visually effective.

```
\new ChordNames {
  <c e g d'>    % add9
  \set additionalPitchPrefix = "add"
  <c e g d'>    % add9
}
```

chordNoteNamer
When the chord name contains additional pitches other than the root (e.g., an added bass note), this function is used to print the additional pitch. By default the pitch is printed using chordRootNamer. The chordNoteNamer property can be set to a specialized function to change this behavior. For example, the bass note can be printed in lower case.

chordNameSeparator
Different parts of a chord name are normally separated by a small amount of horizontal space. By setting chordNameSeparator, you can use any desired markup for
a separator. This does not affect the separator between a chord and its bass note; to customize that, use `slashChordSeparator`.

```
\chords {
  c4:7.9- c:7.9-/g
\set chordNameSeparator = \markup { "/" }
\break
  c4:7.9- c:7.9-/g
}

C\text{7}\text{b9} C\text{7}\text{b9}/G

C\text{7}\text{b9} C\text{7}/\text{b9}/G
```

`slashChordSeparator`

Chords can be played over a bass note other than the conventional root of the chord. These are known as “inversions” or “slash chords”, because the default way of notating them is with a forward slash between the main chord and the bass note. Therefore the value of `slashChordSeparator` defaults to a forward slash, but you can change it to any markup you choose.

```
\chords {
  c4:7.9- c:7.9-/g
\set slashChordSeparator = \markup { " over " }
\break
  c4:7.9- c:7.9-/g
}

C\text{7}\text{b9} C\text{7}\text{b9}/G

C\text{7}\text{b9} C\text{7}/\text{b9} over G
```

`chordNameExceptions`

This property is a list of pairs. The first item in each pair is a set of pitches used to identify the steps present in the chord. The second item is a markup that will follow the `chordRootNamer` output to create the chord name.

`minorChordModifier`

Minor chords are often denoted via a ‘m’ suffix to the right of the root of the chord. However some idioms prefer other suffices, such as a minus sign.

```
\chords {
  c4:min f:min7
\set minorChordModifier = \markup { "-" }
\break
  c4:min f:min7
}

Cm Fm\text{7}

C\text{-} F\text{-}\text{7}
```

`chordPrefixSpacer`

The modifier for minor chords as determined by `minorChordModifier` is usually printed immediately to the right of the root of the chord. A spacer can be placed between the root and the modifier by setting `chordPrefixSpacer`. The spacer is not used when the root is altered.

Notation Reference: Section A.1 [Chord name chart], page 718, Section A.2 [Common chord modifiers], page 718.
Essay on automated music engraving: Section “Literature list” in Essay.
Snippets: Section “Chords” in Snippets.

Known issues and warnings
Chord names are determined from both the pitches that are present in the chord and the information on the chord structure that may have been entered in \chordmode. If the simultaneous pitches method of entering chords is used, undesired names result from inversions or bass notes.

\myChords = \relative c' { \chordmode { c1 c/g c/f } <c e g>\{1 <g c e> <f c' e g> } << \new ChordNames { \myChords } \new Staff { \myChords } >>

Chord grids
In some European countries, particularly France, jazz musicians use so-called ‘chord grids’, which notate chords visually by placing them in squares.

Although they are omitted in the rest of this section for brevity, it is recommended to use the following \paper settings for chord grids:
\begin{verbatim}
\paper {
    indent = 0
    ragged-right = ##f
}
\end{verbatim}
indent = 0 ensures that the first line is not indented as it would normally be (see \paper variables for shifts and indents], page 604). ragged-right = ##f is necessary for single-line grids to ensure they span the whole page; see \paper variables for widths and margins], page 602.

In order to create a chord grid, instantiate a ChordGrid context.
\new ChordGrid \chordmode { c1 d1:m e1:7 f1:7+ }
Each square is automatically subdivided.

\new ChordGrid \chordmode {
  c1
d2 c2
e2. c4
}

Chords spanning a complete measure are centered within their square. Chords lasting half a measure take half the square, and those lasting a quarter of a measure take a quarter of the square. This summary picture shows the default rules for subdividing the square:

The \medianChordGridStyle changes the default display of squares with four chords of equal length to use the style recommended by Philippe Baudoin in his book Jazz, mode d’emploi ("Jazz, user instructions").

\layout {
  \context {
    \ChordGrid
    \medianChordGridStyle
  }
}

\default

\hline
\end{tabular}
\end{center}

Selected Snippets

**Customizing the chord grid style**

Custom divisions of chord squares can be defined through the measure-division-lines-alist and measure-division-chord-placement-alist properties of ChordSquare. These are both alists. Their keys are measure divisions, namely lists which give the fraction of the measure that each chord (or rest, or skip) represents. More precisely, a measure division alist is made of positive, exact numbers adding up to 1, for example: '(1/2 1/4 1/4). The exactness requirement means that, e.g., 1/2 is valid but not 0.5.

The values in measure-division-lines-alist are lists of lines, which are represented as (x1 y1 x2 y2). The line starts at the point (x1 . y1) and ends at (x2 . y2). Coordinates are expressed in the [-1, 1] scale relative to the extent of the square.

The values in measure-division-chord-placement-alist are lists of (x . y) pairs giving the placement of the respective chords.

This example defines a peculiar chord grid style that has a rule for measures divided in three equal parts.

\paper
{\scriptsize
\begin{center}
line-width = 10\cm
ragged-right = ##f
\end{center}
}\new ChordGrid \with {
\override ChordSquare.measure-division-lines-alist = 
'((1) . ()
 (1/3 1/3 1/3) . ((-1 -0.4 0 1) (0 -1 1 0.4)))
\override ChordSquare.measure-division-chord-placement-alist = 
'((1) . ((0 . 0))
 (1/3 1/3 1/3) . ((-0.7 . 0.5) (0 . 0) (0.7 . -0.5)))
}
\chordmode
{\time 3/4

2.7.3 Figured bass
Introduction to figured bass

LilyPond has support for figured bass, also called thorough bass or basso continuo.

\new\Voice\{\clef bass dis4 c d ais g fis}\new\FiguredBass\{\figuremode\{<6>4 <7\>+8 <6+ [!>] <6>4 <6 5 [3+]> | <\>_4 <6 5/4\}\}\}

The support for figured bass consists of two parts: there is an input mode, introduced by $\texttt{\figuremode}$, that accepts entry of bass figures, and there is a context named $\texttt{\FiguredBass}$ that takes care of displaying $\texttt{\BassFigure}$ objects. Figured bass can also be displayed in $\texttt{\Staff}$ contexts.

$\texttt{\figures\{\ldots\}}$ is a shortcut notation for $\texttt{\new\FiguredBass\figuremode\{\ldots\}}$.

Although the support for figured bass may superficially resemble chord support, it is much simpler. $\texttt{\figuremode}$ mode simply stores the figures and the $\texttt{\FiguredBass}$ context prints them as entered. There is no conversion to pitches.

See also

Snippets: Section “Chords” in Snippets.

Entering figured bass

$\texttt{\figuremode}$ is used to switch the input mode to figure mode. See Section 3.1 [Input modes], page 531, for more information on different input modes.

In figure mode, a group of bass figures is delimited by ‘<’ and ‘>’. The duration is entered after the ‘>’.

\new\FiguredBass\{\figuremode\{<6 4>2\}\}\}

Accidentals (including naturals) may be used for modifying scale steps. These are entered by appending ‘+’ (for sharps), ‘-’ (for flats) or ‘!’ (for naturals) after the number. For double accidentals the modifier is applied twice. For the modification of the third step the number is often omitted, which can be achieved by using ‘_’ instead of a number.

\figures\{<7! 6+ 4-> <5++> <3--> <_+> <7 !_>\}
If used without accidental, ‘_’ creates an empty figure which nevertheless takes up space. This can be used for controlling the stacking of bass figures.

\begin{music}
\{ \\
\clef bass \\
g2 c4 \\
\figures \\
\(<_5 4>4 <8 _3>8 <7> \\
\}
\end{music}

Augmented and diminished steps can be indicated.

\begin{music}
\{ \\
\figures \\
\(<6\+ 5/> <7/> <7 \-_\+> \\
\}
\end{music}

A backward slash through a figure is also available.

\begin{music}
\{ \\
\figures \\
\(<5> <5\backslash> \\
\}
\end{music}

For some figures, special backward slash glyphs are provided.

\begin{music}
\{ \\
\figures \\
\(<8 6\backslash> <9 7\backslash> <9\backslash 7> \\
\}
\end{music}

Brackets can be added around accidentals, figures, and consecutive groups of figures.

\begin{music}
\{ \\
\figures \\
\(<9[-] 8 [7-] 5 [4[1] 2+]> \\
\}
\end{music}

Any text markup can be inserted as a figure.

\begin{music}
\{ \\
\markup { \fontsize #-5 \number 6 \teeny \super (1) } 5> \\
\}
\end{music}
Continuation lines can be used to indicate repeated figures.

```
<<
{\clef bass
e4 d c b,
e4 d c b,
}\figures{
\bassFigureExtendersOn
<6 4>4 <6 3> <7 3> <7 3>
}\bassFigureExtendersOff
<6 4>4 <6 3> <7 3> <7 3>
}
>>
```

In this case, the extender lines replace existing figures, unless the continuation lines have been explicitly terminated with `\!`.

```
<<\figures{
\bassFigureExtendersOn
<6 4>4 <6 4> <6\! 4\!> <6 4>
}\bassFigureExtendersOff
<6 4>4 <6 3> <7 3> <7 3>
}
{\clef bass
d4 d c c
}
>>
```

The table below summarizes the figure modifiers available.

<table>
<thead>
<tr>

Predefined commands
\bassFigureExtendersOn, \bassFigureExtendersOff.

Selected Snippets

*Changing the positions of figured bass alterations*

Accidentals and plus signs can appear before or after the numbers, depending on the figuredBassAlterationDirection and figuredBassPlusDirection properties.

If plus signs appear after the number, specially designed glyphs are provided for some figures.

\begin{verbatim}
\figures {
  \set figuredBassPlusDirection = #RIGHT
  <5\+> <5+ 4\+> <6 4- 2\+> r
  \set figuredBassAlterationDirection = #RIGHT
  <5\+> <5+ 4\+> <6 4- 2\+> r
  \set figuredBassPlusDirection = #LEFT
  <5\+> <5+ 4\+> <6 4- 2\+> r
}
\end{verbatim}

\begin{verbatim}
-5 #5 6 -5 5\# 6 5\# 6 5\# 6 5\# 6 5\# 6
-4 \#2 -4 \#2 -4 \#2 -4 \#2 -4 \#2 -4 \#2 -4 \#2
\end{verbatim}

*Adjusting figured bass alteration glyphs*

In figured bass, specially designed glyphs for 6\, 7\, and 9\ are used by default. Similarly, specially designed glyphs for symbols 2\+, 4\+, and 5\+ are used by default if plus signs appear after the number.

To change that, pass an alist to figuredBassPlusStrokedAlist and set the glyph in question to #f (or omit it).

\begin{verbatim}
\figures {
  \set figuredBassPlusDirection = #RIGHT
  <6\\> <7\\> <9\\> r
  <2\+> <4\+> <5\+> r

  \set figuredBassPlusStrokedAlist =
    \#'(\(2 . "figbass.twoplus"
         --\(4 . "figbass.fourplus"
         --\(5 . "figbass.fiveplus"
         \(6 . "figbass.sixstroked"
         --\(7 . "figbass.sevenstroked"
         --\(9 . "figbass.ninestroked"
       )

  <6\\> <7\\> <9\\> r
  <2\+> <4\+> <5\+> r
}
\end{verbatim}

\begin{verbatim}
6 7 9 2 4 5 6 7 9 2 4 5
\end{verbatim}

Snippets: Section “Chords” in Snippets.

Internals Reference: Section “BassFigure” in Internals Reference, Section “BassFigure-Alignment” in Internals Reference, Section “BassFigureLine” in Internals Reference, Section “BassFigureBracket” in Internals Reference, Section “BassFigureContinuation” in Internals Reference, Section “FiguredBass” in Internals Reference.

Displaying figured bass

Figured bass can be displayed using the FiguredBass context, or in most staff contexts.

When displayed in a FiguredBass context, the vertical location of the figures is independent of the notes on the staff.

```
\relative {  
c'\'4 c'8 r8 c,4 c'  
}\new FiguredBass {  
\figuremode {  
<4>4 <10 6>8 s8  
<6 4>4 <6 4>  
}  
}  
>>
```

In the example above, the FiguredBass context must be explicitly instantiated to avoid creating a second (empty) staff.

Figured bass can also be added to Staff contexts directly. In this case, the vertical position of the figures is adjusted automatically.

```
\new Staff = "myStaff"  
\figuremode {  
<4>4 <10 6>8 s8  
<6 4>4 <6 4>  
}  
%% Put notes on same Staff as figures  
\context Staff = "myStaff" {  
\clef bass  
c4 c'8 r8 c4 c'  
}  
>>
```

When added in a Staff context, figured bass can be displayed above or below the staff.

```
```
The horizontal alignment of numbers in a figured bass stack that have more than a single digit can be controlled with the context property `figuredBassLargeNumberAlignment`.

```
<<
\new Voice {
  \clef bass
  r2 d | d d | a2
}
\new FiguredBass \figuremode {
  s2 <10+ 8> |
  \set figuredBassLargeNumberAlignment = #RIGHT
  <11 9>2
  \set figuredBassLargeNumberAlignment = #LEFT
  <10+ 9>2 |
  _+>2
}
>>
```

The vertical distance of figured bass elements can be controlled with subproperties `minimum-distance` and `padding` of `staff-staff-spacing`.

```
<<
  { \clef bass g,2 c, }
\figures {
  \once \override BassFigureLine
    .staff-staff-spacing.minimum-distance = 3
    <7 _-> <7- _->
}
>>
```
Predefined commands
\bassFigureStaffAlignmentDown, \bassFigureStaffAlignmentUp, \bassFigureStaffAlignmentNeutral.

See also
Snippets: Section “Chords” in Snippets.

Known issues and warnings
To ensure that continuation lines work properly, it is safest to use the same rhythm in the figure line as in the bass line.

```
<<
{\
clef bass
\repeat unfold 4 { f16. g32 } f8. es16 d8 es
}
\figures{
  \bassFigureExtendersOn
  % The extenders are correct here,  
  % with the same rhythm as the bass. 
  \repeat unfold 4 { <6 4 ->16. <6 4 ->32 }
  <5>8. r16 <6>8 <6\! 5->
}
>>
```

```
<<
{\
clef bass
\repeat unfold 4 { f16. g32 } f8. es16 d8 es
}
\figures{
  \bassFigureExtendersOn
  % The extenders are incorrect here,  
  % even though the timing is the same. 
  <6 4 ->4 <6 4 ->4
  <5>8. r16 <6>8 <6\! 5->
}
>>
```
2.8 Contemporary music

From the beginning of the 20th Century there has been a massive expansion of compositional style and technique. New harmonic and rhythmic developments, an expansion of the pitch spectrum and the development of a wide range of new instrumental techniques have been accompanied by a parallel evolution and expansion of musical notation. The purpose of this section is to provide references and information relevant to working with these new notational techniques.

2.8.1 Pitch and harmony in contemporary music

This section highlights issues that are relevant to notating pitch and harmony in contemporary music.

References for pitch and harmony in contemporary music
- Standard quarter tone notation is addressed in [Note names in other languages], page 8.
- Non-standard key signatures are addressed in [Key signature], page 21.
- Contemporary practises in displaying accidentals are addressed in [Automatic accidentals], page 29.

Microtonal notation

Contemporary key signatures and harmony

2.8.2 Contemporary approaches to rhythm

This section highlights issues that are relevant to the notation of rhythm in contemporary music.

References for contemporary approaches to rhythm
- Compound time signatures are addressed in [Time signature], page 72.
- Basic polymetric notation is addressed in [Polymetric notation], page 83.
- Feathered beams are addressed in [Feathered beams], page 105.
- Mensurstriche bar lines (bar lines between staves only) are addressed in [Grouping staves], page 215.

Tuplets in contemporary music

Contemporary time signatures

Extended polymetric notation

Beams in contemporary music

Bar lines in contemporary music

2.8.3 Graphical notation

Rhythmic items may be continued by a duration line, which gets represented by a DurationLine grob. Possible styles are 'beam, 'line, 'dashed-line, 'dotted-line, 'zigzag, 'trill and 'none. The duration line may end with a hook (beam-style only) or an arrow.
2.8.4 Contemporary scoring techniques

2.8.5 New instrumental techniques

2.8.6 Further reading and scores of interest

This section suggests books, musical examples and other resources useful in studying contemporary musical notation.

Scores and musical examples

### 2.9 Ancient notation

Salve, Regina, mater misericordiae: Ad te clamamus, exsuperantes, filii Hevae. Ad te suspiramus, gementes et flentes in hac larum vale.

Eia ergo, Advocata nostra, illa tuos miserobicordes

Oculos ad nos converte. Et Jesus, benedic tum fructum ventris tu-

i, nobis post hoc excitum ostende. O clemens: O pia:

O dulcis Virgo Maria.
Some notational concepts are introduced specifically for ancient notation,

- [Custodes], page 494,
- [Divisiones], page 503,
- [Ligatures], page 493.

See also

Notation Reference: [Mensural note heads], page 497, [Mensural accidentals and key signatures], page 499, [Mensural rests], page 499, [Gregorian clefs], page 502, [Mensural flags], page 498, [Mensural time signatures], page 496, [Custodes], page 494, [Divisiones], page 503, [Ligatures], page 493.

2.9.1 Overview of the supported styles

Three styles are available for typesetting Gregorian chant:

- **Editio Vaticana** is a complete style for Gregorian chant, following the appearance of the Solesmes editions, the official chant books of the Vatican since 1904. LilyPond has support for all the notational signs used in this style, including ligatures, custodes, and special signs such as the quilisma and the oriscus.

- The **Editio Medicaea** style offers certain features used in the Medicaea (or Ratisbona) editions which were used prior to the Solesmes editions. The most significant differences from the Vaticana style are the clefs, which have downward-slanted strokes, and the note heads, which are square and regular.

- The **Hufnagel** (“horseshoe nail”) or Gothic style mimics the writing style in chant manuscripts from Germany and Central Europe during the middle ages. It is named after the basic note shape (the virga), which looks like a small nail.

Three styles emulate the appearance of late-medieval and renaissance manuscripts and prints of mensural music:

- The **Mensural** style most closely resembles the writing style used in late-medieval and early renaissance manuscripts, with its small and narrow, diamond-shaped note heads and its rests which approach a hand-drawn style.

- The **Neomensural** style is a modernized and stylized version of the former: the note heads are broader and the rests are made up of straight lines. This style is particularly suited, e.g., for incipits of transcribed pieces of mensural music.

- The **Petrucci** style is named after Ottaviano Petrucci (1466-1539), the first printer to use movable type for music (in his Harmonice musices odhecaton, 1501). The style uses larger note heads than the other mensural styles.

**Baroque** and **Classical** are not complete styles but differ from the default style only in some details: certain note heads (Baroque) and the quarter rest (Classical).

Only the mensural style has alternatives for all aspects of the notation. Thus, there are no rests or flags in the Gregorian styles, since these signs are not used in plainchant notation, and the Petrucci style has no flags or accidentals of its own.

Each element of the notation can be changed independently of the others, so that one can use mensural flags, petrucci note heads, classical rests and vaticana clefs in the same piece, if one wishes.

See also

2.9.2 Ancient notation – common features

Predefined contexts

For Gregorian chant and mensural notation, there are predefined voice and staff contexts available, which set all the various notation signs to values suitable for these styles. If one is satisfied with these defaults, one can proceed directly with note entry without worrying about the details on how to customize a context. See one of the predefined contexts VaticanaVoice, VaticanaStaff, MensuralVoice, MensuralStaff, KievanVoice, and KievanStaff.

See also

Notation Reference: [Gregorian chant contexts], page 502, [Mensural contexts], page 495, [Kievan contexts], page 511.

Ligatures

A ligature is a graphical symbol that represents at least two distinct notes. Ligatures originally appeared in the manuscripts of Gregorian chant notation to denote ascending or descending sequences of notes on the same syllable. They are also used in mensural notation.

Ligatures are entered by enclosing them in \[ and \]. Some ligature styles may need additional input syntax specific for this particular type of ligature. By default, the LigatureBracket engraver just puts a square bracket above the ligature.

\relative {
  \[ g' c, a' f d' \]
  a g f
  \[ e f a g \]
}

Three other ligature styles are available: ‘Vaticana’ for Gregorian chant, ‘Mensural’ for mensural music (only white mensural ligatures are supported for mensural music, and with certain limitations), and ‘Kievan’ for Kievan melismata. To use any of these styles, the default Ligature_bracket_engraver has to be replaced with one of the specialized ligature engravers in the Voice context. For more information, see [White mensural ligatures], page 500, [Gregorian square neume ligatures], page 505, and [Kievan melismata], page 513.

See also

Notation Reference: [White mensural ligatures], page 500, [Gregorian square neume ligatures], page 505.

Known issues and warnings

Spacing required for ligatures is not currently implemented and, as a result, there may end up being too much space between them. Line breaking may also be unsatisfactory.

Lyrics might not align as expected when using ligatures.

Accidentals must not be printed within a ligature, but instead be collected and printed in front of it.

The syntax still uses the deprecated “infix” style \[ music expr \]. For consistency reasons, it will eventually be changed to “postfix” style note\[ ... note\].
Custodes

A custos (plural: custodes; Latin word for "guard") is a symbol that appears at the end of a staff. It anticipates the pitch of the first note of the following line, thus helping the performer to manage line breaks during performance.

Custodes were frequently used in music notation until the seventeenth century. Nowadays, they have survived only in a few particular forms of musical notation such as contemporary editions of Gregorian chant like the Editio Vaticana. There are different custos glyphs used in different flavors of notational style.

For typesetting custodes, just put a Custos_engraver into the Staff context when declaring the \layout block, and change the style of the custos with an \override if desired, as shown in the following example:

\score {
    \relative {a'1 \break g}
    \layout {
        \context {
            \Staff {
                \consists Custos_engraver
                \override Custos.style = #'mensural
            }
        }
    }
}

\new \Lyrics \lyricmode {
\markup {
    \column {\typewriter "vaticana " \line { " " \musicglyph "custodes.vaticana.u0" }}
}
\markup {
    \column {\typewriter "medicaea " \line { " " \musicglyph "custodes.medicaea.u0" }}
}
\markup {
    \column {\typewriter "hufnagel " \line { " " \musicglyph "custodes.hufnagel.u0" }}
}
\markup {
    \column {\typewriter "mensural " \line { " " \musicglyph "custodes.mensural.u0" }}
}

The custos glyph is selected by the style property. The styles supported are vaticana, medicaea, hufnagel, and mensural.

Internals Reference: Section “Custos” in Internals Reference.

### 2.9.3 Typesetting mensural music

#### Mensural contexts

The predefined \texttt{MensuralVoice} and \texttt{MensuralStaff} contexts can be used to engrave a piece in mensural style. These contexts initialize all relevant context properties and grob properties to proper values, so you can immediately go ahead entering the chant, as the following excerpt demonstrates:

\begin{verbatim}
\score {
  \new MensuralVoice = "discantus" \relative {
    \hide Score.BarNumber {
      c'\'\melisma bes a g\melismaEnd
      f\breve
      [\f\melisma a c\breve d\melismaEnd ]
      c\longa
      c\breve\melisma a1 g\melismaEnd
      fis\longa\signumcongruentiae
    }
  }
  \new Lyrics \lyricsto "discantus" { San -- ctus, San -- ctus, San -- ctus }
} >>
\end{verbatim}

See also

### Mensural clefs

Mensural clefs are supported using the \texttt{\clef} command. Some of the clefs use the same glyph, but differ only with respect to the line they are printed on. In such cases, a trailing number in the name is used to enumerate these clefs, numbered from the lowest to the highest line.
\override NoteHead.style = #'vaticana.punctum
\clef "vaticana-do1"
c'1

\override NoteHead.style = #'medicaea.punctum
\clef "medicaea-do3"
c'1

\override NoteHead.style = #'hufnagel.punctum
\clef "hufnagel-fa2"
c'1

\override NoteHead.style = #'neomensural
\clef "neomensural-c4"
c'1

It is possible to manually force a clef glyph to be typeset on an arbitrary line, as described in [Clef], page 17. For the complete range of possible clefs see Section A.11 [Clef styles], page 751.

See also

Notation Reference: [Gregorian clefs], page 502, [Clef], page 17.

Installed Files: scm/parser-clef.scm.

Snippets: Section “Pitches” in Snippets.

Internals Reference: Section “Clef_engraver” in Internals Reference, Section “Clef” in Internals Reference, Section “ClefModifier” in Internals Reference, Section “clef-interface” in Internals Reference.

Known issues and warnings
The Mensural g clef is mapped to the Petrucci g clef.

Mensural time signatures
There is limited support for mensuration signs (which are similar to, but not exactly the same as time signatures). The glyphs are hard-wired to particular time fractions. In other words, to get a particular mensuration sign with the \time n/m command, n and m have to be chosen according to the following table

\time 4/4 \time 2/2 \time 6/4 \time 6/8
\C\C\C\C

\time 3/2 \time 3/4 \time 9/4 \time 9/8
\O\O\O\O
Use the style property of grob TimeSignature to select ancient time signatures. Supported styles are neomensural and mensural. The above table uses the neomensural style. The following examples show the differences in style:

![Time signature](image)

[Time signature], page 72, gives a general introduction to the use of time signatures.

**See also**

Notation Reference: [Time signature], page 72.

**Known issues and warnings**

Ratios of note durations cannot change with the time signature, as those are not constant. For example, the ratio of 1 breve = 3 semibreves (tempus perfectum) can be made by hand, by setting

```plaintext
breveTP = #(ly:make-duration -1 0 3/2)
```

```plaintext
{ c\breveTP f1 }
```

This sets breveTP to \(3/2 \times 2 = 3\) times a whole note.

The mensural68alt and neomensural68alt symbols (alternate symbols for 6/8) are not addressable with \time. Use \markup {\musicglyph "timesig.mensural68alt" } instead.

**Mensural note heads**

For ancient notation, a note head style other than the default style may be chosen. This is accomplished by setting the style property of the NoteHead object to baroque, neomensural, mensural, petrucci, blackpetrucci or semipetrucci.

- The baroque style differs from the default style by:
  - Providing a maxima note head, and
  - Using a square shape for \breve note heads.

- The neomensural, mensural, and petrucci styles differ from the baroque style by:
  - Using rhomboidal heads for semibreves and all smaller durations, and
  - Centering the stems on the note heads.

- The blackpetrucci style produces note heads usable in black mensural notation or coloratio sections in white mensural notation. Because note head style does not influence flag count, in this style a semiminima should be notated as a\(8\times2\), not a4, otherwise it will look like a minima. The multiplier can be different if coloratio is used, e.g., to notate triplets.

Use semipetrucci style to draw half-colored note heads (breves, longas and maximas).

The following example demonstrates the petrucci style:

\compressEmptyMeasures
Section A.9 [Note head styles], page 749, gives an overview of all available note head styles.

**See also**

Notation Reference: Section A.9 [Note head styles], page 749.

**Mensural flags**

Use the flag-style property of grob Stem to select ancient flags. Besides the default flag style, only the mensural style is supported.

```
\relative c' {
    \override Flag.style = #'mensural
    \override Stem.thickness = #1.0
    \override NoteHead.style = #'mensural
    \autoBeamOff
    c8 d e f c16 d e f c32 d e f s8
    c'8 d e f c16 d e f c32 d e f
}
```

Note that the innermost flare of each mensural flag is vertically aligned with a staff line. There is no particular flag style for neo-mensural or Petrucci notation. There are no flags in Gregorian chant notation.

**See also**

**Known issues and warnings**

Vertically aligning each flag with a staff line assumes that stems always end either exactly on or exactly in the middle of two staff lines. This may not always be true when using advanced layout features of classical notation (which however are typically out of scope for mensural notation).
Chapter 2: Specialist notation

Mensural rests
Use the style property of grob Rest to select ancient rests. Supported ancient styles are neomensural, and mensural.

The following example demonstrates these styles:

\compressEmptyMeasures
\override Rest.style = #'mensural
r\longa^"mensural" r\breve r1 r2 r4 r8 r16 s \break
\override Rest.style = #'neomensural
r\longa^"neomensural" r\breve r1 r2 r4 r8 r16

There are no 32nd and 64th rests specifically for the mensural or neo-mensural styles. Rests from the default style are used.

See also
Notation Reference: [Rests], page 61.
Snippets: Section “Ancient notation” in Snippets.

Known issues and warnings
The glyph for the maxima rest in mensural style is actually a perfect longa rest; use two (or three) longa rests to print a maxima rest. Longa rests are not grouped automatically, so have to be done manually by using pitched rests.

Mensural accidentals and key signatures
The mensural style provides a sharp and a flat sign different from the default style. Mensural notation rarely used a natural sign: instead the appropriate sharp or flat is used. For example, a B natural in the key of F major would be indicated with a sharp. However, if specifically called for, the natural sign is taken from the vaticana style.

mensural
\b x

The way to use this style is covered in [Alternate accidental glyphs], page 36. It is the default in the MensuralStaff context.

See also

Notation Reference: Section 1.1 [Pitches], page 1, [Accidentals], page 6, [Automatic accidentals], page 29, [Alternate accidental glyphs], page 36, Section A.10 [Accidental glyph sets], page 750, [Key signature], page 21.

Internals Reference: Section “KeySignature” in Internals Reference.
Annotational accidentals (*musica ficta*)

In European music from before about 1600, singers were expected to chromatically alter notes at their own initiative according to certain rules. This is called *musica ficta*. In modern transcriptions, these accidentals are usually printed over the note.

Support for such suggested accidentals is included, and can be switched on by setting `suggestAccidentals` to true.

```latex
\relative {
  fis' gis
  \set suggestAccidentals = ##t
  ais bis
}
```

This will treat every subsequent accidental as *musica ficta* until it is unset with `\set suggestAccidentals = ##f`. A more practical way is to use `\once \set suggestAccidentals = ##t`, which can even be defined as a convenient shorthand:

```latex
ficta = { \once \set suggestAccidentals = ##t }
```

```latex
\score { \relative
  \new MensuralVoice {\once \set suggestAccidentals = ##t
    bes'4 a2 g2 \ficta fis8 \ficta e! fis2 g1
  }
}
```

See also

Internals Reference: Section “Accidental_engraver” in Internals Reference, Section “AccidentalSuggestion” in Internals Reference.

White mensural ligatures

There is limited support for white mensural ligatures.

To engrave white mensural ligatures, in the layout block, replace the `Ligature_bracket_engraver` with the `Mensural_ligature_engraver` in the `Voice` context:

```latex
\layout {
  \context {\
    \Voice
    \remove Ligature_bracket_engraver
    \consists Mensural_ligature_engraver
  }
}
```

There is no additional input language to describe the shape of a white mensural ligature. The shape is rather determined solely from the pitch and duration of the enclosed notes. While this approach may take a new user a while to get accustomed to, it has the great advantage that the full musical information of the ligature is known internally. This is not only required for correct MIDI output, but also allows for automatic transcription of the ligatures.
At certain places two consecutive notes can be represented either as two squares or as an oblique parallelogram (flexa shape). In such cases the default is the two squares, but a flexa can be required by setting the ligature-flexa property of the second note head. The length of a flexa can be set by the note head property flexa-width.

For example,
\begin{verbatim}
\score {
  \relative {
    \set Score.timing = ##f
    \set Score.measureBarType = '#()
    \override NoteHead.style = #'petrucci
    \override Staff.TimeSignature.style = #'mensural
    \clef "petrucci-g"
    \[ c''\maxima g \]
    \[ d'\longa \]
    \override NoteHead.ligature-flexa = ##t
    \once \override NoteHead.flexa-width = #3.2
    c\breve f e d
    \[ c\maxima d\longa \]
    \[ e1 a, g\breve \]
  }
  \layout {
    \context {
      \Voice
      \remove Ligature_bracket_engraver
      \consists Mensural_ligature_engraver
    }
  }
}
\end{verbatim}

Without replacing Ligature_bracket_engraver with Mensural_ligature_engraver, the same music looks as follows:

See also

Notation Reference: [Gregorian square neume ligatures], page 505, [Ligatures], page 493.

Known issues and warnings

Horizontal spacing of ligatures may be poor. Accidentals may collide with previous notes.

2.9.4 Typesetting Gregorian chant

When typesetting a piece in Gregorian chant notation, the Vaticana_ligature_engraver automatically selects the proper note heads, so there is no need to explicitly set the note head style. Still, the note head style can be set, e.g., to vaticana_punctum to produce punctum neumes. Similarly, the Mensural_ligature_engraver automatically assembles mensural ligatures.
Chapter 2: Specialist notation

See also
   Notation Reference: [White mensural ligatures], page 500, [Ligatures], page 493.

Gregorian chant contexts
The predefined contexts VaticanaVoice, VaticanaStaff, and VaticanaLyrics can be used to engrave a piece of Gregorian chant in the style of the Editio Vaticana. These contexts initialize all relevant context and grob properties to proper values; you can immediately go ahead entering the chant, as the following excerpt demonstrates.

\include "gregorian.ly"
\score { <<
   \new VaticanaVoice = "cantus" {
      \[ c'\melisma c' \flexa a \] 
      \[ a \flexa \deminutum g\melismaEnd \] 
      f \divisioMinima 
      \[ f\melisma \pes a c' c' \pes d'\melismaEnd \] 
      c' \divisioMinima \break 
      \[ c'\melisma c' \flexa a \] 
      \[ a \flexa \deminutum g\melismaEnd \] f \divisioMinima 
   }

   \new VaticanaLyrics \lyricsto "cantus" {
      San -- ctus, San -- ctus, San -- ctus 
   }
>> }

Sanctus, Sanctus,

San ctus

Gregorian clefs
The following table shows all Gregorian clefs that are supported via the \clef command. Some of the clefs use the same glyph, but differ only with respect to the line they are printed on. In such cases, a trailing number in the name is used to enumerate these clefs, numbered from the lowest to the highest line. Still, you can manually force a clef glyph to be typeset on an arbitrary line, as described in [Clef], page 17. The note printed to the right side of each clef in the example column denotes the c’ with respect to that clef.

<table>
<thead>
<tr>
<th>Description</th>
<th>Supported Clefs</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Editio Vaticana style do clef</td>
<td>vaticana-do1, vaticana-do2,</td>
<td><img src="image1.png" alt="Example" /></td>
</tr>
<tr>
<td></td>
<td>vaticana-do3</td>
<td></td>
</tr>
<tr>
<td>Editio Vaticana style fa clef</td>
<td>vaticana-fa1, vaticana-fa2</td>
<td><img src="image2.png" alt="Example" /></td>
</tr>
</tbody>
</table>
Chapter 2: Specialist notation

Editio Medicaea style do clef  medicaea-do1, medicaea-do2, medicaea-do3

Editio Medicaea style fa clef  medicaea-fa1, medicaea-fa2

Hufnagel style do clef  hufnagel-do1, hufnagel-do2, hufnagel-do3

Hufnagel style fa clef  hufnagel-fa1, hufnagel-fa2

Hufnagel style combined do/fa clef  hufnagel-do-fa

See also
Notation Reference: [Clef], page 17.

Gregorian accidentals and key signatures
Accidentals for the three different Gregorian styles are available:

\begin{itemize}
\item vaticana
\item medicaea
\item hufnagel
\end{itemize}

As shown, not all accidentals are supported by each style. When trying to access an unsupported accidental, LilyPond will switch to a different style.

How to switch between styles is covered in [Alternate accidental glyphs], page 36.

See also
Notation Reference: Section 1.1 [Pitches], page 1, [Accidentals], page 6, [Automatic accidentals], page 29, [Alternate accidental glyphs], page 36, [Key signature], page 21.
Internals Reference: Section “KeySignature” in Internals Reference.

Divisiones
There are no rests in Gregorian chant notation; instead, it uses [Divisiones], page 503.

A divisio (plural: divisiones; Latin word for ‘division’) is a staff-context symbol indicating the phrase and section structure of Gregorian music. The musical meaning of divisio minima, divisio maior, and divisio maxima can be characterized as short, medium, and long pause. The finalis sign not only marks the end of a chant, but is also frequently used within a single antiphonal/responsorial chant to mark the end of each section.

To use divisiones, include the file gregorian.ly. It contains definitions that you can apply by just inserting \divisioMinima, \divisioMaior, \divisioMaxima, and \finalis at proper places in the input. Some editions use virgula or caesura instead of divisio minima; therefore, gregorian.ly also defines \virgula, and the predefined staff contexts for Gregorian chant configure \caesura to produce an ancient caesura mark.

\begin{itemize}
\item divisio minima
\item divisio maior
\item divisio maxima
\end{itemize}
Chapter 2: Specialist notation

Predefined commands

\virgula, \caesura, \divisioMinima, \divisioMaior, \divisioMaxima, \finalis.

See also

Notation Reference: [Breath marks], page 154.
Installed Files: 1y/gregorian.ly.

Gregorian articulation signs

In addition to the standard articulation signs described in section [Articulations and ornamentations], page 137, articulation signs specifically designed for use with notation in Editio Vaticana style are provided.

\include "gregorian.ly"
\score {
\new VaticanaVoice {
\override Script.padding = #-0.1
\ictus _"ictus " \break
\circulus _"circulus " \break
\semicirculus _"semicirculus " \break
\accentus _"accentus " \break
[ a _"episema " \episemInitium \pes b
\flexa a b \episemFinis \flexa a \]
}

\ictus
\circulus
\semicirculus
\accentus
\episema

See also

Notation Reference: [Articulations and ornamentations], page 137.
Snippets: Section “Ancient notation” in Snippets.
**Known issues and warnings**

Some articulations are vertically placed too closely to the corresponding note heads.

**Augmentum dots (morae)**

Augmentum dots, also called *morae*, are added with the music function \(\texttt{\textbackslash augmentum}\). Note that \(\texttt{\textbackslash augmentum}\) is implemented as a unary music function rather than as head prefix. It applies to the immediately following music expression only. That is, \(\texttt{\textbackslash augmentum \texttt{\textbackslash virga} c}\) will have no visible effect. Instead, say \(\texttt{\textbackslash virga \texttt{\textbackslash augmentum} c}\) or \(\texttt{\textbackslash augmentum \{\texttt{\textbackslash virga} c\}}\). Also note that you can say \(\texttt{\textbackslash augmentum \{a g\}}\) as a shortcut for \(\texttt{\textbackslash augmentum a \texttt{\textbackslash augmentum} g}\).

```latex
\include "gregorian.ly"
\score {
  \new VaticanaVoice {
    \[ \texttt{\textbackslash augmentum} a \texttt{\textbackslash flexa} \texttt{\textbackslash augmentum} g \]
    \texttt{\textbackslash augmentum} g
  }
}
```

See also

Notation Reference: [Breath marks], page 154.
Internals Reference: Section “Divisio” in Internals Reference.
Snippets: Section “Ancient notation” in Snippets.

**Gregorian square neume ligatures**

There is limited support for Gregorian square neumes notation (following the style of the Editio Vaticana). Core ligatures can already be typeset, but essential issues for serious typesetting are still lacking, such as (among others) horizontal alignment of multiple ligatures, lyrics alignment, and proper handling of accidentals.

The support for Gregorian neumes is enabled by \(\texttt{\include}\)ing gregorian.ly at the beginning of the file. This makes available a number of extra commands to produce the neume symbols used in plainchant notation.

Note heads can be modified and/or joined.

- The shape of the note head can be modified by *prefixing* the note name with any of the following commands: \(\texttt{\textbackslash virga}, \texttt{\textbackslash stroph\alpha}, \texttt{\textbackslash inclinatum}, \texttt{\textbackslash auctum}, \texttt{\textbackslash descendens}, \texttt{\textbackslash ascendens}, \texttt{\textbackslash oriscus}, \texttt{\textbackslash quilisma}, \texttt{\textbackslash diminutum}, \texttt{\textbackslash cavum}, \texttt{\textbackslash linea}\).
- Ligatures, properly speaking (i.e., notes joined together), are produced by placing one of the joining commands \(\texttt{\textbackslash pes}\) or \(\texttt{\textbackslash flexa}\), for upwards and downwards movement, respectively, *between* the notes to be joined.

A note name without any qualifiers will produce a *punctum*. All other neumes, including the single-note neumes with a different shape such as the *virga*, are in principle considered as ligatures and should therefore be placed between \[\ldots\].

**Single-note neumes**

- The *punctum* is the basic note shape (in the Vaticana style: a square with some curvation for typographical finesse). In addition to the regular *punctum*, there is also the oblique *punctum inclinatum*, produced with the prefix *inclinatum*. The regular *punctum* can be modified with *cavum*, which produces a hollow note, and *linea*, which draws vertical lines on either side of the note.
• The *virga* has a descending stem on the right side. It is produced by the modifier `\virga`.

**Ligatures**

Unlike most other neumes notation systems, the typographical appearance of ligatures is not directly dictated by the input commands, but follows certain conventions dependent on musical meaning. For example, a three-note ligature with the musical shape low-high-low, such as `\[ a \pes b \flexa g \]`, produces a Torculus consisting of three Punctum heads, while the shape high-low-high, such as `\[ a \flexa g \pes b \]`, produces a Porrectus with a curved flexa shape and only a single Punctum head. There is no command to explicitly typeset the curved flexa shape; the decision of when to typeset a curved flexa shape is based on the musical input. The idea of this approach is to separate the musical aspects of the input from the notation style of the output. This way, the same input can be reused to typeset the same music in a different style of Gregorian chant notation.

**Liquescent neumes**

Another main category of notes in Gregorian chant is the so-called liquezent neumes. They are used under certain circumstances at the end of a syllable which ends in a ‘liquezent’ letter, i.e., the sounding consonants that can hold a tone (the nasals, l, r, v, j, and their diphthong equivalents). Thus, the liquezent neumes are never used alone (although some of them can be produced), and they always fall at the end of a ligature.

Liquescent neumes are represented graphically in two different, more or less interchangeable ways: with a smaller note or by ‘twisting’ the main note upwards or downwards. The first is produced by making a regular `\pes` or `\flexa` and modifying the shape of the second note: `\[ a \pes \deminutum b \]`, the second by modifying the shape of a single-note neume with `\auctum` and one of the direction markers `\descendens` or `\ascendens`, e.g., `\[ \auctum \descendens a \]`.

**Special signs**

A third category of signs is made up of a small number of signs with a special meaning (which, incidentally, in most cases is only vaguely known): the *quilisma*, the *oriscus*, and the *strophicus*. These are all produced by prefixing a note name with the corresponding modifier, `\quilisma`, `\oriscus`, or `\strophicus`.

Virtually, within the ligature delimiters `\[` and `\]`, any number of heads may be accumulated to form a single ligature, and head prefixes like `\pes`, `\flexa`, `\virga`, `\inclinatum`, etc., may be mixed in as desired. The use of the set of rules that underlies the construction of the ligatures in the above table is accordingly extrapolated. This way, infinitely many different ligatures can be created.

Note that the use of these signs in the music itself follows certain rules, which are not checked by LilyPond. E.g., the *quilisma* is always the middle note of an ascending ligature, and usually falls on a half-tone step, but it is perfectly possible, although incorrect, to make a single-note quilisma.

In addition to the note signs, *gregorian.ly* also defines the commands `\versus`, `\responsum`, `\ij`, `\iiij`, `\IJ`, and `\IIIJ`, that will produce the corresponding characters, e.g., for use in lyrics, as section markers, etc. These commands use special Unicode characters and will only work if a font is used which supports them.

The following table shows a limited, but still representative pool of Gregorian ligatures, together with the code fragments that produce the ligatures. The table is based on the extended neumes table of the 2nd volume of the Antiphonale Romanum (*Liber Hymnarius*), published 1983 by the monks of Solesmes. The first column gives the name of the ligature, with the main form in boldface and the liquezent forms in italics. The third column shows the code fragment that produces this ligature, using `g`, `a`, and `b` as example pitches.

Bistropha

\[ \text{stropha b stropha b} \]

Tristropha

\[ \text{stropha b stropha b stropha b} \]

Trigonus

\[ \text{stropha b stropha b stropha a} \]

Predefined commands

The following head prefixes are supported: \text{\text{virga, stropha, inclinatum, auctum, descendens, ascendens, oriscus, quilisma, deminutum, cavum, linea.}}
Head prefixes can be accumulated, though restrictions apply. For example, either `\descendens` or `\ascendens` can be applied to a head, but not both to the same head.

Two adjacent heads can be tied together with the `\pes` and `\flexa` infix commands for a rising and falling line of melody, respectively.

Use the unary music function `\augmentum` to add augmentum dots.

**See also**

Notation Reference: [Gregorian square neume ligatures], page 505, [White mensural ligatures], page 500, [Ligatures], page 493.

**Known issues and warnings**

When an `\augmentum` dot appears at the end of the last staff within a ligature, it is sometimes vertically placed wrong. As a workaround, add an additional skip note (e.g., s8) as last note of the staff.

`\augmentum` should be implemented as a head prefix rather than a unary music function, such that `\augmentum` can be intermixed with head prefixes in arbitrary order.

### 2.9.5 Typesetting Kievan square notation

**Kievan contexts**

As with Mensural and Gregorian notation, the predefined KievanVoice and KievanStaff contexts can be used to engrave a piece in square notation. These contexts initialize all relevant context properties and grob properties to proper values, so you can immediately go ahead entering the chant:

```latex
% Font settings for Cyrillic
\paper {  
  #(define fonts  
    (set-global-fonts  
      #:roman "Linux Libertine O,serif"
    ))  
}  

\score {  
  <<  
  \new KievanVoice = "melody" \relative c' {  
    \cadenzaOn  
    c4 c c c c2 b\longa  
    \fine  
  }  
  \new Lyrics \lyricsto "melody" {  
    Го -- спо -- ми по -- ми -- луй.  
  }  
  >>  
}  

Господи помилуй.
```
See also

**Known issues and warnings**

LilyPond supports Kievan notation of the Synodal style, as used in the corpus of chantbooks printed by the Russian Holy Synod in the 1910’s and recently reprinted by the Moscow Patriarchate Publishing House. LilyPond does not support the older (less common) forms of Kievan notation that were used in Galicia to notate Rusyn plainchant.

**Kievan clefs**

There is only one clef used in Kievan notation (the Tse-fa-ut Clef). It is used to indicate the position of c:

\[\text{\texttt{\clef "kievan-do"}}\]
\[\text{\texttt{\kievanOn}}\]
\[\text{\texttt{c'}}\]

See also

Notation Reference: [Clef], page 17.

**Kievan notes**

For Kievan square notation, the appropriate note head style needs to be chosen and the flags and stems need to be turned off. This is accomplished by calling the \texttt{\kievanOn} function, which sets the appropriate properties of the note head, stems, and flags. Once Kievan note heads are not needed, these properties can be reverted by calling the \texttt{\kievanOff} function.

The Kievan final note, which usually comes at the end of a piece of music, may be selected by setting the duration to \texttt{\longa}. The Kievan recitative mark, used to indicate the chanting of several syllables on one note, may be selected by setting the duration to \texttt{\breve}. The following example demonstrates the various Kievan note heads:

\[\text{\texttt{\autoBeamOff}}\]
\[\text{\texttt{\cadenzaOn}}\]
\[\text{\texttt{\kievanOn}}\]
\[\text{\texttt{b'1 b'2 b'4 b'8 b'\breve b'\longa}}\]
\[\text{\texttt{\kievanOff}}\]
\[\text{\texttt{b'2}}\]

See also

Notation Reference: Section A.9 [Note head styles], page 749.
Known issues and warnings

LilyPond automatically determines if the stem up or stem down form of a note is drawn. When setting chant in square notation, however, it is customary to have the stems point in the same direction within a single melisma. This can be done manually by setting the direction property of the Stem object.

Kievan accidentals

The kievan style provides a sharp and a flat sign different from the default style. There is no natural sign in Kievan notation. The sharp sign is not used in Synodal music but may occur in earlier manuscripts. It has been included primarily for the sake of compatibility.

\clef "kievan-do"
\set Staff.alterationGlyphs =
    #alteration-kievan-glyph-name-alist
    bes' dis'

See also

Notation Reference: [Accidentals], page 6, [Automatic accidentals], page 29, [Alternate accidental glyphs], page 36, Section A.8 [The Emmentaler font], page 735.

Kievan bar lines

In a KievanStaff, there are no measures, but the \caesura command creates a phrase bar line, and the \section and \fine commands create a special section bar line.

\new KievanStaff {
    c'4 4 4 4 4 4 \caesura \ % \bar "_" 
    d'4 4 4 4 4 4 \section \ % \bar "k"
    e'4 4 4 4 4 4 \fine
}

See also

Notation Reference: Section 1.2.5 [Bars], page 106, Section A.8 [The Emmentaler font], page 735.

Kievan melismata

Notes within a Kievan melisma are usually placed close to each other and the melismata separated by whitespace. This is done to allow the chanter to quickly identify the melodic structures of Znamenny chant. In LilyPond, melismata are treated as ligatures and the spacing is implemented by the Kievan_ligature_engraver.

When the KievanVoice and KievanStaff contexts are used, the Kievan_ligature_engraver is enabled by default. In other contexts, it can be invoked by replacing the Ligature_bracket_engraver with the Kievan_ligature_engraver in the layout block:

\layout {

The spacing between the notes within a Kievan ligature can be controlled by setting the padding property of the KievanLigature.

The following example demonstrates the use of Kievan ligatures:

\context {  
\Voice  
\remove Ligature_bracket_engraver  
\consists Kievan_ligature_engraver  
}  

\score {  
<< 
\new KievanVoice = "melody" \relative c' {  
\cadenzaOn  
e2 \[ e4( d4 ) \] \[ c4( d e d ) \] e1 \fine  
}  
\new Lyrics \lyricsto "melody" {  
Га -- врі -- и -- лу  
}  
>>  
}

Га - врі - и - лу

See also

Notation Reference: [White mensural ligatures], page 500, [Gregorian square neume ligatures], page 505, [Ligatures], page 493.

Known issues and warnings
Horizontal spacing of ligatures is poor.

2.9.6 Working with ancient music – scenarios and solutions
Working with ancient music frequently involves particular tasks which differ considerably from the modern notation for which LilyPond is designed. In the rest of this section, a number of typical scenarios are outlined, with suggestions of solutions. These involve:

- how to make incipits (i.e., prefatory material to indicate what the original has looked like) to modern transcriptions of mensural music;
- how to achieve the Mensurstriche layout frequently used for modern transcriptions of polyphonic music;
- how to transcribe Gregorian chant in modern notation;
• how to generate both ancient and modern notation from the same source.

Incipits

It is customary when transcribing mensural music into modern notation to place an indication of how the initial rests and note or notes of the original version appeared – including the original clefs. This is called an incipit. The \incipit command uses the indent of the main staff to set the width occupied by the incipit, and incipit-width to set the width of the incipit staff.

\score {
  \new Staff <<
    \new Voice = Tenor {
      \set Staff.instrumentName = "Tenor"
      \override Staff.InstrumentName.self-alignment-X = #RIGHT
      \incipit { \clef "mensural-c4" \key f \major r\breve r1 c'1 }
      \clef "treble_8"
      \key f \major
      R1 r2 c'2 |
      a4. c'8
    }
  \new Lyrics \lyricsto Tenor { Cyn -- thia your }
  \layout {
    \indent = 5\cm
    \incipit-width = 3\cm
  }
}

Known issues and warnings

Note that instrumentName must be set in the music for the incipit to be produced. If no instrument name is required then use \set Staff.instrumentName = "".

Mensurstriche layout

*Mensurstriche* (‘mensuration lines’) is the accepted term for bar lines that are drawn between the staves of a system but not through the staves themselves. It is a common way to preserve the rhythmic appearance of the original, i.e., not having to break syncopated notes at bar lines, while still providing the orientation aids that bar lines give.

*Mensurstriche*, bar lines between but not through staves, can be printed by setting measureBarType to "-span!" and using a grouping context that allows span bars, such as StaffGroup.

\layout {
  \context {
    \Staff
      measureBarType = "-span!"
  }
}
Transcribing Gregorian chant

Gregorian chant can be transcribed into modern notation with a number of simple tweaks.

**Stems.** The GregorianTranscriptionVoice context does not create stems. You can extend this behavior to other contexts by removing Stem_engraver:

```latex
\layout {
  ...
  \context {
    \Voice
    \remove Stem_engraver
  }
}
```

**Timing.** For unmetered chant, there are several alternatives. The Time_signature_engraver can be removed from the Staff context without any negative side effects. The alternative, to make it transparent, will leave an empty space in the score, since the invisible signature will still take up space.

In many cases, \set Score.timing = ##f will give good results. An alternative is to use \cadenzaOn and \cadenzaOff.

The predefined staff contexts for ancient music do not create measure bar lines. You can extend this behavior to all other contexts with \set Score.measureBarType = #'() or to particular staves with \set Staff.measureBarType = #'().

The predefined staff contexts for ancient music allow line breaks without bar lines. You can extend this behavior to all other contexts with \set Score.forbidBreakBetweenBarLines = ##f or to particular staves with \set Staff.forbidBreakBetweenBarLines = ##f.

A common type of transcription is recitativic chant where the repeated notes are indicated with a single breve. The text to the recitation tone can be dealt with in two different ways: either set as a single, left-aligned syllable:

```latex
\include "gregorian.ly"
chant = \relative {
  \clef "G_8"
  c'\brev e c4 a  c2 c4 \divisioMaior
  c\brev e c4 c f, f \finalis
}
```
This works fine, as long as the text doesn’t span a line break. If that is the case, an alternative is to add hidden notes to the score, as below.

In some transcription styles, stems are used occasionally, for example to indicate the transition from a single-tone recitative to a fixed melodic gesture. In these cases, one can use the \omit Stem and manually \undob \omit Stem.

\include "gregorian.ly"

chant = \relative {
  \clef "G_8"
  \set Score.timing = ##f
  \omit Stem
c'\breve \hide NoteHead c c c c c
do \hide NoteHead
  \undob \omit Stem \stemUp c4 b4 a
  \omit Stem c2 c4 \divisioMaio
  c\breve \hide NoteHead c c c c c c c
do \hide NoteHead c4 c f, f \finalis
}

verba = \lyricmode {
  Noctem quietam et finem perfectum concedat nobis Dominus omnipo-

  tens.
}

\score {
  \new GregorianTranscriptionStaff <<
  \new GregorianTranscriptionVoice = "melody" {
    \chant
  }
  \new GregorianTranscriptionLyrics = "one" {
    \lyricsto "melody" \verba
  }
}
Another common situation is transcription of neumatic or melismatic chants, i.e., chants with a varying number of notes to each syllable. In this case, one would want to set the syllable groups clearly apart, usually also the subdivisions of a longer melisma. One way to achieve this is to use a fixed \time, e.g., 1/4, and let each syllable or note group fill one of these measures, with the help of tuplets or shorter durations. If the bar lines and all other rhythmical indications are made transparent, and the space around the bar lines is increased, this will give a fairly good representation in modern notation of the original.

To avoid that syllables of different width (such as “-ri” and “-rum”) spread the syllable note groups unevenly apart, the X-extent property of the LyricText object may be set to a fixed value. Another, more cumbersome way would be to add the syllables as \markup elements. If further adjustments are necessary, this can be easily done with a ‘notes’.

\new \relative {\time 1/4
  \override Lyrics.LyricText.X-extent = #'(0 . 3)
  d'4 \tuplet 3/2 { f8 a g } g a a4 g f8 e
  d4 f8 g g8 d f g a g f4 g8 a a4 s
  \tuplet 3/2 { g8 f d } e f g a g4
}\n
\spiritus = \relative {
  \override Lyrics.LyricText.X-extent = #'(0 . 3)
  d'4 \tuplet 3/2 { f8 a g } g a a4 g f8 e
  d4 f8 g g8 d f g a g f4 g8 a a4 s
  \tuplet 3/2 { g8 f d } e f g a g4
}\n
\spirLyr = \lyricmode {
  Spi -- ri -- _ _ tus _ Do -- mi -- ni _ re -- ple -- _ vit _
or -- _ bem _ ter -- ra -- _ rum, al -- _ le -- _ lu
  -- _ ia.
}\n
\score {
  \new \GregorianTranscriptionStaff <<<
  \new \GregorianTranscriptionVoice = "chant" {
    \spiritus
  }
}
Using tags to produce mensural and modern music from the same source

Using tags, it is possible to produce both mensural and modern notation from the same music. In this snippet, a function \texttt{menrest} is introduced, allowing mensural rests to be pitched as in the original, but with modern rests in the standard staff position. Tags can also be used where other differences are needed: for example using “whole measure rests” (\texttt{R1}, \texttt{R\breve{}}, etc.) in modern music, but normal rests (\texttt{r1}, \texttt{r\breve{}}), etc.) in the mensural version. Converting mensural music to its modern equivalent is usually referred to as “transcription”.

\begin{verbatim}
menrest = #(define-music-function (note)
(ly:music?)
#{
 \tag #'mens $(make-music 'RestEvent note)
 \tag #'mod $(make-music 'RestEvent note 'pitch '())
#})

MenStyle = {
 \autoBeamOff
 \override NoteHead.style = #'petrucci
 \override Score.BarNumber.transparent = ##t
 \override Stem.neutral-direction = #up
}

finalis = \section
\end{verbatim}
Music = \relative c' { 
\set Score.tempoHideNote = ##t
\key f \major
\time 4/4
g1 d'2 \menrest bes4 bes2 a2 r4 g4 fis2.
\finalis
}

MenLyr = \lyricmode { So farre, deere life, deare life }
ModLyr = \lyricmode { So far, dear life, dear life }

So far, dear life, dear life
2.10 World music

The purpose of this section is to highlight musical notation issues that are relevant to traditions outside the Western tradition.

2.10.1 Common notation for non-Western music

This section discusses how to enter and print music scores that do not belong to the Western classical tradition, also referred to as Common Practice Period.

Extending notation and tuning systems

Standard classical notation (also known as Common Practice Period notation) is commonly used in all sorts of music, not limited to 'classical' Western music. This notation is discussed in Section 1.1.1 [Writing pitches], page 1, and the various note names that may be used are explained in [Note names in other languages], page 8.

Some types of non-Western music and folk/traditional music often employ alternative or extended tuning systems that do not fit easily into standard, classical notation.

Standard notation is still used but with pitch differences being implicit. For example, Arabic music is notated with semi and quarter tone accidentals but with precise pitch alterations being determined by context. In the case of Arabic music, the init file arabic.ly provides a suitable set of macros and definitions that extend the standard notation using Italian note names. For more details see Section 2.10.2 [Arabic music], page 521.

Other types of music require extended or unique notations, for example, Turkish classical music (also known as Ottoman classical music) employs melodic forms known as makamlar where intervals are based on 1/9 divisions of the whole tone. Standard, Western staff notes are still used, but with special accidentals uniquely defined in the files turkish-makam.ly. For more information on Turkish classical music and makamlar see Section 2.10.3 [Turkish classical music], page 526.

Other, related init files are also available; hel-arabic.ly and makam.ly.

To locate these init files on your system, see Section “Other sources of information” in Learning Manual.

Notation Reference: Section 1.1.1 [Writing pitches], page 1, [Note names in other languages], page 8, Section 2.10.2 [Arabic music], page 521, Section 2.10.3 [Turkish classical music], page 526, Section 2.10.4 [Persian classical music], page 528.

2.10.2 Arabic music

This section highlights issues that are relevant to notating Arabic music.

References for Arabic music

Arabic music so far has been mainly an oral tradition. When music is transcribed, it is usually in a sketch format, on which performers are expected to improvise significantly. Increasingly, Western notation, with a few variations, is adopted in order to communicate and preserve Arabic music.

Some elements of Western musical notation such as the transcription of chords or independent parts, are not required to typeset the more traditional Arabic pieces. There are however some different issues, such as the need to indicate medium intervals that are somewhere between a
semi-tone and a tone, in addition to the minor and major intervals that are used in Western music. There is also the need to group and indicate a large number of different maqams (modes) that are part of Arabic music.

In general, Arabic music notation does not attempt to precisely indicate microtonal elements that are present in musical practice.

Several issues that are relevant to Arabic music are covered elsewhere:

- Note names and accidentals (including quarter tones) can be tailored as discussed in Section 2.10.1 [Common notation for non-Western music], page 521.
- Additional key signatures can also be tailored as described in [Key signature], page 21.
- Complex time signatures may require that notes be grouped manually as described in [Manual beams], page 102.
- Takasim which are rhythmically free improvisations may be written down omitting bar lines as described in [Unmetered music], page 81.

See also

Notation Reference: Section 2.10.1 [Common notation for non-Western music], page 521, [Key signature], page 21, [Manual beams], page 102.

Snippets: Section “World music” in Snippets.

Arabic note names

Traditional Arabic note names can be quite long and so may not always be suitable for the purpose of music writing.

The hel-arabic.ly file allows English note names to be used. This is a rast scale using hel-arabic.ly:

```latex
\usepackage{hel-arabic}
\relative {\key c \rast
  c' d edb f | g a bdb c | c bb a g | f d c}
```

```
\begin{figure}
\centering
\includegraphics[width=\textwidth]{hel-arabic.png}
\end{figure}
```

The arabic.ly file allows Italian (or Solfege) note names to be used instead. This is a rast scale using arabic.ly:

```latex
\usepackage{arabic}
\relative {
  do' re misb fa | sol la sisb do | sisb la sol fa | misb re do}
```

```
\begin{figure}
\centering
\includegraphics[width=\textwidth]{arabic.png}
\end{figure}
```

“Rast” is a heptatonic scale that uses quarter tone intervals and is considered the most important and central scale of the “Arabic Maqamat”. For the full list of supported Arabic scales please refer to either the hel-arabic.ly or arabic.ly files that are both included with LilyPond.

The use of standard Western notation to notate non-Western music is discussed in Section 2.10.1 [Common notation for non-Western music], page 521. Also see [Note names in other languages], page 8.
The symbol for semi-flat does not match the symbol which is used in Arabic notation. The \dwn symbol defined in arabic.ly may be used preceding a flat symbol as a work around if it is important to use the specific Arabic semi-flat symbol. The appearance of the semi-flat symbol in the key signature cannot be altered by using this method.

\include "arabic.ly"
\relative {
  \set Staff.extraNatural = ##f
  dod' dob dosd \dwn dob dobsb dosd do do
}

Snippets: Section “World music” in Snippets.

Arabic key signatures
In addition to the minor and major key signatures, Arabic key signatures are defined in either hel-arabic.ly or arabic.ly files and define many different maqam groups.

In general, a maqam uses the key signature of its group, or a neighbouring group, and varying accidentals are marked throughout the music. Arabic maqams only allow for limited modulations, due to the nature of Arabic musical instruments.

Here is an example of the key signature for a “maqam muhayer” piece of music:

\key re \bayati

Here re is the default pitch of the muhayer maqam, and bayati is the name of the base maqam in the group.

While the key signature indicates the group, it is common for the title to indicate the more specific maqam, so in this example, the name of “maqam muhayer” should also appear in the title.

Other maqams in the same bayati group, as shown in the table below (e.g., bayati, hussaini, saba, and ushaq) can be indicated in the same way. These are all variations of the base and most common maqam in the group, which is bayati. They usually differ from the base maqam in their upper tetrachords, or certain flow details that do not change their fundamental nature, as siblings.

The other maqam in the same group (nawa) is related to bayati by modulation and is shown in the table in parentheses for those that are modulations of their base maqam. Nawa, for example, can be indicated as follows:

\key sol \bayati

In Arabic music, the same term, for example bayati, that is used to indicate a maqam group, will also be a maqam that is usually the most important in the group so can also be thought of as a base maqam.

Here is one suggested grouping that maps the more common maqams to key signatures:

<table>
<thead>
<tr>
<th>maqam group</th>
<th>key</th>
<th>finalis</th>
<th>Other maqmas in group (finalis)</th>
</tr>
</thead>
<tbody>
<tr>
<td>ajam</td>
<td>major</td>
<td>sib</td>
<td>jaharka (fa)</td>
</tr>
</tbody>
</table>
bayati bayati re hussaini, muhayer, saba, ushaq, nawa (sol)
hijaz kurd re shahnaz, shad arban (sol), hijazkar (do)
iraq iraq sibs -
kurd kurd re hijazkar kurd (do)
nahawand minor do busalik (re), farah faza (sol)
nakriz minor do nawa athar, hisar (re)
rast rast do mahur, yakah (sol)
sikah sikah misb huzam

Selected Snippets

Non-traditional key signatures

The commonly used \key command sets the keyAlterations property, in the Staff context.

To create non-standard key signatures, set this property directly. The format of this command is a list:
\set Staff.keyAlterations =
`#`(((octave . step) . alter) ((octave . step) . alter) ...)

where, for each element in the list, octave specifies the octave (0 being the octave from middle C to the B above), step specifies the note within the octave (0 means C and 6 means B), and alter is ,SHARP ,FLAT ,DOUBLE-SHARP etc.

Alternatively, using the more concise format for each item in the list (step . alter) specifies the same alteration holds in all octaves.

For microtonal scales where a “sharp” is not 100 cents, alter refers to the alteration as a proportion of a 200-cent whole tone.

\include "arabic.ly"
\relative do' {
  \set Staff.keyAlterations = #`((0 . ,SEMI-FLAT)
  (1 . ,SEMI-FLAT)
  (2 . ,FLAT)
  (5 . ,FLAT)
  (6 . ,SEMI-FLAT))

%\set Staff.extraNatural = ##f
re reb \dwn reb read
dob dob dods \dwn dob |
dobsb dods do do |
}

Arabic time signatures

Some Arabic and Turkish music classical forms such as *Semai* use unusual time signatures such as 10/8. This may lead to an automatic grouping of notes that is quite different from existing typeset music, where notes may not be grouped on the beat, but in a manner that is difficult to match by adjusting automatic beaming. The alternative is to switch off automatic beaming and beam the notes manually. Even if a match to existing typeset music is not required, it may still be desirable to adjust the automatic beaming behavior and/or use compound time signatures.

Selected Snippets

*Arabic improvisation*

For improvisations or *taqasim* which are temporarily free, the time signature can be omitted and `\cadenzaOn` can be used. Adjusting the accidental style might be required, since the absence of bar lines will cause the accidental to be marked only once. Here is an example of what could be the start of a *hijaz* improvisation:

\begin{verbatim}
\include "arabic.ly"
\relative sol' {
  \key re \kurd
  \accidentalStyle forget
  \cadenzaOn
  sol4 sol sol sol fad mib sol1 fad8 mib re4. r8 mib1 fad sol
}
\end{verbatim}

See also

Notation Reference: [Manual beams], page 102, [Automatic beams], page 91, [Unmetered music], page 81, [Automatic accidentals], page 29, [Setting automatic beam behavior], page 94, [Time signature], page 72.

Installed Files: \texttt{ly/arabic.ly} \texttt{ly/hel-arabic.ly}

Snippets: Section “World music” in *Snippets*.

*Arabic music example*

Here is a template that also uses the start of a Turkish *Semai* that is familiar in Arabic music education in order to illustrate some of the peculiarities of Arabic music notation, such as medium intervals and unusual modes that are discussed in this section.

\begin{verbatim}
\include "arabic.ly"
\score {
  \header {
    title = "Semai Muhayer"
    composer = "Jamil Bek"
  }
  \relative {
    \set Staff.extraNatural = ##f
    \set Staff.autoBeaming = ##f
    \key re \bayati
}
\end{verbatim}
There are some variations in the details of how maqams are grouped, despite agreement of grouping maqams related through common lower tetra chords or by modulation. There are also some inconsistencies, even within the same texts, on how key signatures for a particular maqam should be specified. However, it is common to use a key signature per ‘group’ of maqams instead of individual key signatures for each maqam separately.

- There are also some web sites that explain maqams and even provide audio examples:
  - [https://www.maqamworld.com/](https://www.maqamworld.com/)
  - [https://www.turath.org/](https://www.turath.org/)
- Method books by the following authors for the Oud (the Arabic lute) contain examples of mainly Turkish and Arabic compositions.

### 2.10.3 Turkish classical music

This section highlights issues that are relevant to notating Turkish classical music.

**References for Turkish classical music**

Turkish classical music developed in the Ottoman Empire at roughly the same time as classical music in Europe, and has continued on into the 20th and 21st centuries as a vibrant and distinct tradition with its own compositional forms, theory and performance styles. Among its striking features is the use of microtonal intervals based on ‘commas’ of 1/9 of a tone, from which are constructed the melodic forms known as *makam* (plural *makamlar*) are constructed.

Some issues relevant to Turkish classical music are covered elsewhere. Special note names and accidentals are explained in Section 2.10.1 [Common notation for non-Western music], page 521.
Turkish note names

Pitches in Turkish classical music traditionally have unique names and the basis of pitch on 1/9-tone divisions means that makamlar employ a completely different set of intervals compared to Western scales and modes:

From a modern, notational point of view it is convenient to use standard, Western staff notes (c, d, e, etc.) but with custom accidentals that raise or lower notes by intervals of 1/9, 4/9, 5/9 or 8/9 of a tone.

These custom accidentals are defined in the file turkish-makam.ly.

For a more general explanation of non-Western music notation, see Section 2.10.1 [Common notation for non-Western music], page 521.

See also

Notation Reference: Section 2.10.1 [Common notation for non-Western music], page 521.

Turkish key signatures

Lilypond supports over 200 makam key signature definitions – well beyond what is used in Turkish classical music – with each makam having its own specific tonic / finalis pitch (known as ‘karar’ in Turkish).

It is important to be aware of the finalis of each makam. Here is an example where g is the default tonic and rast is the name of the makam.

\key g \rast

The correct accidentals, koma flat (b1) and koma sharp (f4), (both in relation to the tonic g), will be displayed automatically.

Selected Snippets

Turkish Makam example

This template uses the start of a well-known Turkish Saz Semai that is familiar in the repertoire in order to illustrate some of the elements of Turkish music notation.

\paper { tagline = ##f }

% Initialize makam settings
\include "turkish-makam.ly"

\header { 
  title = "Hüseyni Saz Semaiesi"
  composer = "Lavtacı Andon"
}

\relative { 
  \set Staff.extraNatural = ##f 
  \set Staff.autoBeaming = ##f

  This book contains information in English regarding Turkish makam including two CDs.

2.10.4 Persian classical music

This section highlights issues that are relevant to notating Persian classical music.

**Persian music notation**

The notation for Persian classical music commonly uses two accidentals for microtones, sori and koron. Invented by Ali-Naqi Vaziri around 1935, they indicate raising and lowering a pitch by (approximately) a quarter tone, respectively.

\[
\text{sori} \quad \text{koron}
\]

\[
\text{♯} \quad \text{♭}
\]

The file `persian.ly` provides support for koron and sori; they can be obtained by appending ‘k’ (koron) and ‘o’ (sori) to the English note symbols.

LilyPond supports tunings for all major Persian modes in all keys, sufficient to notate the gushehs (central nuclear melodies) of all dastgahs (musical modal systems).

The note immediately following a koron is sometimes lowered by about 20 cents. This is not notated but considered part of the tuning. However, for getting better MIDI support you can make a sound flat by appending ‘v’ to the note name (‘vlat’). This note should actually also get a strong vibrato, and the vibrato and low tuning are perceptually integrated (serialism). This is just for MIDI and has no effect on the notation itself.

---

1 There exists another, older support file for Persian classical music also called `persian.ly` (written by Kees van den Doel) that no longer works with the current LilyPond version; while note names are compatible, the selection of key signatures is not.

2 If the interval defined by the note before the koron and after the koron is a minor third. The same is true for the note below the finalis in the ‘Esfahan’ dastgah according to some (but not all) Persian musicians.
There are no further tuning issues in Persian music. Since the music is monophonic, the difference between just intonation (for example) and equal temperament is merely academic – there are no chords where out-of-tune intervals would be noticeable.

The following suffixes to English note names are provided.

- ff double-flat
- f flat
- k koron (about quarter flat, -3/10 of whole tone, 60 cents)
- o sori (about quarter sharp, 2/10 of whole tone, 40 cents)
- s sharp
- x double-sharp
- v 20 cent flat-tuned note (“vlat”, not notated)
- fv flat, tuned 20 cents down (notated as a normal flat)
- sv sharp, tuned 20 cents down (notated as a normal sharp; does never occur in traditional Persian music)

**Persian tunings**

Dastgahs can have many tunings; it has become common to name tunings after representative dastgahs featuring them. The following Persian tunings are provided to be used as the second argument of the \key command. Note that in practice not all tunings are used in all keys.

\shur ‘Shur’ gushehs with natural 5th degree
\shurk ‘Shur’ gushehs with koron 5th degree
\esfahan ‘Shur’ gushehs with koron 5th degree
\mokhalefsegah ‘Shur’ gushehs with koron 5th degree
\chahargah ‘Shur’ gushehs with koron 5th degree
\mahur the same as \major but used in a completely different context
\delkashMahur

In dastgah ‘Shur’, the 5th degree can either be natural or koron, so two tunings are provided (\shur, \shurk). Secondary dastgahs ‘Dashti’, ‘Abuata’, and ‘Bayat-e-tork’ use \shur, the derived dastgah ‘Afshari’ uses \shurk. ‘Nava’ on G is like ‘Shur’ on D (a 4th apart). The tuning of ‘Segah’ is \shurk. Other tunings are \esfahan (‘Homayoun’ on C is like ‘Esfahan’ on G, a 5th apart), \chahargah, and \mokhalefsegah. For dastgahs ‘Mahur’ and ‘Rast-panjgah’ the same tuning \mahur can be used.

All the various modulatory gushehs in all dastgahs can be notated with these tunings, with the exception of ‘Delkash’ in ‘Mahur’, but traditionally the peculiar accidentals there are notated explicitly (however, persian.ly also defines a tuning \delkashMahur).

As an example, Chahargah in D can be input with the following.

\include "persian.ly"

\relative c' {\key d \chahargah \relative c' {\include "persian.ly"} }
Persian key signatures

By default, the order of accidentals in Persian key signatures is flats followed by korons, then sharps followed by soris (then double flats, then double sharps).

An alternative key order, similar to the one used in `turkish-makam.ly`, can be selected. Here, the order is flats or korons (or double flats), then sharps or soris (or double sharps). In other words, korons and soris are handled equal to flats and sharps, respectively.

\include"persian.ly"

\key b \chahargah b'1 |
\set Staff.keyAlterationOrder = \persianAltKeyAlterationOrder
\key b \chahargah b'1 |

Further reading on Persian music

  The provided Persian tunings closely follow this book.
- *Le répertoire-modèle de la musique iranienne* by Jean During (in French) [Sourush, Tehran, 1995]
  This book contains measurements of the intervals in actual practice, consistent with the tunings of `persian.ly`.
- *Armoni-e Musiqi-e Iran* by Ali-Naqi Vaziri (in Persian) [1935]
3 General input and output

This section deals with general LilyPond input and output issues, rather than specific notation.

3.1 Input modes

The way in which the notation contained within an input file is interpreted is determined by the current input mode. In general, there are two ways of specifying the mode: a long form, e.g. \chordmode, and a short form, e.g. \chords. The long form is typically used when supplying input to a variable or when entering input directly into an explicitly created context. The short form implicitly creates a context of the correct type for the input and passes the input directly to it. It is useful in simple situations when there is no requirement to explicitly create the receiving context.

Chord mode

This is activated with the \chordmode command, and causes input to be interpreted with the syntax of chord notation, see Section 2.7 [Chord notation], page 465. Music in chord mode is rendered as chords on a staff when entered into a Staff context, as chord names when entered into a ChordNames context or as fretboards when entered into a FretBoards context.

Chord mode is also activated with the \chords command. This also causes the following input to be interpreted with the syntax of chord notation but in addition it implicitly creates a new ChordNames context and renders the input into it as chord names, see [Printing chord names], page 470.

Drum mode

This is activated with the \drummode command, and causes input to be interpreted with the syntax of drum notation, see [Basic percussion notation], page 444. Music in drum mode is rendered as percussion notes when entered into a DrumStaff context.

Drum mode is also activated with the \drums command. This also causes the following input to be interpreted with the syntax of drum notation but in addition it implicitly creates a new DrumStaff context and renders the input into it as percussion notes, see [Basic percussion notation], page 444.

Figure mode

This is activated with the \figuremode command, and causes input to be interpreted with the syntax of figured bass, see [Entering figured bass], page 482. Music in figure mode is rendered as figured bass when entered into a FiguredBass context or a Staff context.

Figure mode is also activated with the \figures command. This also causes the following input to be interpreted with the figured bass syntax but in addition it implicitly creates a new FiguredBass context and renders the input into it as figured bass, see [Introduction to figured bass], page 482.

Fret and tab modes

There are no special input modes for entering fret and tab symbols.

To create tab diagrams, enter notes or chords in note mode and render them in a TabStaff context, see [Default tablatures], page 393.

To create fret diagrams above a staff, enter notes or chords in either note mode or chord mode and render them in a FretBoards context, see [Automatic fret diagrams], page 435. Alternatively, fret diagrams can be entered as markup above the notes using the \fret-diagram command, see [Fret diagram markups], page 414.
Lyrics mode

This is activated with the \lyricmode command, and causes input to be interpreted as lyric syllables with optional durations and associated lyric modifiers, see Section 2.1 [Vocal music], page 311. Input in lyric mode is rendered as lyric syllables when entered into a Lyrics context.

Lyric mode is also activated with the \lyrics command. This also causes the following input to be interpreted as lyric syllables but in addition it implicitly creates a new Lyrics context and renders the input into it as lyric syllables.

Lyric mode is also activated with the \addlyrics command. This also implicitly creates a new Lyrics context and in addition it adds an implicit \lyricsto command which associates the following lyrics with the preceding music, see [Automatic syllable durations], page 315.

Markup mode

This is activated with the \markup command, and causes input to be interpreted with the syntax of markup, see Section A.12 [Text markup commands], page 754.

Note mode

This is the default mode or it may be activated with the \notemode command. Input is interpreted as pitches, durations, markup, etc and typeset as musical notation on a staff.

It is not normally necessary to specify note mode explicitly, but it may be useful to do so in certain situations, for example if you are in lyric mode, chord mode or any other mode and want to insert something that only can be done with note mode syntax.

3.2 Input structure

The main format of input for LilyPond are text files. By convention, these files end with .ly.

3.2.1 Structure of a score

A \score block must contain a single music expression delimited by curly brackets:

\score {
  ...
}

Note: There must be only one outer music expression in a \score block, and it must be surrounded by curly brackets.

This single music expression may be of any size, and may contain other music expressions to any complexity. All of these examples are music expressions:

\new Staff { c'4 c' c' c' }  
\new Staff { c'4 c' c' c' }  
\new Staff { d'4 d' d' d' }

<<
\new Staff { c'4 c' c' c' }  
\new Staff { d'4 d' d' d' }
>>
Comments are one exception to this general rule. (For others see Section 3.2.5 [File structure], page 536.) Both single-line comments and comments delimited by \%( ... \%) may be placed anywhere within an input file. They may be placed inside or outside a \score block, and inside or outside the single music expression within a \score block.

Remember that even in a file containing only a \score block, it is implicitly enclosed in a \book block. A \book block in a source file produces at least one output file, and by default the name of the output file produced is derived from the name of the input file, so fandangoforelephants.ly will produce fandangoforelephants.pdf.

(For more details about \book blocks, see Section 3.2.2 [Multiple scores in a book], page 533, Section 3.2.3 [Multiple output files from one input file], page 535, Section 3.2.5 [File structure], page 536.)

See also

3.2.2 Multiple scores in a book

A document may contain multiple pieces of music and text. Examples of these are an etude book, or an orchestral part with multiple movements. Each movement is entered with a \score block,

\score {
  \new GrandStaff <<
  \new StaffGroup <<
    \new Staff { \flute }
    \new Staff { \oboe }
  >>
  \new StaffGroup <<
    \new Staff { \violinI }
    \new Staff { \violinII }
  >>
  >>
}

and texts are entered with a \markup block,

\markup {
  \text...
}

All the movements and texts which appear in the same .ly file will normally be typeset in the form of a single output file.

\score {
One important exception is within lilypond-book documents, where you explicitly have to add a \book block, otherwise only the first \score or \markup will appear in the output.

The header for each piece of music can be put inside the \score block. The piece name from the header will be printed before each movement. The title for the entire book can be put inside the \book, but if it is not present, the \header which is at the top of the file is inserted.

\header {
  title = "Eight miniatures"
  composer = "Igor Stravinsky"
}
\score {
  \header { piece = "Romanze" }
  ...
}
\markup {
  ...text of second verse...
}
\markup {
  ...text of third verse...
}
\score {
  \header { piece = "Menuetto" }
  ...
}

Pieces of music may be grouped into book parts using \bookpart blocks. Book parts are separated by a page break, and can start with a title, like the book itself, by specifying a \header block.

\bookpart {
  \header {
    title = "Book title"
    subtitle = "First part"
  }
  \score { ... }
  ...
}
\bookpart {
  \header {
    subtitle = "Second part"
  }
  \score { ... }
  ...
}
3.2.3 Multiple output files from one input file

If you want multiple output files from the same .ly file, then you can add multiple \book blocks, where each such \book block will result in a separate output file. If you do not specify any \book block in the input file, LilyPond will implicitly treat the whole file as a single \book block, see Section 3.2.5 [File structure], page 536.

When producing multiple files from a single source file, LilyPond ensures that none of the output files from any \book block overwrites the output file produced by a preceding \book from the same input file.

It does this by adding a suffix to the output name for each \book which uses the default output file name derived from the input source file.

The default behavior is to append a version number suffix for each name which may clash, so

\book {
  \score { ... }
  \paper { ... }
}
\book {
  \score { ... }
  \paper { ... }
}
\book {
  \score { ... }
  \paper { ... }
}
in source file eightminiatures.ly produces

eightminiatures.pdf
eightminiatures-1.pdf
eightminiatures-2.pdf

as output files.

3.2.4 Output file names

LilyPond provides facilities to allow you to control what file names are used by the various backends when producing output files.

In the previous section, we saw how LilyPond prevents name clashes when producing several outputs from a single source file. You also have the ability to specify your own suffixes for each \book block, so for example you can produce files called

eightminiatures-Romanze.pdf
eightminiatures-Menuetto.pdf
eightminiatures-Nocturne.pdf

by adding a \bookOutputSuffix declaration inside each \book block.

\book {
  \bookOutputSuffix "Romanze"
  \score { ... }
  \paper { ... }
}
\book {
  \bookOutputSuffix "Menuetto"
  \score { ... }
  \paper { ... }

You can also specify a different output filename for book block, by using \bookOutputName declarations

\book {
    \bookOutputName "Romanze"
    \score { ... }
    \paper { ... }
}

\book {
    \bookOutputName "Menuetto"
    \score { ... }
    \paper { ... }
}

\book {
    \bookOutputName "Nocturne"
    \score { ... }
    \paper { ... }
}

The file above produces the following output files.

Romanze.pdf
Menuetto.pdf
Nocturne.pdf

### 3.2.5 File structure

A .ly file may contain any number of toplevel expressions, where a toplevel expression is one of the following:

- An output definition, such as \paper, \midi, and \layout. Such a definition at the toplevel changes the default book-wide settings. If more than one such definition of the same type is entered at the toplevel the definitions are combined, but in conflicting situations the later definitions take precedence. For details of how this affects the \layout block see Section 4.2.1 [The \layout block], page 608.
- A direct scheme expression, such as #(set-default-paper-size "a7" 'landscape) or #(ly:set-option 'point-and-click #f).
- A \header block. This sets the global (i.e., the top of file) header block. This is the block containing the default settings of titling fields like composer, title, etc., for all books within the file (see [Titles explained], page 538).
- A \score block. This score will be collected with other toplevel scores, and combined as a single \book. This behavior can be changed by setting the variable toplevel-score-handler at toplevel. (The default handler is defined in the file ..../scm/lily-library.scm and set in the file ..../ly/declarations-init.ly.)
- A \book block logically combines multiple movements (i.e., multiple \score blocks) in one document. If there are a number of \scores, one output file will be created for each \book block, in which all corresponding movements are concatenated. The only reason to explicitly specify \book blocks in a .ly file is if you wish to create multiple output files from a single input file. One exception is within lilypond-book documents, where you explicitly have to
add a \book block if you want more than a single \score or \markup in the same example. This behavior can be changed by setting the variable toplevel-book-handler at toplevel. The default handler is defined in the init file ../scm/lily.scm.

• A \bookpart block. A book may be divided into several parts, using \bookpart blocks, in order to ease the page breaking, or to use different \paper settings in different parts.

• A compound music expression, such as
  \{ c'4 d' e'2 \}
This will add the piece in a \score and format it in a single book together with all other toplevel \scores and music expressions. In other words, a file containing only the above music expression will be translated into

\book {
  \score {
    \new Staff {
      \new Voice {
        \{ c'4 d' e'2 \}
      }
    }
    \layout { }
    \paper { }
  }
  \header { }
}

This behavior can be changed by setting the variable toplevel-music-handler at toplevel. The default handler is defined in the init file ../scm/lily.scm.

• A markup text, a verse for example
  \markup {
    2. The first line verse two.
  }

Markup texts are rendered above, between or below the scores or music expressions, wherever they appear.

• A variable, such as
  \foo = \{ c4 d e d \}
This can be used later on in the file by entering \foo. The name of a variable should not contain (ASCII) numbers, multiple underscores, multiple dashes or space characters. All other characters Unicode provides are allowed, for example Latin, Greek, Chinese or Cyrillic. Non-adjacent single underscores and dashes are allowed, too. In other words, variable names like HornIII or αβγXII work.

Any combination of characters is allowed if the variable name is enclosed in double quotation marks. In this case backslashes and double quotation marks need to be escaped with backslashes (not that you actually should use them). Examples: "foo bar", "a\-b\-c", "\"Horn 3". The following example shows three things that may be entered at toplevel

\layout {
  % Don't justify the output
  ragged-right = ##t
}

\header {
At any point in a file, any of the following lexical instructions can be entered:

- \version
- \include
- \sourcefilename
- \sourcefileline
- A single-line comment, introduced by a leading \% sign.
- A multi-line comment delimited by \{% ... %\}.

Whitespace between items in the input stream is generally ignored, and may be freely omitted or extended to enhance readability. However, whitespace should always be used in the following circumstances to avoid errors:

- Around every opening and closing curly bracket.
- After every command or variable, i.e., every item that begins with a \ sign.
- After every item that is to be interpreted as a Scheme expression, i.e., every item that begins with a # sign.
- To separate all elements of a Scheme expression.
- In lyricmode before and after \set and \override commands.

See also

Notation Reference: [Titles explained], page 538, Section 4.2.1 [The \layout block], page 608.

3.3 Titles and headers

Almost all printed music includes a title and the composer’s name; some pieces include a lot more information.

3.3.1 Creating titles headers and footers

Titles explained

Each \book block in a single input file produces a separate output file, see Section 3.2.5 [File structure], page 536. Within each output file three types of titling areas are provided: Book Titles at the beginning of each book, Bookpart Titles at the beginning of each bookpart and Score Titles at the beginning of each score.

Values of titling fields such as title and composer are set in \header blocks. (For the syntax of \header blocks and a complete list of the fields available by default see [Default layout of bookpart and score titles], page 541). Book Titles, Bookpart Titles and Score Titles can all contain the same fields, although by default the fields in Score Titles are limited to piece and opus.

\header blocks may be placed in four different places to form a descending hierarchy of \header blocks:

- At the top of the input file, before all \book, \bookpart, and \score blocks.
- Within a \book block but outside all the \bookpart and \score blocks within that book.
- Within a \bookpart block but outside all \score blocks within that bookpart.
Within a \score block.

The values of the fields filter down this hierarchy, with the values set higher in the hierarchy persisting unless they are overridden by a value set lower in the hierarchy, so:

- A Book Title is derived from fields set at the top of the input file, modified by fields set in the \book block. The resulting fields are used to print the Book Title for that book, providing that there is other material which generates a page at the start of the book, before the first bookpart. A single \pagebreak will suffice.

- A Bookpart Title is derived from fields set at the top of the input file, modified by fields set in the \book block, and further modified by fields set in the \bookpart block. The resulting values are used to print the Bookpart Title for that bookpart.

- A Score Title is derived from fields set at the top of the input file, modified by fields set in the \book block, further modified by fields set in the \bookpart block and finally modified by fields set in the \score block. The resulting values are used to print the Score Title for that score. Note, though, that only \piece and \opus fields are printed by default in Score Titles unless the \paper variable, print-all-headers, is set to #t.

It is not necessary to provide \header blocks in all four places: any or even all of them may be omitted. Similarly, simple input files may omit the \book and \bookpart blocks, leaving them to be created implicitly.

If the book has only a single score, the \header block should normally be placed at the top of the file so that just a Bookpart Title is produced, making all the titling fields available for use.

If the book has multiple scores a number of different arrangements of \header blocks are possible, corresponding to the various types of musical publications. For example, if the publication contains several pieces by the same composer a \header block placed at the top of the file specifying the book title and the composer with \header blocks in each \score block specifying the \piece and/or \opus would be most suitable, as here:

\header {
    title = "SUITE I."
    composer = "J. S. Bach."
}

\score {
    \header {
        \piece = "Prélude."
    }
    \new Staff \relative {
        \clef bass
        \key g \major
        \repeat unfold 2 { g,16( d' b') a b d, b' d, } |
        \repeat unfold 2 { g,16( e' c') b c e, c' e, } |
    }
}

\score {
    \header {
        \piece = "Allemande."
    }
    \new Staff \relative {
        \clef bass
        \key g \major
    }
}
More complicated arrangements are possible. For example, text fields from the \header block in a book can be displayed in all Score Titles, with some fields overridden and some manually suppressed:

```latex
\book {
  \paper {
    print-all-headers = ##t
  }
  \header {
    title = "DAS WOHLTEMPERIRTE CLAVIER"
    subtitle = "TEIL I"
    tagline = ##f
  }
  \markup { \vspace #1 }
  \score {
    \header {
      title = "PRAELUDIUM I"
      opus = "BWV 846"
      subtitle = ##f
    }
    \new PianoStaff <<
    \new Staff { s1 }
    \new Staff { \clef "bass" s1 }
    >>
  }
  \score {
    \header {
      title = "FUGA I"
      subsubtitle = "A 4 VOCI"
    }
  }
}
```
opus = "BWV 846"
% Do not display the subtitle for this score
subtitle = ##f
}
\new PianoStaff <<
\new Staff { s1 }
\new Staff { \clef "bass" s1 }
>>
}
}

DAS WOHLTEMPERIRTE CLAVIER

TEIL I

PRAELUDIUM I

BWV 846

FUGA I

A 4 VOCI

BWV 846

Instrument

Composer

Meter Arranger

Piece 1 Opus 1

\timesig.C44/clefs.G

Piece 2 on the same page Opus 2

\timesig.C44/clefs.G

The copyright goes at the bottom of the first page

2

Instrument

Piece 3 on a new page Opus 3

\timesig.C44/clefs.G

The tagline goes at the bottom of the last page

Note that

• The instrument name will be repeated on every page.

• Only piece and opus are printed in a \score when the paper variable print-all-headers is set to \#f (the default).

• Text fields left unset in a \header block are replaced with \null markups so that the space is not wasted.

• The default settings for scoreTitleMarkup place the piece and opus text fields at opposite ends of the same line.

To change the default layout see [Custom layout for titles], page 546.
If a `\book` block starts immediately with a `\bookpart` block, no Book Title will be printed, as there is no page on which to print it. If a Book Title is required, begin the `\book` block with some markup material or a `\pageBreak` command.

Use the `breakbefore` variable inside a `\header` block that is itself in a `\score` block, to make the higher-level `\header` block titles appear on the first page on their own, with the music (defined in the `\score` block) starting on the next.

```lilypond
\book {
    \header {
        title = "This is my Title"
        subtitle = "This is my Subtitle"
        copyright = "This is the bottom of the first page"
    }
    \score {
        \header {
            piece = "This is the Music"
            breakbefore = ##t
        }
        \repeat unfold 4 { e'' e'' e'' e'' }
    }
}
```

This is my Title

This is my Subtitle

This is the bottom of the first page

Notation Reference: [Custom layout for titles], page 546, Section 3.2.5 [File structure], page 536.

Installed Files: ly/titling-init.ly.

Default layout of headers and footers

*Headers* and *footers* are lines of text appearing at the top and bottom of pages, separate from the main text of a book. They are controlled by the following \paper variables:

- oddHeaderMarkup
- evenHeaderMarkup
- oddFooterMarkup
- evenFooterMarkup

These markup variables can only access text fields from top-level \header blocks (which apply to all scores in the book) and are defined in ly/titling-init.ly. By default:

- page numbers are automatically placed on the top far left (if even) or top far right (if odd), starting from the second page.
- the instrument text field is placed in the center of every page, starting from the second page.
- the copyright text is centered on the bottom of the first page.
- the tagline is centered on the bottom of the last page, and below the copyright text if there is only a single page.

The default LilyPond footer text can be changed by adding a tagline in the top-level \header block.

```latex
\book {
  \header {
    \tagline = "... music notation for Everyone"
  }
  \score {
    \relative { c'4 d e f }
  }
}
```

... music notation for Everyone

To remove the default LilyPond footer text, the tagline can be set to \#f.

3.3.2 Custom titles headers and footers
Custom text formatting for titles
Standard \markup commands can be used to customize any header, footer and title text within
the \header block.
\score { 
\header { 
\piece = \markup { \fontsize #4 \bold "PRAELUDIUM I" } 
\opus = \markup { \italic "BWV 846" } 
} 
\{ s1 \} 
} 
PRAELUDIUM I
BWV 846

See also
Notation Reference: Section 1.8.2 [Formatting text], page 287.

Custom layout for titles
\markup commands in the \header block are useful for simple text formatting, but they do not
allow precise control over the placement of titles. To customize the placement of the text fields,
change either or both of the following \paper variables:
• bookTitleMarkup
• scoreTitleMarkup

The placement of titles when using the default values of these \markup variables is shown in
the examples in [Default layout of bookpart and score titles], page 541.
The default settings for scoreTitleMarkup as defined in ly/titling-init.ly are:
scoreTitleMarkup = \markup { \column { 
\if \should-print-all-headers { \bookTitleMarkup \hspace #1 } 
\fill-line { 
\fromproperty #'header:piece 
\fromproperty #'header:opus 
} 
} 
} 
This places the piece and opus text fields at opposite ends of the same line:
\score { 
\header { 
\piece = "PRAELUDIUM I"
\opus = "BWV 846"
} 
\{ s1 \} 
} 
PRAELUDIUM I
BWV 846
This example redefines `scoreTitleMarkup` so that the `piece` text field is centered and in a large, bold font.

```latex
\book{
  \paper{
    indent = 0\mm
    scoreTitleMarkup = \markup {
      \fill-line {
        \null
        \fontsize #4 \bold \fromproperty #'header:piece
        \fromproperty #'header:opus
      }
    }
  }
  \header{ tagline = ##f }
  \score{
    \header{
      piece = "PRAELUDIUM I"
      opus = "BWV 846"
    }
    { s1 }
  }
}
```

![PRAELUDIUM I BWV 846]

Text fields not normally effective in score `\header` blocks can be printed in the Score Title area if `print-all-headers` is placed inside the `\paper` block. A disadvantage of using this method is that text fields that are intended specifically for the Book part Title area need to be manually suppressed in every `\score` block. See [Titles explained], page 538.

To avoid this, add the desired text field to the `scoreTitleMarkup` definition. In the following example, the `composer` text field (normally associated with `bookTitleMarkup`) is added to `scoreTitleMarkup`, allowing each score to list a different composer:

```latex
\book{
  \paper{
    indent = 0\mm
    scoreTitleMarkup = \markup {
      \fill-line {
        \null
        \fontsize #4 \bold \fromproperty #'header:piece
        \fromproperty #'header:composer
      }
    }
  }
  \header{ tagline = ##f }
  \score{
    \header{
      piece = "MENUET"
      composer = "Christian Petzold"
    }
  }
}
It is also possible to create your own custom text fields, and refer to them in the markup definition.

\book {
  \paper {
    indent = 0\mm
    scoreTitleMarkup = \markup {
      \fill-line {
        \null
        \override #`(direction . ,UP)
        \dir-column {
          \center-align \fontsize #-1 \bold
          \fromproperty #'header:mycustomtext %% User-defined field
          \center-align \fontsize #4 \bold
          \fromproperty #'header:piece
        }
        \fromproperty #'header:opus
      }
    }
  }
  \header { tagline = ##f }
  \score {
    \header {
      piece = "FUGA I"
      mycustomtext = "A 4 VOCI" %% User-defined field
      opus = "BWV 846"
    }
    { s1 }
  }
}
See also

Notation Reference: [Titles explained], page 538.

Custom layout for headers and footers

\markup commands in the \header block are useful for simple text formatting, but they do not allow precise control over the placement of headers and footers. To customize the placement of the text fields, use either or both of the following \paper variables:

- oddHeaderMarkup
- evenHeaderMarkup
- oddFooterMarkup
- evenFooterMarkup

The \markup command \if can be used to add markup conditionally to header and footer text defined within the \paper block, using the following syntax within \markup:

\if condition argument

The condition is tested each time the markup is interpreted. The resulting markup is argument if the condition is true, but empty if false. Typical conditions include tests for page numbers (first page, last page, specific page, ...). To test for the condition being false, replace \if with \unless.

The following example centers page numbers at the bottom of every page. First, the default settings for oddHeaderMarkup and evenHeaderMarkup are removed by defining each as a null markup. Then, oddFooterMarkup is redefined with the page number centered. Finally, evenFooterMarkup is given the same layout by defining it as oddFooterMarkup:

\book {
  \paper {
    \print-page-number = ##t
    \print-first-page-number = ##t
    \oddHeaderMarkup = \markup \null
    \evenHeaderMarkup = \markup \null
    \oddFooterMarkup = \markup {
      \fill-line {
        \if \should-print-page-number
          \fromproperty #'page:page-number-string
        \}
      }
    }
    \evenFooterMarkup = \oddFooterMarkup
  }
  \score {
    \new Staff { s1 \break s1 \break s1 }
  }
}
Here is a list of all predefined procedures available for use with \if and \unless.

Syntax                  | Condition tested                      
\on-first-page         | First page in the book?               
\on-last-page          | Last page in the book?                
\on-first-page-of-part| First page in the book part?          
\on-last-page-of-part  | Last page in the book part?           
\on-page n             | On page number n?                     
\single-page           | Does the book fit on just one page?   
\should-print-page-numbers-global | Print page numbers in the book?      
\should-print-page-number | Print the number of the current page? 
\should-print-all-headers | Is print-all-headers true?

Installed Files: ..../ly/titling-init.ly.

3.3.3 Creating output file metadata

In addition to being shown in the printed output, \header variables are also used to set metadata for output files. For example, with PDF files, this metadata could be displayed by PDF readers as the properties of the PDF file. For each type of output file, only the \header definitions of blocks that define separate files of that type, and blocks higher in the block hierarchy, will be consulted. Therefore, for PDF files, only the \book level and the top level \header definitions affect the document-wide PDF metadata, whereas for MIDI files, all headers above or at the \score level are used.

For example, setting the title property of the header block to ‘Symphony I’ will also give this title to the PDF document, and use it as the sequence name of the MIDI file.

```
\header {
  title = "Symphony I"
}
```

\should-print-page-numbers-global can differ from \should-print-page-number for the first page in the book, depending on the print-first-page-number setting of the \paper block.
If you want to set the title of the printed output to one value, but have the title property of the PDF to have a different value, you can use \pdftitle, as below.

\header {
    title = "Symphony I"
    pdfTitle = "Symphony I by Beethoven"
}

The variables title, subject, keywords, subtitle, composer, arranger, poet, author and copyright all set PDF properties and can all be prefixed with 'pdf' to set a PDF property to a value different from the printed output.

The PDF property Creator is automatically set to ‘LilyPond’ plus the current LilyPond version, and CreationDate and ModDate are both set to the current date and time. ModDate can be overridden by setting the header variable moddate (or pdfmoddate) to a valid PDF date string.

The title variable sets also the sequence name for MIDI. The midititle variable can be used to set the sequence name independently of the value used for typeset output.

3.3.4 Creating footnotes

Footnotes may be used in many different situations. In all cases, a ‘footnote mark’ is placed as a reference in text or music, and the corresponding ‘footnote text’ appears at the bottom of the same page, separated from the music by a horizontal line. The appearance of this separator can be changed by setting the paper variable footnote-separator-markup, see \[ \text{paper variables concerning headers and markups} \], page 607.

Footnotes within music expressions and footnotes in stand-alone text outside music expressions are created in different ways.

Footnotes in music expressions

Music footnotes overview

Footnotes in music expressions fall into two categories:

Event-based footnotes

are attached to a particular event. Examples for such events are single notes, articulations (like fingering indications, accents, dynamics), and post-events (like slurs and manual beams). The general form for event-based footnotes is as follows:

\[ \text{[direction]} \ \text{footnote [mark]} \ \text{offset footnote music} \]

Time-based footnotes

are bound to a particular point of time in a musical context. Some commands like \time and \clef don't actually use events for creating objects like time signatures and clefs. Neither does a chord create an event of its own: its stem or flag is created at the end of a time step (nominally through one of the note events inside). Exactly which of a chord’s multiple note events will be deemed the root cause of a stem or flag is undefined. So for annotating those, time-based footnotes are preferable as well.

A time-based footnote allows such layout objects to be annotated without referring to an event. The general form for time-based footnotes is:

\[ \text{footnote [mark]} \ \text{offset footnote [Context].GrobName} \]

The elements for both forms are:

direction If (and only if) the \footnote is being applied to a post-event or articulation, it must be preceded with a direction indicator (‘−’, ‘−’, ‘−’) in order to attach music (with a footnote mark) to the preceding note or rest.
Chapter 3: General input and output

mark is a markup or string specifying the footnote mark which is used for marking both the reference point and the footnote itself at the bottom of the page. It may be omitted (or equivalently replaced with \default) in which case a number in sequence will be generated automatically. By default, such numerical sequences restart on each page containing a footnote. Footnotes may be numbered consecutively across page beaks by setting the variable \reset-footnotes-on-new-page to \#f, see [\paper variables concerning headers and markups], page 607.

offset is a number pair such as \((2, 1)\) specifying the X and Y offsets in units of staff spaces from the boundary of the object where the mark should be placed. Positive values of the offsets are taken from the right/top edge, negative values from the left/bottom edge and zero implies the mark is centered on the edge.

Context is the context in which the grob being footnoted is created. It may be omitted if the grob is in a bottom context, e.g., a Voice context.

GrobName specifies a type of grob to mark (like 'Flag'). If it is specified, the footnote is not attached to a music expression in particular, but rather to all grobs of the type specified which occur at that moment of musical time.

footnote is the markup or string specifying the footnote text to use at the bottom of the page.

music is the music event or post-event or articulation that is being annotated.

**Event-based footnotes**

A footnote may be attached to a layout object directly caused by the event corresponding to music with the syntax:

```
\footnote [mark] offset footnote music
```

```
\book {
  \header { tagline = ##f }
  \relative c' {
    \footnote #'(-1 . 3) "A note" a4 a4
    \footnote #'(2 . 2) "A rest" r4 a4
  }
}
```

![Music notation](image)

1A note
2A rest

Marking a *whole* chord with an event-based footnote is not possible: a chord, even one containing just a single note, does not produce an actual event of its own. However, individual notes *inside* of the chord can be marked:

```
\book {
```
\header { tagline = ##f }
\relative c' {
  \footnote #'(2 . 3) "Does not work" <a-3>2
  <\footnote #'(2 . 3) "Does not work" <a-3>2
  <\footnote #'(2 . 3) "Does not work" <a-3>2
  <\footnote #'(2 . 3) "Does not work" <a-3>2

  \footnote #'(3 . 1/2) "Also works" c-5>4
}

1 Does not work
2 Does work
3 Also works

If the footnote is to be attached to a post-event or articulation the \footnote command *must* be preceded by a direction indicator ('-', '.', '^'), and followed by the post-event or articulation to be annotated as the music argument. In this form the \footnote can be considered to be simply a copy of its last argument with a footnote mark attached to it. The syntax is:

```
direction \footnote [mark] offset footnote music
```

\book {
  \header { tagline = ##f }
  \relative {
    a'4 _\footnote #'(0 . -1) "A slur forced down" ( 
    b8 _\footnote #'(1 . 0.5) "A manual beam forced up" [ 
    b8 ]
    c4 )
    c-\footnote #'(1 . 1) "Tenuto" --
  }
}

1 A slur forced down
2 A manual beam forced up
3 Tenuto

**Time-based footnotes**

If the layout object being footmarked is indirectly caused by an event (like an Accidental or Stem caused by a NoteHead event), the GrobName of the layout object is required after the footnote text instead of music:

\book {
  \header { tagline = ##f }
  \relative c' {

  1 A slur forced down
  2 A manual beam forced up
  3 Tenuto

  **Time-based footnotes**

  If the layout object being footmarked is *indirectly* caused by an event (like an Accidental or Stem caused by a NoteHead event), the GrobName of the layout object is required after the footnote text instead of music:
A flat
Another flat
A stem

Note, however, that when a GrobName is specified, a footnote is attached to all grobs of that type at the current time step:

\footnote #'(1 . 3) "A flat" Accidental
aes
\footnote #'(2 . 5) "Articulation" Script
c'\rightarrow

A note inside of a chord can be given an individual (event-based) footnote. A ‘NoteHead’ is the only grob directly caused from a chord note, so an event-based footnote command is only suitable for adding a footnote to the ‘NoteHead’ within a chord. All other chord note grobs are indirectly caused. The \footnote command itself offers no syntax for specifying both a particular grob type as well as a particular event to attach to. However, one can use a time-based \footnote command for specifying the grob type, and then prefix this command with \single in order to have it applied to just the following event:

\footnote #'(1 . 1) "A flat" Accidental
aes
\footnote #'(2 . 2) "Another flat" Accidental
aes
\footnote #'(3 . 3) "A stem" Stem
aes
\footnote #'(4 . 4) "Articulation" Script
c'\rightarrow

1A flat
2Another flat
3A stem
4Articulation
5Articulation
Chapter 3: General input and output

Note: When footnotes are attached to several musical elements at the same musical moment, as they are in the example above, the footnotes are numbered from the higher to the lower elements as they appear in the printed output, not in the order in which they are written in the input stream.

Layout objects like clefs and key change signatures are mostly caused as a consequence of changed properties rather than actual events. Others, like bar lines and bar numbers, are a direct consequence of timing. For this reason, footnotes on such objects have to be based on their musical timing. Time-based footnotes are also preferable when marking features like stems and beams on chords: while such per-chord features are nominally assigned to one event inside the chord, relying on a particular choice would be imprudent.

The layout object in question must always be explicitly specified for time-based footnotes, and the appropriate context must be specified if the grob is created in a context other than the bottom context.

```
\book {
  \header { tagline = ##f }
  \relative c' { 
    r1 | 
    \footnote #'(0.5 . -1) "Chord stem" Staff.Stem <c e g>4 q q 
    \footnote #'(0.5 . -1) "Key change" Staff.KeySignature \key c \minor 
    q 
  }
}
```
Custom marks can be used as alternatives to numerical marks, and the annotation line joining the marked object to the mark can be suppressed:

\book {
  \header { tagline = ##f }
  \relative c' {
    \footnote "*" #'(0.5 . -2) \markup { \italic "* The first note" }
    a'4 b8
    \footnote \markup { \super "$" } #'(0.5 . 1)
    \markup { \super "$" \italic " The second note" } e
    c4
    \once \override Score.Footnote.annotation-line = ##f
    b-\footnote \markup \tiny "+" #'(0.1 . 0.1)
    \markup { \super "+" \italic " Editorial" } \p
  }
}

\footnoteset

\version 4.1.0

\context Score { 
  \tempo "Molto moderato"
  \mensuration 12\4 
  \relative c' { 
    \key c\major \override none 
    \change F \override \piano 
    \relative c' { 
      \time 4 \4 
      \chord a b c d e f g a | p 
    } 
  } 
}

1 Meter change
2 Chord stem
3 Bar line
4 Key change

More examples of custom marks are shown in [Footnotes in stand-alone text], page 556.

** Footnotes in stand-alone text **

These are for use in markup outside of music expressions. They do not have a line drawn to their point of reference: their marks simply follow the referenced markup. Marks can be inserted automatically, in which case they are numerical. Alternatively, custom marks can be provided manually.

Footnotes to stand-alone text with automatic and custom marks are created in different ways.

** Footnotes in stand-alone text with automatic marks **

The syntax of a footnote in stand-alone text with automatic marks is

\markup { \auto-footnote text footnote ... }

The elements are:

text the markup or string to be marked,
footnote  the markup or string specifying the footnote text to use at the bottom of the page.

For example:
\book
  \header { \tagline = ##f }
  \markup {
    "A simple"
    \auto-footnote "tune" \italic " By me"
    "is shown below. It is a"
    \auto-footnote "recent" \italic " Aug 2012"
    "composition."
  }
  \relative { a'4 b8 e c4 d }
}

A simple tune\footnote{1} is shown below. It is a recent\footnote{2} composition.

\begin{music}
\relative c' { c d e f g a b }
\end{music}

\footnotetext[1]{By me}
\footnotetext[2]{Aug 2012}

Footnotes in stand-alone text with custom marks

The syntax of a footnote in stand-alone text with custom marks is
\markup { ... \footnote mark footnote ... }

The elements are:

\footnotetext[1]{mark} is a markup or string specifying the footnote mark which is used for marking the reference point. Note that this mark is not inserted automatically before the footnote itself.

\footnotetext[2]{footnote} is the markup or string specifying the footnote text to use at the bottom of the page, preceded by the mark.

Any easy to type character such as ‘*’ or ‘+’ may be used as a mark, as shown in [Footnotes in music expressions], page 551. Alternatively, ASCII aliases may be used (see [ASCII aliases], page 577):
\book
  \paper { #(include-special-characters) }
  \header { \tagline = ##f }
  \markup {
    "A simple tune"
    \footnote "*" \italic "* By me"
A simple tune * is shown below. It is a recent † composition.

\relative {
  a'4 b8 e c4 d
}

\footnote \super &dagger; \concat {
  \super &dagger; \italic " Aug 2012"
}
"composition."

\relative {
  a'4 b8 e c4 d
}
}

\book {
  \header { tagline = ##f }
  \markup {
    "A simple tune"
    \footnote \super \char#x00a7 \concat {
      \super \char#x00a7 \italic " By me"
    }
    "is shown below. It is a recent"
    \footnote \super \char#x00b6 \concat {
      \super \char#x00b6 \italic " Aug 2012"
    }
    "composition."
  }
  \relative {
    a'4 b8 e c4 d
  }
}

* By me
† Aug 2012

Unicode character codes may also be used to specify marks (see [Unicode], page 576):
A simple tune § is shown below. It is a recent ¶ composition.

§ By me
¶ Aug 2012

Known issues and warnings

Multiple footnotes for the same page can only be stacked, one above the other; they cannot be printed on the same line.

Footnote marks may collide with staves, \markup objects, other footnote marks and annotation lines.

3.3.5 Reference to page numbers

A particular place of a score can be marked using the \label command, either at top-level or inside music. This label can then be referred to in a markup, to get the number of the page where the marked point is placed, using the \page-ref markup command.
The first score begins on page 1
Mark A is on page 2

The \page-ref markup command takes three arguments:
1. the label, a Scheme symbol, for example #firstScore;
2. a markup that will be used as a gauge to estimate the dimensions of the markup;
3. a markup that will be used in place of the page number if the label is not known.

The reason why a gauge is needed is that, at the time markups are interpreted, the page breaking has not yet occurred, so the page numbers are not yet known. To work around this issue, the actual markup interpretation is delayed to a later time; however, the dimensions of the markup have to be known before, so a gauge is used to decide these dimensions. If the book has between 10 and 99 pages, it may be “00”, i.e., a two digit number.

Predefined commands
\label, \page-ref.

3.3.6 Table of contents
A table of contents is included using the \markuplist \table-of-contents command. The elements which should appear in the table of contents are entered with the \tocItem command, which may be used either at top-level, or inside a music expression.

\markuplist \table-of-contents
\pageBreak
\tocItem \markup "First score"
\score {
  \c4 % ...
  \tocItem \markup "Some particular point in the first score"
  \d4 % ...
}

\tocItem \markup "Second score"
\score {
  \e4 % ...
  \tocItem \markup "Act I"
  \f4 % ...
  \tocItem \markup "Scene 1"
  \g4 % ...
  \tocItem \markup "Recit."
  \a4 % ...
}
Optionally, a label can be associated with a particular item, or a hierarchical list of existing labels, finishing with that item’s label. That latter case allows to mark the item as a ‘child’ of the preceding labeled items, thus making the score’s structure apparent in the table of contents.

Markups used for formatting the table of contents are defined in the \paper block. There are three ‘predefined’ markups already available:

- tocTitleMarkup
  Used for formatting the title of the table of contents.
  \begin{verbatim}
  \paper{\textbackslash tocTitleMarkup = \textbackslash markup \huge \column {
     \fill-line { \null "Table of Contents" \null }
     \null }
  }
  \end{verbatim}

- tocItemMarkup
  Used for formatting the elements within the table of contents.
  \begin{verbatim}
  \paper{\textbackslash tocItemMarkup = \textbackslash markup \fill-line {
     \fromproperty #'toc:text \fromproperty #'toc:page
  }}
  \end{verbatim}

- tocFormatMarkup
  How the table’s top level entries will be formatted (if there are several hierarchical levels). This is actually a procedure, as explained in Section “Markup construction in Scheme” in Extending.
  \begin{verbatim}
  \paper{\textbackslash tocFormatMarkup = \#make-bold-markup}
  \end{verbatim}

- tocIndentMarkup
  Used to define how the outline’s hierarchy will be made apparent. This markup is printed zero, one or several times depending on the level of each entry.
  \begin{verbatim}
  \paper{\textbackslash tocIndentMarkup = \textbackslash markup \hspace #4}
  \end{verbatim}

Any of these variables can be changed.

Here is an example translating the table of contents’ title into French:

\begin{verbatim}
\paper{\textbackslash tocTitleMarkup = \textbackslash markup \huge \column {
     \fill-line { \null "Table des matières" \null }
     \hspace #1}
  }
\end{verbatim}

Here is an example changing the font size of the elements in the table of contents:

\begin{verbatim}
\paper{\textbackslash tocItemMarkup = \textbackslash markup \large \fill-line {
     \fromproperty #'toc:text \fromproperty #'toc:page}
  }
\end{verbatim}

Note how the element text and page numbers are referred to in the tocItemMarkup definition.

The \textbackslash tocItemWithDotsMarkup command can be included within the tocItemMarkup to fill the line, between a table of contents item and its corresponding page number, with dots:

\begin{verbatim}
\header { \textbackslash tagline = \#f }
\paper{\textbackslash tocItemMarkup = \textbackslash tocItemWithDotsMarkup}
\end{verbatim}

\begin{verbatim}
\book{\textbackslash markuplist \table-of-contents}
\end{verbatim}
In addition to the built-in outline mechanism, custom commands can also be defined to build a more personalized table of contents with different markups. In the following example, a new style is defined for entering act and scenes in the table of contents of an opera:

A new markup variable (called `tocActMarkup`) is defined in the `\paper` block:

```latex
\paper {
  tocActMarkup = \markup \large \column {
    \hspace #1
    \fill-line { \null \italic \fromproperty #'toc:text \null }
    \hspace #1
  }
}
```

A custom music function (\`tocAct\`) is then created — which uses the new `tocActMarkup` markup definition, and allows to specify a label for each act.

```latex
tocAct =
  #(define-music-function (label text) (symbol? markup?)
    (add-toc-item! 'tocActMarkup text label))
```

Using these custom definitions and modifying some of the existing definitions, the source file could then be written as follows:

```
Table of Contents

\hspace 1cm

\textbf{Atto Primo}

Coro. Viva il nostro Alcide \hspace 1cm 1
Cesare. Presti omai l’Egizia terra \hspace 1cm 1

\textit{Recit.} Curio, Cesare venne, e vide, e vinse. \hspace 1cm 1

\hspace 1cm

\textbf{Atto Secondo}

Sinfonia \hspace 1cm 1
Cleopatra. V'adoro, pupille, saette d’Amore \hspace 1cm 1

The previous example also demonstrates how to use the `\fill-with-pattern` markup command within the context of a table of contents.

3.4 Working with input files

3.4.1 Including LilyPond files

A large project may be split up into separate files. To refer to another file, use
\include "otherfile.ly"

The line \include "otherfile.ly" is equivalent to pasting the contents of otherfile.ly
into the current file at the place where the \include appears. For example, in a large project
you might write separate files for each instrument part and create a “full score” file which
brings together the individual instrument files. Normally the included file will define a number
of variables which then become available for use in the full score file. Tagged sections can
be marked in included files to assist in making them usable in different places in a score, see
Section 3.4.2 [Different editions from one source], page 564.

Files in the current working directory may be referenced by specifying just the file name
after the \include command. Files in other locations may be included by giving either a full
path reference or a relative path reference (but use the UNIX forward slash, /, rather than the
DOS/Windows back slash, \, as the directory separator.) For example, if stuff.ly is located
one directory higher than the current working directory, use
\include "../stuff.ly"
or if the included orchestral parts files are all located in a subdirectory called parts within the
current directory, use
\include "parts/VI.ly"
\include "parts/VII.ly"
... etc

Files which are to be included can also contain \include statements of their own. These
second-level \include statements are then interpreted relatively to the path of the file containing
that command, which is convenient for multiple files located in the same subdirectory. For
example, a general library, libA, may itself use subfiles which are \included by the entry file of
that library, like this:
libA/
  libA.ly
  A1.ly
  A2.ly
  ...
then the entry file, libA.ly, will contain
\include "A1.ly"
\include "A2.ly"
...

Any .ly file can then include the entire library simply with
\include "~/libA/libA.ly"

However, that behavior can be changed globally by passing the command line option
-drelative-includes=#f, or by adding #(ly:set-option 'relative-includes #f) at the
top of the main input file. In that case, each file will be included relatively to the location of
the main file, regardless of where its \include statement is located. Complex file structures,
that require to \include both files relative to the main directory and files relative to some
other directory, may even be devised by setting relative-includes to #f or #t at appropriate places in the files.

Files can also be included from a directory in a search path specified as an option when invoking LilyPond from the command line. The included files are then specified using just their file name. For example, to compile main.ly which includes files located in a subdirectory called parts by this method, cd to the directory containing main.ly and enter

```
lilypond --include=parts main.ly
```

and in main.ly write

```
\include "VI.ly"
\include "VII.ly"
... etc
```

Files which are to be included in many scores may be placed in the LilyPond directory ../ly. (The location of this directory is installation-dependent – see Section “Other sources of information” in Learning Manual). These files can then be included simply by naming them on an \include statement. This is how the language-dependent files like english.ly are included.

LilyPond includes a number of files by default when you start the program. These includes are not apparent to the user, but the files may be identified by running lilypond --verbose from the command line. This will display a list of paths and files that LilyPond uses, along with much other information. Alternatively, the more important of these files are discussed in Section “Other sources of information” in Learning Manual. These files may be edited, but changes to them will be lost on installing a new version of LilyPond.

Some simple examples of using \include are shown in Section “Scores and parts” in Learning Manual.

See also

Known issues and warnings

If an included file is given a name which is the same as one in LilyPond’s installation files, LilyPond’s file from the installation files takes precedence.

### 3.4.2 Different editions from one source

Several methods can be used to generate different versions of a score from the same music source. Variables are perhaps the most useful for combining lengthy sections of music and/or annotation. Tags are more useful for selecting one section from several alternative shorter sections of music, and can also be used for splicing pieces of music together at different points.

Whichever method is used, separating the notation from the structure of the score will make it easier to change the structure while leaving the notation untouched.

Using variables

If sections of the music are defined in variables they can be reused in different parts of the score, see Section “Organizing pieces with variables” in Learning Manual. For example, an a cappella vocal score frequently includes a piano reduction of the parts for rehearsal purposes which is identical to the vocal music, so the music need be entered only once. Music from two variables may be combined on one staff, see [Automatic part combining], page 205. Here is an example:

```latex
sopranoMusic = \relative { a'4 b c b8( a) }
sopranoMusic = \relative { e'4 e e f }
tenorMusic = \relative { c'4 b e d8( c) }
```
Separate scores showing just the vocal parts or just the piano part can be produced by changing just the structural statements, leaving the musical notation unchanged.
For lengthy scores, the variable definitions may be placed in separate files which are then included, see Section 3.4.1 [Including LilyPond files], page 563.

Using tags

The \tag \texttt{partA} command marks a music expression with the name partA. Expressions tagged in this way can be selected or filtered out by name later, using either \keepWithTag \texttt{#name} or \removeWithTag \texttt{#name}. The result of applying these filters to tagged music is as follows:

<table>
<thead>
<tr>
<th>Filter</th>
<th>Result</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tagged music preceded by \keepWithTag \texttt{#name} or \keepWithTag \texttt{#'(name1 name2...)}</td>
<td>Untagged music and music tagged with any of the given tag names is included; music tagged with any other tag name is excluded.</td>
</tr>
<tr>
<td>Tagged music preceded by \removeWithTag \texttt{#name} or \removeWithTag \texttt{#'(name1 name2...)}</td>
<td>Untagged music and music not tagged with any of the given tag names is included; music tagged with any of the given tag names is excluded.</td>
</tr>
<tr>
<td>Tagged music not preceded by either \keepWithTag or \removeWithTag</td>
<td>All tagged and untagged music is included.</td>
</tr>
</tbody>
</table>

The arguments of the \tag, \keepWithTag and \removeWithTag commands should be a symbol or list of symbols (such as \texttt{#'score} or \texttt{#'(violinI violinII)}, followed by a music expression. If \textit{and only if} the symbols are valid LilyPond identifiers (alphabetic characters only, no numbers, underscores, or dashes) which cannot be confused with notes, the \texttt{#} may be omitted and, as a shorthand, a list of symbols can use the dot separator: i.e., \tag \texttt{#'(violinI violinII)} can be written \tag violinI.violinII. The same applies to \keepWithTag and \removeWithTag. Tagging commands are music functions, thus they cannot be used to filter items that are not music expressions, such as \texttt{\book} or \texttt{\score} blocks.

In the following example, we see two versions of a piece of music, one showing trills with the usual notation, and one with trills explicitly expanded:

```lilypond
\begin{verbatim}
music = \relative \
g8. c32 d \
\tag #'trills { d8.\trill } \
\tag #'expand { \repeat unfold 3 { e32 d } } \
c32 d \\
\score { \\
    \keepWithTag #'trills \music \\
} \
\score { \\
    \keepWithTag #'expand \music \\
}
\end{verbatim}
```

\begin{music}
\begin{musicbox}
\begin{music}
\begin{music}
\end{music}
\end{musicbox}
\end{music}
Alternatively, it is sometimes easier to exclude sections of music:

```music
\relative { 
g'8. c32 d 
\tag {d8.\trill} 
\tag {'\expand {\repeat unfold 3 { e32 d} }}
c32 d 
}
```

```
\score { 
  \removeWithTag \tag {'\expand \music 
}
\score { 
  \removeWithTag \tag {'\trills \music 
}
```

Tagged filtering can be applied to articulations, texts, etc., by prepending

```
~\tag {'your-tag
```

The code above would define a note with a conditional fingering indication and a note with a conditional annotation:

```music
\relative c' { 
  \tag {'fnger 4 
  c1\tag {'warn "Watch!"
```

Multiple tags may be placed on expressions with multiple \tag entries, or by combining multiple tags into one symbol list:

```music
\relative c' { 
  \tag {'a \tag {'both { a4 a a a } 
  \tag {'b both} { b4 b b b } 

<<
\keepWithTag {'a \music 
\keepWithTag {'b \music 
\keepWithTag {'both \music 
>>
```
Multiple `\removeWithTag` filters may be applied to a single music expression to remove several differently named tagged sections. Alternatively, you can use a single `\removeWithTag` with a list of tags.

```
music = \relative c'' {
  \tag #'A { a4 a a a }
  \tag #'B { b4 b b b }
  \tag #'C { c4 c c c }
  \tag #'D { d4 d d d }
}
\new Voice {
  \removeWithTag #'B
  \removeWithTag #'C
  \music
  \removeWithTag #'(B C)
  \music
}
```

Using two or more `\keepWithTag` filters on a single music expression will cause all of the tagged sections to be removed. The first filter will remove all except the one named and any subsequent filters will remove the rest. Using one `\keepWithTag` command with a list of multiple tags will only remove tagged sections that are not specified in that list.

```
music = \relative c'' {
  \tag #'violinI { a4 a a a }
  \tag #'violinII { b4 b b b }
  \tag #'viola { c4 c c c }
  \tag #'cello { d4 d d d }
}
\new Staff {
  \keepWithTag #'(violinI violinII)
  \music
}
```

will print \tags violinI and violinII but not viola or cello.
While `\keepWithTag` is convenient when dealing with one set of alternatives, the removal of music tagged with unrelated tags is problematic when using them for more than one purpose. In that case ‘groups’ of tags can be declared:

```
\tagGroup #'(violinI violinII viola cello)
```

Now all the different tags belong to a single ‘tag group’. Note that individual tags cannot be members of more than one tag group.

```
\keepWithTag #'violinI ...
```

will now only show music tagged from violinI’s tag group and any music tagged with one of the other tags will removed.

```
music = \relative {
    \tagGroup #'(violinI violinII viola cello)
    \tag #'violinI { c'4''violinI" c c c }
    \tag #'violinII { a2 a }
    \tag #'viola { e8 e e2. }
    \tag #'cello { d'2 d4 d }
    R1''"untagged"
}
```

```
\new Voice {
    \keepWithTag #'violinI
    \music
}
```

```
\begin{music}
\end{music}
```

When using the `\keepWithTag` command, only tags from the tag groups of the tags given in the command are visible.

Sometimes you want to splice some music at a particular place in an existing music expression. You can use `\pushToTag` and `\appendToTag` for adding material at the front or end of various music constructs. The supported places are:

- **Sequential and simultaneous music**
  - If you tagged an entire {...} or <<...>> construct, you can add music expressions at its front or back.

- **Chords**
  - If you tagged a chord <...>, you can either add notes at its front or back, or articulations for the whole chord.

- **Notes and rests**
  - If you tagged a note (also inside of a chord) or a rest, you can add articulations to the front or back of its existing articulations. Note that to add other notes, you rather have to put the note inside of a chord and tag the chord. Also note that you cannot tag a single articulation and add to it since it isn’t inherently a list. Instead, tag the note.

```
music = { \tag #'here { \tag #'here <<c'>> } }
```

```
\begin{music}
\end{music}
```

```
\begin{music}
\end{music}
```

```
\begin{music}
\end{music}
```
Both commands get a tag, the material to splice in at every occurrence of the tag, and the tagged expression.

**See also**
Notation Reference: [Automatic part combining], page 205, Section 3.4.1 [Including LilyPond files], page 563.

**Known issues and warnings**
Calling `\relative` on a music expression obtained by filtering music through `\keepWithTag` or `\removeWithTag` might cause the octave relations to change, as only the pitches actually remaining in the filtered expression will be considered. Applying `\relative` first, before `\keepWithTag` or `\removeWithTag`, avoids this danger as `\relative` then acts on all the pitches as input.

**Using global settings**
Global settings can be included from a separate file:

```
lilypond -dinclude-settings=MY_SETTINGS.ly MY_SCORE.ly
```

Groups of settings such as page size, font or type face can be stored in separate files. This allows different editions from the same score as well as standard settings to be applied to many scores, simply by specifying the proper settings file.

This technique also works well with the use of style sheets, as discussed in Section “Style sheets” in Learning Manual.

**See also**
Notation Reference: Section 3.4.1 [Including LilyPond files], page 563.

**3.4.3 Using music functions**
Where tweaks need to be reused with different music expressions, it is often convenient to make the tweak part of a music function. In this section, we discuss only substitution functions, where the object is to substitute a variable into a piece of LilyPond input code. Other more complex functions are described in Section “Music functions” in Extending.

**3.4.3.1 Substitution function syntax**
Making a function that substitutes a variable into LilyPond code is easy. The general form of these functions is

```
function =
  #(define-music-function
    (arg1 arg2 ...)
    (type1? type2? ...)
```

```groove
\appendToTag #'here c'
\appendToTag #'here e'
\appendToTag #'here g' \music
```
Chapter 3: General input and output

...music...
#

where

*argN*  
The *n*th argument.

typeN?  
A Scheme *type predicate* for which *argN* must return #t.

...music...  
Normal LilyPond input, using $ (in places where only LilyPond constructs are allowed) or # (to use it as a Scheme value or music function argument or music inside of music lists) to reference arguments (e.g., ‘#arg1’).

The list of type predicates is required. Some of the most common type predicates used in music functions are:

boolean?
cheap-list? * (use instead of ‘list?’ for faster processing)
ly:duration?
ly:music?
ly:pitch?
markup?
number?
pair?
string?
symbol?

For a list of available type predicates, see Section A.24 [Predefined type predicates], page 847. User-defined type predicates are also allowed.

**See also**

Notation Reference: Section A.24 [Predefined type predicates], page 847.

Extending LilyPond: Section “Music functions” in *Extending*.

Installed Files: lily/music-scheme.cc, scm/c++.scm, scm/lily.scm.

### 3.4.3.2 Substitution function examples

This section introduces some substitution function examples. These are not intended to be exhaustive, but rather to demonstrate some of the possibilities of simple substitution functions.

In the first example, a function is defined that simplifies setting the padding of a TextScript grob:

```scheme
padText =
#(define-music-function
  (padding)
  (number?)
#
  \once \override TextScript.padding = #padding
  #})

\relative {
  c'4"piu mosso" b a b
```
In addition to numbers, we can use music expressions such as notes for arguments to music functions:

```
customNote =
#(define-music-function
  (note)
  (ly: music?)
  #{
    \tweak NoteHead.stencil #ly:text-interface::print
    \tweak NoteHead.text
    \markup \musicglyph "custodes.mensural.u0"
    \tweak Stem.stencil ##f
    #note
  })
```

Both of those functions are simple single expressions where only the last element of a function call or override is missing. For those particular function definitions, there is a simpler alternative syntax, namely just writing out the constant part of the expression and replacing its final missing element with \etc:

```
padText =
\once \override TextScript.padding = \etc

\relative { c'4 d e f \customNote g }
```

\begin{verbatim}
\tweak NoteHead.stencil #ly:text-interface::print
\end{verbatim}
Substitution functions with multiple arguments can be defined:

```plaintext
tempoPadded = #(define-music-function (padding tempotext) (number? markup?)
  #{
    \once \override Score.MetronomeMark.padding = #padding
    \tempo \markup { \bold #tempotext }
  }\}
```

```plaintext\[
\relative c'4 d e f \custosNote g \\
\tempo \markup { "Low tempo" } \c''4 d e f g1 \\
\tempoPadded #4.0 "High tempo"  \\
g4 f e d c1
\]
```

### 3.4.3.3 How to prevent sharing of music expressions

When writing music functions, it is important to abide by a rule: the same music expressions must not be shared in several places. As an example, here is a problematic function:

```plaintext
  #{
    #bass-1 #chord #bass-2 #chord
  }\}
```

```plaintext\[
{ \clef bass  \\
simpleAccompaniment c g, <e g> \\
simpleAccompaniment d g, <f g>
}\]
```
The problem with this function becomes clear if the result is transposed:

```lilypond
\simpleAccompaniment =
\define-music-function (bass-1 bass-2 chord) =
{#
  #bass-1 #chord #bass-2 #chord #}
\transpose c e {
  \clef bass
  \simpleAccompaniment c g, <e g>
  \simpleAccompaniment d g, <f g>
}\n```

While the bass notes are correct, the chord is not transposed properly – in fact, it is being transposed twice. The reason for this is that the music expression `chord` was used twice in the result of the function, without copying it. Functions such as \transpose modify the music object directly (in the case of \transpose, the pitches are changed). If the same music object is reused, modifications made in one place where it is used affect both places, since they hold the same object. In this case, \transpose encounters the object twice and transposes it twice.

One way to fix this function is to use `$` instead of `#` to reference the variables, which makes a copy. The difference between `#` and `$` is detailed in Section “LilyPond Scheme syntax” in Extending.

```lilypond
\simpleAccompaniment =
\define-music-function (bass-1 bass-2 chord) =
{#
  $#bass-1 $#chord #$bass-2 #$chord #}
\transpose c e {
  \clef bass
  \simpleAccompaniment c g, <e g>
  \simpleAccompaniment d g, <f g>
}\n```

### 3.4.3.4 Substitution functions and relative octave entry

When `\relative` is applied to a music expression, it traverses it searching for pitched notes, and modifies the pitches in the order they are found, changing the octave of each pitch according to its octave marks (`'` and `,'`) and the previous pitch. When writing substitution functions, this may lead to the situation that a music expression is ‘relativized’ in a surprising way because the output of the function uses the parameters several times and/or in a different order. Consider this function and how its output reacts to `\relative`:

```lilypond
\simpleAccompaniment =
```
Chapter 3: General input and output

#(define-music-function
  #(   $bass-1 $chord $bass-2 $chord #))

\relative {
  \clef bass
  \simpleAccompaniment c g <e' g>
  \simpleAccompaniment d g, <f' g>
}

In this example, the output is the same as that of

\relative {
  \clef bass
  c <e' g> g <e' g>
  d <f' g> g, <f' g>
}

However, this is not the desired output when using the \simpleAccompaniment function. The pitch g, is relative to the first note of the chord that precedes it, <e' g>, although it comes after c in the input. Clearly, the pitches should be made relative according to the order in which they are input when using the function, not in the order they appear in the output of the function. This can be achieved using the make-relative Scheme macro. Its arguments are: a list of variables, a reference expression, and a main music expression. The reference expression is intended to be a mock-up of how the variables were entered in the input. Most of the time, it can be a simple expression made with #{ ... #} containing the variables in order. Beware not to make copies in the reference expression (in particular, use ‘#’, not ‘$’). The example above can be fixed using make-relative in this way:

simpleAccompaniment =
#(define-music-function
  (make-relative
    (bass-1 bass-2 chord)
    #{ #bass-1 #bass-2 #chord #}
    #{ $bass-1 $chord $bass-2 $chord #}))

\relative {
  \clef bass
3.4.4 Special characters

Text encoding

LilyPond uses the character repertoire defined by the Unicode consortium and ISO/IEC 10646. This defines a unique name and code point for the character sets used in virtually all modern languages and many others too. Unicode can be implemented using several different encodings. LilyPond uses the UTF-8 encoding (UTF stands for Unicode Transformation Format) which represents all common Latin characters in one byte, and represents other characters using a variable length format of up to four bytes.

The actual appearance of the characters is determined by the glyphs defined in the particular fonts available – a font defines the mapping of a subset of the Unicode code points to glyphs. LilyPond uses the Pango library to layout and render multi-lingual texts.

LilyPond does not perform any input encoding conversions. This means that any text, be it title, lyric text, or musical instruction containing non-ASCII characters, must be encoded in UTF-8. The easiest way to enter such text is by using a Unicode-aware editor and saving the file with UTF-8 encoding. Most popular modern editors have UTF-8 support, for example, vim, Emacs, jEdit, and Gedit do. All MS Windows systems later than NT use Unicode as their native character encoding, so even Notepad can edit and save a file in UTF-8 format. A more functional alternative for Windows is BabelPad.

If a LilyPond input file containing a non-ASCII character is not saved in UTF-8 format the error message

\texttt{FT\_Get\_Glyph\_Name () error: invalid argument}

will be generated.

Here is an example showing Cyrillic, Hebrew and Portuguese text:

\begin{verbatim}
\begin{verbatim}
\texttt{Жълтата дюля беше щастлива, че пухът, който}
\texttt{крепя натеж Адъь Лъвмут съмоме ся}
\texttt{à vo – cê uma can-ção legal}
\end{verbatim}
\end{verbatim}

Unicode

To enter a single character for which the Unicode code point is known but which is not available in the editor being used, use either \texttt{\char ##xhhhh} or \texttt{\char #ddddd} within a \texttt{\markup} block, where hhhh is the hexadecimal code for the character required and dddd is the corresponding decimal value. Leading zeroes may be omitted, but it is usual to specify all four characters in the hexadecimal representation. (Note that the UTF-8 encoding of the code point should \textit{not} be used after \texttt{\char}, as UTF-8 encodings contain extra bits indicating the number of octets.) Unicode code charts and a character name index giving the code point in hexadecimal for any character can be found on the Unicode Consortium website, https://www.unicode.org/.

For example, \texttt{\char ##x03BE} and \texttt{\char #958} would both enter the Unicode U+03BE character, which has the Unicode name “Greek Small Letter Xi”.

\begin{verbatim}
\begin{verbatim}
\texttt{\simpleAccompaniment c g <e' g>}
\texttt{\simpleAccompaniment d g, <f' g>}
\end{verbatim}
\end{verbatim}
Any Unicode code point may be entered in this way and if all special characters are entered in this format it is not necessary to save the input file in UTF-8 format. Of course, a font containing all such encoded characters must be installed and available to LilyPond.

The following example shows Unicode hexadecimal values being entered in four places – in a text mark, as articulation text, in lyrics and as stand-alone text below the score:

\score {
  \relative { c'1
    \textMark \markup { \char ##x03A8 }
    c_1 \_\markup { \tiny { \char ##x03B1 " to " \char ##x03C9 } }
  }
  \addlyrics { O \markup { \concat { Ph \char ##x0153 be! } } }
  \markup { "Copyright 2008--2022" \char ##x00A9 }
  \begin{fretboard}
    \begin{staff}
      \note c\flat\ bass\clef \tiempo C4
      \note \semibreve c\flat\ bass
      \textmark \char ##x03A8
      \textmark \char ##x03A8
      \ lyric
      \note O Phœbe!
    \end{staff}
  \end{fretboard}
}

Copyright 2008--2022 ©

To enter the copyright sign in the copyright notice use:

\header {
  copyright = \markup { \char ##x00A9 "2008" }
}

ASCII aliases
A list of ASCII aliases for special characters can be included:

\paper {
  #(include-special-characters)
}

\markup "&flqq; &ndash; &OE;uvre incompl`ete… &frqq;"

\score {
  \new Staff { \repeat unfold 9 a'4 }
  \addlyrics {
    This is al -- so wor -- kin'-in ly -- rics: \ndash;_&OE;&hellip;
  }
}

\markup \column {
  "The replacement can be disabled:"
  "\ndash; &OE; &hellip;"
  \override #'(replacement-alist . ()) "\ndash; &OE; &hellip;"
}

« – Œuvre incomplète... »
The replacement can be disabled:

\textendash; \&OE; &hellip;

You can also make your own aliases, either globally:

\begin{verbatim}
\paper{
  #(add-text-replacements!
    '("100" . "hundred")
    ("dpi" . "dots per inch")))
}
\markup "A 100 dpi."
\end{verbatim}

A hundred dots per inch.

or locally:

\begin{verbatim}
\markup \replace #'("100" . "hundred")
  ("dpi" . "dots per inch") "A 100 dpi."
\end{verbatim}

A hundred dots per inch.

The replacement is not necessarily a string; it can be an arbitrary markup. On the syntax level, this requires using Scheme quasi-quoting syntax, with a backtick ‘’ instead of a quote ‘’ to write the alist.

\begin{verbatim}
\markup \replace
  #'("2nd" . ,#{\markup \concat { 2 \super nd } #}) "2nd time"
\end{verbatim}

2\textsuperscript{nd} time

Aliases themselves are not further processed for replacements.

See also

Notation Reference: Section A.14 [List of special characters], page 818.

Installed Files: ly/text-replacements.ly.
This example will extract a single fragment of the input file starting after a half note duration in fifth measure (5 1 2) and ending after the third quarter note in the seventh measure (7 3 4).

Additional fragments can be extracted by adding more pairs of make-rhythmic-location entries to the clip-regions list in the layout block.

By default, each music fragment will be output as a separate EPS file, but other formats such as PDF or PNG can also be created if required. The extracted music is output as if had been literally ‘cut’ from the original printed score so if a fragment runs over one or more lines, a separate output file for each line will be generated.

See also

Notation Reference: Section 4.2.1 [The layout block], page 608.

Application Usage: Section “Command-line usage” in Application Usage.

3.5.2 Skipping corrected music

When entering or copying music, usually only the music near the end (where new notes are being added) is interesting to view and correct. To speed up this correction process, it is possible to skip typesetting of all but the last few measures. This is achieved by defining a special variable at the source file’s top level, as follows:

```latex
\set showLastLength = R1*5
\score { ... }
```

In this instance, nothing will be rendered but the last five measures (assuming 4/4 time signature) of every \score in the input file. For longer pieces, rendering only a small part is often an order of magnitude quicker than rendering it completely. When working on the beginning of a score that has already been typeset (for example to add a new part), the showFirstLength property may be useful as well.

Skipping parts of a score can be controlled in a more fine-grained fashion with the property Score.skipTypesetting. When it is set, no typesetting is performed at all. As a property of the Score context, it affects all voices and staves; see [Score – the master of all contexts], page 656.

This property is also used to control output to the MIDI file. If some event in the skipped section alters some of its context properties, for example a tempo or instrument change, then that new setting will take effect only at the point in time where skipTypesetting is disabled again:

```latex
\relative c' { 
  c4 c c c c 
  \set Score.skipTypesetting = ##t 
  d4 d d d 
  \tempo 4 = 80 
  e4 e e e 
  \set Score.skipTypesetting = ##f 
  f4 f f f 
}
```

Predefined commands

showLastLength, showFirstLength.
3.5.3 Alternative output formats

The default output formats for the printed score are Portable Document Format (PDF) and PostScript (PS). Portable Network Graphics (PNG), Scalable Vector Graphics (SVG) and Encapsulated PostScript (EPS) output formats are available through command line options, see Section “Basic command line options for LilyPond” in Application Usage.

SVG Output

SVG output can optionally contain metadata for graphical objects (grobs) like note heads, rests, etc. This metadata can be standard SVG attributes like id and class, or non-standard custom attributes. Specify the attributes and their values by overriding a grob’s output-attributes property with a Scheme association list (alist). The values can be numbers, strings, or symbols. For example:

```scheme
\once \override NoteHead.output-attributes = #'((id . 123)
    (class . "this that")
    (data-whatever . something))
```

The input above will produce the following `<g>` (group) tag in the SVG file:

```xml
<g id="123" class="this that" data-whatever="something">
    ...NoteHead grob SVG elements...
</g>
```

The `<g>` tag contains all of the SVG elements for a given grob. (Some grobs generate multiple SVG elements.) In SVG syntax the data- prefix is used for non-standard custom metadata attributes.

3.5.4 Replacing the notation font

Gonville is an alternative set of glyphs to Feta – part of the Emmentaler font – and used in LilyPond. They can be downloaded from:

Here are a few sample bars of music set in Gonville:
Here are a few sample bars of music set in LilyPond’s Feta glyphs:

Installation Instructions

- Download and extract the font files.
- Copy the files
gonville-11.otf
gonville-13.otf
gonville-14.otf
gonville-16.otf
gonville-18.otf
gonville-20.otf
gonville-23.otf
gonville-26.otf
gonville-brace.otf
to directory .../share/lilypond/current/fonts/otf or .../share/lilypond/X.Y.Z/fonts/otf.

- If you have gonville-*.svg and gonville-*.woff files, copy them to directory ...
share/lilypond/current/fonts/svg or ...
/share/lilypond/X.Y.Z/fonts/svg.

For more information, see Section “Other sources of information” in Learning Manual.

Note: gonville-*.otf files are for ps and eps backend (for PDF and PostScript outputs). gonville-*.svg files are for svg backend without svg-woff option. gonville-*.woff files are for svg backend with svg-woff option. For more information, see Section “Advanced command line options for LilyPond” in Application Usage.
The following syntax changes the notation font (general and brace) to the Gonville font.

\paper {
  #(define fonts
    (set-global-fonts
      #:music "gonville"
      #:brace "gonville"
    ))
}

Note: Each call to set-global-fonts completely resets both the main notation and text fonts. If any category is left unspecified, then the default font will be used for that category. Each call to set-global-fonts changes the fonts for each ~book~ that follows it, whether created explicitly or implicitly. This means that each ~book~ can have its own set of main fonts by calling set-global-fonts before it. For more information, see [Entire document fonts], page 308.

See also

Notation Reference: Section A.8 [The Emmentaler font], page 735, [Entire document fonts], page 308.

Known issues and warnings

Gonville cannot be used to typeset ‘Ancient Music’ notation and it is likely newer glyphs in later releases of LilyPond may not exist in the Gonville font family. Please refer to the author’s website for more information on these and other specifics, including licensing of Gonville.

Other notation fonts

If you have other notation fonts like ~fontname-*.otf~, ~fontname-*.svg~, and ~fontname-*.woff~, you can use them in the same way as Gonville.

That is, copy the ~fontname-*.otf~ files to ~.../share/lilypond/current/fonts/otf~ or ~.../share/lilypond/X.Y.Z/fonts/otf~. If you have ~fontname-*.svg~ and ~fontname-*.woff~ files, copy them to ~.../share/lilypond/current/fonts/svg~ or ~.../share/lilypond/X.Y.Z/fonts/svg~.

Note: At the moment, LilyPond expects the font file names to have the following suffixes, all of which must be present in the above installation folder(s) to work properly: ~-11, -13, -14, -16, -18, -20, -23, -26, -brace~. For example, ~emmentaler-11.otf~, ~emmentaler-20.svg~, and ~emmentaler-brace.woff~ etc.

The following syntax changes the notation font (general and brace) to the ~fontname~ font.

\paper {
  #(define fonts
    (set-global-fonts
      #:music "fontname" ; font filename without suffix and extension
      #:brace "fontname" ; font filename without suffix and extension
    ))
}

Note: For music and brace categories, specify the font filename without the suffix and extension.

3.6 Creating MIDI output

LilyPond can produce files that conform to the MIDI (Musical Instrument Digital Interface) standard and so allow for the checking of the music output aurally (with the help of an application
or device that understands MIDI). Listening to MIDI output may also help in spotting errors such as notes that have been entered incorrectly or are missing accidentals and so on.

MIDI files do not contain sound (like AAC, MP3 or Vorbis files) but require additional software to produce sound from them.

### 3.6.1 Supported notation for MIDI

The following musical notation can be used with LilyPond’s default capabilities to produce MIDI output:

- Breath marks
- Chords entered as chord names
- Crescendi, decrescendi over multiple notes. The volume is altered linearly between the two extremes
- Dynamic markings from ppppp to fffff, including mp, mf and sf
- Lyrics
- Markers: rehearsal marks, segni, coda marks, and section labels
- Microtones but not microtonal chords. A MIDI player that supports pitch bending will also be required.
- Pitches
- Rhythms entered as note durations, including tuplets
- ‘Simple’ articulations; staccato, staccatissimo, accent, marcato and portato
- Tempo changes using the \tempo function
- Ties
- Tremolos that are not entered with a ‘:[number]’ value

Panning, balance, expression, reverb and chorus effects can also be controlled by setting context properties, see Section 3.6.8 [Context properties for MIDI effects], page 592.

When combined with the articulate script the following, additional musical notation can be output to MIDI:

- Appoggiaturas. These are made to take half the value of the note following (without taking dots into account). For example:

  \appoggiatura c8 d2.

  The c will take the value of a crotchet.
- Ornaments (i.e., mordents, trills and turns et al.)
- Rallentando, accelerando, ritardando and a tempo
- Slurs, including phrasing slurs
- Tenuto

See Section 3.6.9 [Enhancing MIDI output], page 593.

### 3.6.2 Unsupported notation for MIDI

The following items of musical notation cannot be output to MIDI:

- Articulations other than staccato, staccatissimo, accent, marcato and portato
- Crescendi and decrescendi over a single note
- Fermata
- Figured bass
- Glissandi
- Falls and doits
• Microtonal chords
• Rhythms entered as annotations, e.g., swing
• Tempo changes without \tempo (e.g., entered as annotations)
• Tremolos that are entered with a ‘:[number]’ value

### 3.6.3 The MIDI block

To create a MIDI output file from a LilyPond input file, insert a \midi block, which can be empty, within the \score block:

```
\score { 
  ... music ... 
  \layout { } 
  \midi { } 
}
```

**Note:** A \score block that, as well as the music, contains only a \midi block (i.e., without the \layout block), will only produce MIDI output files. No notation will be printed.

The default output file extension (.midi) can be changed by using the -dmidi-extension option with the lilypond command:

```
lilypond -dmidi-extension=mid MyFile.ly
```

Alternatively, add the following Scheme expression before the start of either the \book, \bookpart or \score blocks. See Section 3.2.5 [File structure], page 536.

```
#(ly:set-option 'midi-extension "mid")
```

**See also**

Notation Reference: Section 3.2.5 [File structure], page 536, Section 3.3.3 [Creating output file metadata], page 550.

**Installed Files:** scm/midi.scm

**Known issues and warnings**

There are fifteen MIDI channels available and one additional channel (#10) for drums. Staves are assigned to channels in sequence, so a score that contains more than fifteen staves will result in the extra staves sharing (but not overwriting) the same MIDI channel. This may be a problem if the sharing staves have conflicting, channel-based, MIDI properties – such as different MIDI instruments – set.

### 3.6.4 Controlling MIDI dynamics

It is possible to control the overall MIDI volume, the relative volume of dynamic markings and the relative volume of different instruments.

Dynamic marks translate automatically into volume levels in the available MIDI volume range whereas crescendi and decrescendi vary the volume linearly between their two extremes. It is possible to control the relative volume of dynamic markings, and the overall volume levels of different instruments.

**Dynamic marks in MIDI**

Only the dynamic markings from ppppp to fffff, including mp, mf and sf have values assigned to them. This value is then applied to the value of the overall MIDI volume range to obtain the final volume included in the MIDI output for that particular dynamic marking. The default
fractions range from 0.25 for \textit{ppppp} to 0.95 for \textit{fffff}. The complete set of dynamic marks and their associated fractions can be found in \texttt{scm/midi.scm}.

\textbf{Selected Snippets}

\textit{Creating custom dynamics in MIDI output}

The following example shows how to create a dynamic marking, not included in the default list, and assign it a specific value so that it can be used to affect MIDI output.

The dynamic mark \texttt{rfz} is assigned a value of 0.9.

\begin{verbatim}
#(define (myDynamics dynamic)
  (if (equal? dynamic "rfz")
    0.9
    (default-dynamic-absolute-volume dynamic)))
\end{verbatim}

\begin{verbatim}
\score {
  \new Staff {
    \set Staff.midiInstrument = "cello"
    \set Score.dynamicAbsoluteVolumeFunction = #myDynamics
    \new Voice {
      \relative {a'4\pp b c-\rfz}
    }
  }
}
\layout {}
\midi {}
\end{verbatim}

\textit{Setting MIDI volume}

The minimum and maximum overall volume of MIDI dynamic markings is controlled by setting the properties \texttt{midiMinimumVolume} and \texttt{midiMaximumVolume} at the Score level. These properties have an effect only at the start of a voice and on dynamic marks. The fraction corresponding to each dynamic mark is modified with this formula

\[
midiMinimumVolume + (midiMaximumVolume - midiMinimumVolume) \times fraction
\]

In the following example the dynamic range of the overall MIDI volume is limited to the range 0.2–0.5.

\begin{verbatim}
\score {
  \new Staff {
    \set Staff.midiInstrument = "flute"
    \score {
      \set Staff.midiInstrument = "flute"
    }
    \set Staff.midiInstrument = "flute"
    \set Staff.midiInstrument = "flute"
  }
}
\end{verbatim}
Simple MIDI instrument equalization can be achieved by setting midiMinimumVolume and midiMaximumVolume properties within the Staff context.

For scores with multiple staves and multiple MIDI instruments, the relative volumes of each instrument can be set individually:

In this example the volume of the clarinet is reduced relative to the volume of the flute.

If these volumes properties are not set then LilyPond still applies a 'small degree' of equalization to certain instruments. See scm/midi.scm.

Installed Files: scm/midi.scm.

See also

Notation Reference: Section 4.2 [Score layout], page 608.
Internals Reference: Section “Dynamic_performer” in *Internals Reference*.

**Selected Snippets**

**Replacing default MIDI instrument equalization**

The default MIDI instrument equalizer can be replaced by setting the `instrumentEqualizer` property in the `Score` context to a user-defined Scheme procedure that uses a MIDI instrument name as its argument along with a pair of fractions indicating the minimum and maximum volumes respectively to be applied to that specific instrument.

The following example sets the minimum and maximum volumes for flute and clarinet respectively:

```
#(define my-instrument-equalizer-alist '())

#(set! my-instrument-equalizer-alist
  (append
   '(('"flute" . (0.7 . 0.9))
     ("clarinet" . (0.3 . 0.6)))
   my-instrument-equalizer-alist))

#(define (my-instrument-equalizer s)
  (let ((entry (assoc s my-instrument-equalizer-alist)))
    (if entry
      (cdr entry))))

\score {
  <<
    \new Staff {
      \key g \major
      \time 2/2
      \set Score.instrumentEqualizer = #my-instrument-equalizer
      \set Staff.midiInstrument = "flute"
      \new Voice \relative {
        r2 g'\mp g fis-
        4 g8 fis e2-
        4 d8 cis d2
      }
    }
    \new Staff {
      \key g \major
      \set Staff.midiInstrument = "clarinet"
      \new Voice \relative {
        b'1\p a2. b8 a
        g2. fis8 e
        fis2 r
      }
    }
  >>
  \layout { }
  \midi { }
}
Known issues and warnings

Changes in the MIDI volume take place only on starting a note, so crescendi and decrescendi cannot affect the volume of a single note.

Setting MIDI block properties

The \midi block can contain context rearrangements, new context definitions or code that sets the values of certain properties.

\score {
  ... music ...
  \midi {
    \tempo 4 = 72
  }
}

Here the tempo is set to 72 quarter note beats per minute. The tempo mark in the \midi block will not appear in the printed score. Although any other \tempo indications specified within the \score block will also be reflected in the MIDI output.

In a \midi block the \tempo command is setting properties during the interpretation of the music and in the context of output definitions; so it is interpreted as if it were a context modification.

Context definitions follow the same syntax as those in a \layout block;

\score {
  ... music ...
  \midi {
    \context {
      \Voice
      \remove Dynamic_performer
    }
  }
}

This example removes the effect of dynamics from the MIDI output. Note: LilyPond’s translation modules used for sound are called ‘performers’.

See also

Notation Reference: Section 1.3 [Expressive marks], page 137, Section 4.2 [Score layout], page 608.

Installed Files: ly/performer-init.ly.

Snippets: Section “MIDI” in Snippets.

Known issues and warnings
Some MIDI players do not always correctly handle tempo changes in the midi output.

Changes to the midiInstrument, as well as some MIDI options, at the beginning of a staff may appear twice in the MIDI output.

3.6.5 Using MIDI instruments
MIDI instruments are set using the midiInstrument property within a Staff context.

\score { 
  \new Staff { 
    \set Staff.midiInstrument = "glockenspiel"
    ... music ... 
  } 
  \midi { } 
} 

or

\score { 
  \new Staff \with {midiInstrument = "cello"} { 
    ... music ... 
  } 
  \midi { } 
} 

If the instrument name does not match any of the instruments listed in the ‘MIDI instruments’ section, the acoustic grand instrument will be used instead. See Section A.6 [MIDI instruments], page 730.

See also

Notation Reference: Section A.6 [MIDI instruments], page 730, Section 4.2 [Score layout], page 608.

Installed Files: scm/midi.scm.

Known issues and warnings
Percussion instruments that are notated in a DrumStaff context will be output, correctly, to MIDI channel 10 but some pitched, percussion instruments like the xylophone, marimba, vibraphone or timpani, are treated as “normal” instruments so the music for these should be entered in a Staff (not DrumStaff) context to obtain correct MIDI output. A full list of channel 10 drum-kits entries can be found in scm/midi.scm. See Section “Other sources of information” in Learning Manual.

3.6.6 Using repeats with MIDI
Repeats can be represented in the MIDI output by applying the \unfoldRepeats command.

\score { 
  \unfoldRepeats { 
    \repeat tremolo 8 { c'32 e' } 
    \repeat percent 2 { c'8 d'' } 
    \repeat volta 2 { c'4 d' e' f' } 
    \alternative { 
      \volta 1 { g' a' a' g' } 
      \volta 2 { f' e' d' c' } 
  } 
}
In order to restrict the effect of \unfoldRepeats to the MIDI output only, while also generating printable scores, it is necessary to make two \score blocks; one for MIDI (with unfolded repeats) and one for the notation (with volta, tremolo, and percent repeats);
\score {  
... music ...  
}  
\score {  
\unfoldRepeats {  
... music ...  
}  
\midi {  
}  
}  

When using multiple voices, each of the voices must contain completely unfolded repeats for correct MIDI output.

See also
Notation Reference: Section 1.4 [Repeats], page 166.

3.6.7 MIDI channel mapping

When generating a MIDI file from a score, LilyPond will automatically assign every note in the score to a MIDI channel, the one on which it should be played when it is sent to a MIDI device. A MIDI channel has a number of controls available to select, for example, the instrument to be used to play the notes on that channel, or to request the MIDI device to apply various effects to the sound produced on the channel. At all times, every control on a MIDI channel can have only a single value assigned to it (which can be modified, however, for example, to switch to another instrument in the middle of a score).

The MIDI standard supports only 16 channels per MIDI device. This limit on the number of channels also limits the number of different instruments which can be played at the same time.

LilyPond creates separate MIDI tracks for each staff, (or discrete instrument or voice, depending on the value of Score.midiChannelMapping), and also for each lyrics context. There is no limit to the number of tracks.

To work around the limited number of MIDI channels, LilyPond supports a number of different modes for MIDI channel allocation, selected using the Score.midiChannelMapping context property. In each case, if more MIDI channels than the limit are required, the allocated channel numbers wrap around back to 0, possibly causing the incorrect assignment of instruments to some notes. This context property can be set to one of the following values:

'staff
Allocate a separate MIDI channel to each staff in the score (this is the default). All notes in all voices contained within each staff will share the MIDI channel of their enclosing staff, and all are encoded in the same MIDI track.

The limit of 16 channels is applied to the total number of staff and lyrics contexts, even though MIDI lyrics do not take up a MIDI channel.

'instrument
Allocate a separate MIDI channel to each distinct MIDI instrument specified in the score. This means that all the notes played with the same MIDI instrument will
share the same MIDI channel (and track), even if the notes come from different voices or staves.
In this case the lyrics contexts do not count towards the MIDI channel limit of 16 (as they will not be assigned to a MIDI instrument), so this setting may allow a better allocation of MIDI channels when the number of staves and lyrics contexts in a score exceeds 16.

'voice
Allocate a separate MIDI channel to each voice in the score that has a unique name among the voices in its enclosing staff. Voices in different staves are always assigned separate MIDI channels, but any two voices contained within the same staff will share the same MIDI channel if they have the same name. Because midiInstrument and the several MIDI controls for effects are properties of the staff context, they cannot be set separately for each voice. The first voice will be played with the instrument and effects specified for the staff, and voices with a different name from the first will be assigned the default instrument and effects.

Note: different instruments and/or effects can be assigned to several voices on the same staff by moving the Staff_performer from the Staff to the Voice context, and leaving midiChannelMapping to default to 'staff or set to 'instrument; see the snippet below.

For example, the default MIDI channel mapping of a score can be changed to the 'instrument setting as shown:

```latex
\score {
  ...music...
  \midi {
    \context {
      \Score
      midiChannelMapping = #'instrument
    }
  }
}
```

Selected Snippets

**Changing MIDI output to one channel per voice**

When outputting MIDI, the default behavior is for each staff to represent one MIDI channel, with all the voices on a staff amalgamated. This minimizes the risk of running out of MIDI channels, since there are only 16 available per track.

However, by moving the Staff_performer to the Voice context, each voice on a staff can have its own MIDI channel, as is demonstrated by the following example: despite being on the same staff, two MIDI channels are created, each with a different midiInstrument.

```latex
\score {
  \new Staff <<
  \new Voice \relative c' \{ 
    \set midiInstrument = #'flute
    \voiceOne
    \key g \major
    \time 2/2
    r2 g-"Flute" -
    g fis -
    fis4 g8 fis e2 -
  \}
}
```
3.6.8 Context properties for MIDI effects

The following context properties can be used to apply various MIDI effects to notes played on the MIDI channel associated with the current staff, MIDI instrument or voice (depending on the value of the \Score.midiChannelMapping context property and the context in which the Staff_performer is located; see Section 3.6.7 [MIDI channel mapping], page 590).

Changing these context properties will affect all notes played on the channel after the change, however some of the effects may even apply also to notes which are already playing (depending on the implementation of the MIDI output device).

The following context properties are supported:

\Staff.midiPanPosition

The pan position controls how the sound on a MIDI channel is distributed between left and right stereo outputs. The context property accepts a number between -1.0 (#LEFT) and 1.0 (#RIGHT); the value -1.0 will put all sound power to the left stereo output (keeping the right output silent), the value 0.0 (#CENTER) will distribute the sound evenly between the left and right stereo outputs, and the value 1.0 will move all sound to the right stereo output. Values between -1.0 and 1.0 can be used to obtain mixed distributions between left and right stereo outputs.

\Staff.midiBalance

The stereo balance of a MIDI channel. Similarly to the pan position, this context property accepts a number between -1.0 (#LEFT) and 1.0 (#RIGHT). It varies the
relative volume sent to the two stereo speakers without affecting the distribution of the stereo signals.

Staff.midiExpression
Expression level (as a fraction of the maximum available level) to apply to a MIDI channel. A MIDI device combines the MIDI channel’s expression level with a voice’s current dynamic level (controlled using constructs such as \p or \ff) to obtain the total volume of each note within the voice. The expression control could be used, for example, to implement crescendo or decrescendo effects over single sustained notes (not supported automatically by LilyPond).

The expression level ranges from 0.0 (no expression, meaning zero volume) to 1.0 (full expression).

Staff.midiReverbLevel
Reverb level (as a fraction of the maximum available level) to apply to a MIDI channel. This property accepts numbers between 0.0 (no reverb) and 1.0 (full effect).

Staff.midiChorusLevel
Chorus level (as a fraction of the maximum available level) to apply to a MIDI channel. This property accepts numbers between 0.0 (no chorus effect) and 1.0 (full effect).

Known issues and warnings
As MIDI files do not contain any actual audio data, changes in these context properties translate only to requests for changing MIDI channel controls in the outputted MIDI files. Whether a particular MIDI device (such as a software MIDI player) can actually handle any of these requests in a MIDI file is entirely up to the implementation of the device: a device may choose to ignore some or all of these requests. Also, how a MIDI device will interpret different values for these controls (generally, the MIDI standard fixes the behavior only at the endpoints of the value range available for each control), and whether a change in the value of a control will affect notes already playing on that MIDI channel or not, is also specific to the MIDI device implementation.

When generating MIDI files, LilyPond will simply transform the fractional values within each range linearly into values in a corresponding (7-bit, or 14-bit for MIDI channel controls which support fine resolution) integer range (0-127 or 0-32767, respectively), rounding fractional values towards the nearest integer away from zero. The converted integer values are stored as-is in the generated MIDI file. Please consult the documentation of your MIDI device for information about how the device interprets these values.

3.6.9 Enhancing MIDI output
The default MIDI output is basic but can be improved by setting MIDI instruments and various \midi block properties.

Additional scripts allow to fine-tune the way dynamics, articulations and rhythm are rendered in MIDI: the articulate script and the swing script.

The articulate script
To use the articulate script add the appropriate \include command at the top of the input file;

\include "articulate.ly"

The script creates MIDI output into appropriately ‘time-scaled’ notes to match many articulation and tempo indications. Engraved output however, will also be altered to literally match the MIDI output.

\score {
\articulate <<
   ... music ...
>>
\midi { }
}

The \articulate command enables abbreviations (such as trills and turns) to be processed. A full list of supported items can be found in the script itself. See ly/articulate.ly.

See also

Notation Reference: Section 4.2 [Score layout], page 608.
Installed Files: ly/articulate.ly.

Note: The articulate script may shorten chords, which might not be appropriate for some types of instrument, such as organ music. Notes that do not have any articulations attached to them may also be shortened; so to allow for this, restrict the use of the \articulate function to shorter segments of music, or modify the values of the variables defined in the articulate script to compensate for the note-shortening behavior.

The swing script

The swing script provides additional functions allowing for regular durations to be played with an unequal rhythm. The most obvious example is ‘swing’ interpretation commonly found in jazz music where binary eighth notes should be played in a ternary fashion; however additional interpretations are also supported.

This script has to be \include-d at the beginning of the input file:
\include "swing.ly"

Three commands are provided:

• \tripletFeel creates a triplet-feel swing. It takes two arguments: the durations that should be affected by it (typically 8 for eighth notes), and then the music expression to which it should be applied.

• \applySwing takes an additional argument prior to the music expression: a ‘weight list’ of n number ratios expressing the way regular notes should be played: for example, #'(2 1) indicates that every other note should be played twice as long as the following note (in fact, \tripletFeel duration {music} is actually a shortcut for \applySwing duration #'(2 1) {music}). Smoother swung eighths may be obtained with a weight list of #'(3 2), or other values depending on taste.

That list may include more than two values, which allows for longer and more sophisticated groove patterns; for example, a samba feel for sixteenth notes may be obtained as follows:
\score {
   \applySwing 16 #'(3 2 2 3) {
      ... music ...
   }
   \midi { }
}

• \applySwingWithOffset adds yet another argument between the ‘weight list’ and the music expression: an offset length (entered as a ly:make-moment expression). This command should be used when the music expression has to start off-beat, with a partial swing cycle.
Note: As with the articulate script, all swing commands are also rendered in the engraved output, which results in irregular note spacing. This can be avoided by using them only in a \score block dedicated to MIDI output, rather than to printed music.

Additional help and information is included in the script file: see ly/swing.ly.

See also
Notation Reference: Section 1.2 [Rhythms], page 48.
Installed Files: ly/swing.ly.

Known issues and warnings
- \repeat constructs in music (even \repeat unfold) are not taken into consideration when determining note timing. This will lead to problems unless the durations of all repeated parts are integer multiples of the swing cycle duration.
- These functions are oblivious to time signatures and measures. That is why offsets need to be supplied by using \applySwingWithOffset if music starts off-beat.
- Grace notes are ignored and simply left unaffected; so are tuplets.

3.7 Extracting musical information
In addition to creating graphical output and MIDI, LilyPond can display musical information as text.

3.7.1 Displaying LilyPond notation
Displaying a music expression in LilyPond notation can be done with the music function \displayLilyMusic. To see the output, you will typically want to call LilyPond using the command line. For example,

```
{ 
  \displayLilyMusic \transpose c a, { c4 e g a bes }
}
```

will display
```
{ a,4 cis4 e4 fis4 g4 }
```

By default, LilyPond will print these messages to the console along with all the other LilyPond compilation messages. To split up these messages and save the results of \displayLilyMusic, redirect the output to a file.

```
lilypond file.ly >display.txt
```

Note that LilyPond does not just display the music expression, but also interprets it (since \displayLilyMusic returns it in addition to displaying it). Just insert \displayLilyMusic into the existing music in order to get information about it.

To interpret and display a music section in the console but, at the same time, remove it from the output file use the \void command.

```
{ 
  \void \displayLilyMusic \transpose c a, { c4 e g a bes }
  c1
}
```
3.7.2 Displaying scheme music expressions

See Section “Displaying music expressions” in Extending.

3.7.3 Saving music events to a file

Music events can be saved to a file on a per-staff basis by including a file in your main score.

\include "event-listener.ly"

This creates file(s) called FILENAME-STAFFNAME.notes or FILENAME-unnamed-staff.notes for each staff. Note that if you have multiple unnamed staves, the events for all staves are mixed together in the same file. The output looks like this:

0.000 note 57 4 p-c 2 12
0.000 dynamic f
0.250 note 62 4 p-c 7 12
0.500 note 66 8 p-c 9 12
0.625 note 69 8 p-c 14 12
0.750 rest 4
0.750 breathe

The syntax is a tab-delimited line, with two fixed fields on each line followed by optional parameters.

\texttt{time \hspace{1em} type \hspace{1em} ...params...}

This information can easily be read into other programs such as python scripts, and can be very useful for researchers wishing to perform musical analysis or playback experiments with LilyPond.

Known issues and warnings

Not all lilypond music events are supported by event-listener.ly. It is intended to be a well-crafted “proof of concept”. If some events that you want to see are not included, copy event-listener.ly into your lilypond directory and modify the file so that it outputs the information you want.
4 Spacing issues

The global paper layout is determined by three factors: the page layout, the line breaks, and the spacing. These all influence each other. The choice of spacing determines how densely each system of music is set. This influences where line breaks are chosen, and thus ultimately, how many pages a piece of music takes.

Globally speaking, this procedure happens in four steps: first, flexible distances (‘springs’) are chosen, based on durations. All possible line breaking combinations are tried, and a ‘badness’ score is calculated for each. Then the height of each possible system is estimated. Finally, a page breaking and line breaking combination is chosen so that neither the horizontal nor the vertical spacing is too cramped or stretched.

Two types of blocks can contain layout settings: `\paper {...}` and `\layout {...}`. The `\paper` block contains page layout settings that are expected to be the same for all scores in a book or bookpart, such as the paper height, or whether to print page numbers, etc. See Section 4.1 [Page layout], page 597. The `\layout` block contains score layout settings, such as the number of systems to use, or the space between staff groups, etc. See Section 4.2 [Score layout], page 608.

4.1 Page layout

This section discusses page layout options for the `\paper` block.

4.1.1 The `\paper` block

`\paper` blocks may be placed in three different places to form a descending hierarchy of `\paper` blocks:

- At the top of the input file, before all `\book`, `\bookpart`, and `\score` blocks.
- Within a `\book` block but outside all the `\bookpart` and `\score` blocks within that book.
- Within a `\bookpart` block but outside all `\score` blocks within that bookpart.

A `\paper` block cannot be placed within a `\score` block.

The values of the fields filter down this hierarchy, with the values set higher in the hierarchy persisting unless they are overridden by a value set lower in the hierarchy.

Several `\paper` blocks can appear at each of the levels, for example as parts of several `\include` files. If so, the fields at each level are merged, with values encountered last taking precedence if duplicated fields appear.

Settings that can appear in a `\paper` block include:

- the `set-paper-size` scheme function,
- `\paper` variables used for customizing page layout, and
- markup definitions used for customizing the layout of headers, footers, and titles.

The `set-paper-size` function is discussed in the next section, Section 4.1.2 [Paper size and automatic scaling], page 598. The `\paper` variables that deal with page layout are discussed in later sections. The markup definitions that deal with headers, footers, and titles are discussed in Section 3.3.2 [Custom titles headers and footers], page 545.

Most `\paper` variables will only work in a `\paper` block. The few that will also work in a `\layout` block are listed in Section 4.2.1 [The `\layout` block], page 608.

Except when specified otherwise, all `\paper` variables that correspond to distances on the page are measured in millimeters, unless a different unit is specified by the user. For example, the following declaration sets `top-margin` to ten millimeters:

\paper {
top-margin = 10
}

To set it to 0.5 inches, use the \in unit suffix:
\paper {
  top-margin = 0.5\in
}

The available unit suffixes are \mm, \cm, \in, \pt, and \bp. These units are simple values for converting from millimeters; they are defined in ly/paper-defaults-init.ly. For the sake of clarity, when using millimeters, the \mm is typically included in the code, even though it is not technically necessary.

It is also possible to define \paper values using Scheme. The Scheme equivalent of the above example is:
\paper {
  #(define top-margin (* 0.5 in))
}

See also
Notation Reference: Section 4.1.2 [Paper size and automatic scaling], page 598, Section 3.3.2 [Custom titles headers and footers], page 545, Section 4.2.1 [The \layout block], page 608.

4.1.2 Paper size and automatic scaling

Setting the paper size
‘A4’ is the default value when no explicit paper size is set. However, there are two functions that can be used to change it:

set-default-paper-size
  #(set-default-paper-size "quarto")
which must always be placed at the toplevel scope, and

set-paper-size
\paper {
  #(set-paper-size "tabloid")
}
which must always be placed in a \paper block.

If the set-default-paper-size function is used in the toplevel scope, it must come before any \paper block. set-default-paper-size sets the paper size for all pages, whereas set-paper-size only sets the paper size for the pages that the \paper block applies to. For example, if the \paper block is at the top of the file, then it applies the paper size to all pages. If the \paper block is inside a \book, then the paper size applies only to that book.

When the set-paper-size function is used, it must be placed before any other functions used within the same \paper block. See [Automatic scaling to paper size], page 599.

Paper sizes are defined in file scm/paper.scm; see Section A.5 [Predefined paper sizes], page 727, for a complete list.

Both set-default-paper-size and set-paper-size also accept a quoted number pair as its argument to set a custom paper size. For example,

  #(set-default-paper-size "'(cons (* 100 mm) (* 50 mm)))
sets the paper width and height to 100 mm and 50 mm, respectively.
Possible units are in (inches), cm (centimeters), mm (millimeters), pt (points), and bp (big points).

If the symbol ‘landscape’ is added to the paper size function as a second argument, pages are rotated by 90 degrees, and wider line widths are set accordingly:

#(set-default-paper-size "a6" 'landscape)

Swapping the paper dimensions without having the print rotated (like when printing to postcard size, or creating graphics for inclusion rather than a stand-alone document) can be achieved by appending ‘landscape’ to the name of the paper size itself:

#(set-default-paper-size "a6landscape")

When the paper size ends with an explicit ‘landscape’ or ‘portrait’, the presence of a ‘landscape’ symbol only affects print orientation, not the paper dimensions used for layout.

Notation Reference: [Automatic scaling to paper size], page 599, Section A.5 [Predefined paper sizes], page 727.

Installed Files: scm/paper.scm.

Automatic scaling to paper size

If the paper size is changed with one of the scheme functions (set-default-paper-size or set-paper-size), the values of several \paper variables are automatically scaled to the new size. To bypass the automatic scaling for a particular variable, set the variable after setting the paper size. Note that the automatic scaling is not triggered by setting the paper-height or paper-width variables, even though paper-width can influence other values (this is separate from scaling and is discussed below). The set-default-paper-size and set-paper-size functions are described in [Setting the paper size], page 598.

The vertical dimensions affected by automatic scaling are top-margin and bottom-margin (see Section 4.1.3 [Fixed vertical spacing \paper variables], page 599). The horizontal dimensions affected by automatic scaling are left-margin, right-margin, inner-margin, outer-margin, binding-offset, indent, and short-indent (see Section 4.1.5 [Horizontal spacing \paper variables], page 602).

The default values for these dimensions are set in ly/paper-defaults-init.ly, using internal variables named top-margin-default, bottom-margin-default, etc. These are the values that result at the default paper size a4. For reference, with a4 paper the paper-height is 297\mm and the paper-width is 210\mm.

See also
Notation Reference: Section 4.1.3 [Fixed vertical spacing \paper variables], page 599, Section 4.1.5 [Horizontal spacing \paper variables], page 602.

4.1.3 Fixed vertical spacing \paper variables

\begin{itemize}
\item Note: Some \paper dimensions are automatically scaled to the paper size, which may lead to unexpected behavior. See [Automatic scaling to paper size], page 599.
\end{itemize}

Default values (before scaling) are defined in file ly/paper-defaults-init.ly.
Chapter 4: Spacing issues

paper-height
The height of the page, unset by default. Note that the automatic scaling of some vertical dimensions is not affected by this.

top-margin
The margin between the top of the page and the top of the printable area. If the paper size is modified, this dimension’s default value is scaled accordingly.

bottom-margin
The margin between the bottom of the printable area and the bottom of the page. If the paper size is modified, this dimension’s default value is scaled accordingly.

ragged-bottom
If this is set to true, systems will be set at their natural spacing, neither compressed nor stretched vertically to fit the page.

ragged-last-bottom
If this is set to false, then the last page, and the last page in each section created with a \bookpart block, will be vertically justified in the same way as the earlier pages.

See also
Notation Reference: [Automatic scaling to paper size], page 599.

Snippets: Section “Spacing” in Snippets.

Known issues and warnings
The titles (from the \header block) are treated as a system, so ragged-bottom and ragged-last-bottom will add space between the titles and the first system of the score.

Explicitly defined paper sizes will override any user-defined top or bottom margin settings.

4.1.4 Flexible vertical spacing \paper variables
In most cases, it is preferable for the vertical distances between certain items (such as margins, titles, systems, and separate scores) to be flexible, so that they stretch and compress nicely according to each situation. A number of \paper variables (listed below) are available to fine-tune the stretching behavior of these dimensions.

Note that the \paper variables discussed in this section do not control the spacing of staves within individual systems. Within-system spacing is controlled by grob properties, with settings typically entered inside a \score or \layout block, and not inside a \paper block. See Section 4.4.1 [Flexible vertical spacing within systems], page 620.

Structure of flexible vertical spacing alists
Each of the flexible vertical spacing \paper variables is an alist (association list) containing four keys:

- basic-distance – the vertical distance, measured in staff spaces, between the reference points of the two items, when no collisions would result, and no stretching or compressing is in effect. The reference point of a (title or top-level) markup is its highest point, and the reference point of a system is the vertical center of the nearest StaffSymbol – even if a non-staff line (such as a Lyrics context) is in the way. Values for basic-distance that are less than either padding or minimum-distance are not meaningful, since the resulting distance will never be less than either padding or minimum-distance.
• **minimum-distance** – the smallest allowable vertical distance, measured in staff spaces, between the reference points of the two items, when compressing is in effect. Values for minimum-distance that are less than padding are not meaningful, since the resulting distance will never be less than padding.

• **padding** – the minimum required amount of unobstructed vertical whitespace between the bounding boxes (or skylines) of the two items, measured in staff spaces.

• **stretchability** – a unitless measure of the dimension’s relative propensity to stretch. If zero, the distance will not stretch (unless collisions would result). When positive, the significance of a particular dimension’s stretchability value lies only in its relation to the stretchability values of the other dimensions. For example, if one dimension has twice the stretchability of another, it will stretch twice as easily. Values should be non-negative and finite. The value +inf.0 triggers a programming_error and is ignored, but 1.0e7 can be used for an almost infinitely stretchable spring. If unset, the default value is set to basic-distance. Note that the dimension’s propensity to **compress** cannot be directly set by the user and is equal to (basic-distance – minimum-distance).

If a page has a ragged bottom, the resulting distance is the largest of:

• basic-distance,

• minimum-distance, and

• padding plus the smallest distance necessary to eliminate collisions.

For multi-page scores with a ragged bottom on the last page, the last page uses the same spacing as the preceding page, provided there is enough space for that.

Specific methods for modifying alists are discussed in Section 5.3.7 [Modifying alists], page 688. The following example demonstrates the two ways these alists can be modified. The first declaration updates one key value individually, and the second completely redefines the variable:

```
\paper {
  system-system-spacing.basic-distance = #8
  score-system-spacing =
    #';((basic-distance . 12)
      (minimum-distance . 6)
      (padding . 1)
      (stretchability . 12))
}
```

**List of flexible vertical spacing \paper variables**

The names of these variables follow the format upper-lower-spacing, where upper and lower are the items to be spaced. Each distance is measured between the reference points of the two items (see the description of the alist structure above). Note that in these variable names, the term ‘markup’ refers to both title markups (bookTitleMarkup or scoreTitleMarkup) and top-level markups (see Section 3.2.5 [File structure], page 536). All distances are measured in staff spaces.

Default settings are defined in ly/paper-defaults-init.ly.

**markup-system-spacing**
the distance between a (title or top-level) markup and the system that follows it.

**score-markup-spacing**
the distance between the last system of a score and the (title or top-level) markup that follows it.
score-system-spacing
the distance between the last system of a score and the first system of the score that follows it, when no (title or top-level) markup exists between them.

system-system-spacing
the distance between two systems in the same score.

markup-markup-spacing
the distance between two (title or top-level) markups.

last-bottom-spacing
the distance from the last system or top-level markup on a page to the bottom of the printable area (i.e., the top of the bottom margin).

top-system-spacing
the distance from the top of the printable area (i.e., the bottom of the top margin) to the first system on a page, when there is no (title or top-level) markup between the two.

top-markup-spacing
the distance from the top of the printable area (i.e., the bottom of the top margin) to the first (title or top-level) markup on a page, when there is no system between the two.

See also
Notation Reference: Section 4.4.1 [Flexible vertical spacing within systems], page 620.

Snippets: Section “Spacing” in Snippets.

4.1.5 Horizontal spacing \paper variables

\Note: Some \paper dimensions are automatically scaled to the paper size, which may lead to unexpected behavior. See [Automatic scaling to paper size], page 599.

\paper variables for widths and margins
Default values (before scaling) that are not listed here are defined in file ly/paper-defaults-init.ly.

paper-width
The width of the page, unset by default. While paper-width has no effect on the automatic scaling of some horizontal dimensions, it does influence the line-width variable. If both paper-width and line-width are set, then left-margin and right-margin will also be updated. Also see check-consistency.

line-width
When specified in a \paper block this defines the horizontal extent available for the staff lines in un-indented systems. If left unspecified, the paper’s line-width is determined from (paper-width – left-margin – right-margin). If the paper’s line-width is specified, and both left-margin and right-margin are not, then the margins will be updated to center the systems on the page automatically. Also see check-consistency.

line-widths for individual scores can be specified in the scores’ \layout blocks. These values control the width of the lines produced on a score-by-score basis. If
line-width is not specified for a score, it defaults to the paper’s line-width. Setting a score’s line-width has no effect on the paper margins. Staff lines, of a length determined by the score’s line-width, are left-aligned within the paper area defined by the paper’s line-width. If the score and paper line-widths are equal, the staff lines will extend exactly from the left margin to the right margin, but if the score’s line-width is greater than the paper’s line-width the staff lines will run over into the right margin.

left-margin
The margin between the left edge of the page and the start of the staff lines in unindented systems. If the paper size is modified, this dimension’s default value is scaled accordingly. If left-margin is unset, and both line-width and right-margin are set, then left-margin is set to (paper-width – line-width – right-margin). If only line-width is set, then both margins are set to ((paper-width – line-width) / 2), and the systems are consequently centered on the page. Also see check-consistency.

right-margin
The margin between the right edge of the page and the end of the staff lines in non-ragged systems. If the paper size is modified, this dimension’s default value is scaled accordingly. If right-margin is unset, and both line-width and left-margin are set, then right-margin is set to (paper-width – line-width – left-margin). If only line-width is set, then both margins are set to ((paper-width – line-width) / 2), and the systems are consequently centered on the page. Also see check-consistency.

check-consistency
If this is true (the default value), print a warning if left-margin, line-width, and right-margin do not exactly add up to paper-width, and replace each of these (except paper-width) with their default values (scaled to the paper size if necessary). If set to false, ignore any inconsistencies and allow systems to run off the edge of the page.

ragged-right
If set to true, systems will not fill the line width. Instead, systems end at their natural horizontal length. Default: #t for scores with only one system, and #f for scores with two or more systems. This variable can also be set in a \layout block.

ragged-last
If set to true, the last system in the score will not fill the line width. Instead the last system ends at its natural horizontal length. Default: #f. This variable can also be set in a \layout block.

See also
Notation Reference: [Automatic scaling to paper size], page 599.

Known issues and warnings
Explicitly defined paper sizes will override any user-defined left or right margin settings.

\paper variables for two-sided mode
Default values (before scaling) are defined in ly/paper-defaults-init.ly.
two-sided
If set to true, use inner-margin, outer-margin and binding-offset to determine margins depending on whether the page number is odd or even. This overrides left-margin and right-margin.

inner-margin
The margin all pages have at the inner side if they are part of a book. If the paper size is modified, this dimension’s default value is scaled accordingly. Works only with two-sided set to true.

outer-margin
The margin all pages have at the outer side if they are part of a book. If the paper size is modified, this dimension’s default value is scaled accordingly. Works only with two-sided set to true.

binding-offset
The amount inner-margin is increased to make sure nothing will be hidden by the binding. If the paper size is modified, this dimension’s default value is scaled accordingly. Works only with two-sided set to true.

See also
Notation Reference: [Automatic scaling to paper size], page 599.

\paper variables for shifts and indents
Default values (before scaling) that are not listed here are defined in ly/paper-defaults-init.ly.

horizontal-shift
The amount that all systems (including titles and system separators) are shifted to the right. Default: 0.0\mm.

indent
The level of indentation for the first system in a score. If the paper size is modified, this dimension’s default value is scaled accordingly. The space within line-width available for the first system is reduced by this amount. indent may also be specified in \layout blocks to set indents on a score-by-score basis.

short-indent
The level of indentation for all systems in a score besides the first system. If the paper size is modified, this dimension’s default value is scaled accordingly. The space within line-width available for systems other than the first is reduced by this amount. short-indent may also be specified in \layout blocks to set short indents on a score-by-score basis.

See also
Notation Reference: [Automatic scaling to paper size], page 599.

Snippets: Section “Spacing” in Snippets.

4.1.6 Other \paper variables
\texttt{\paper variables for line breaking}

\texttt{max-systems-per-page}
The maximum number of systems that will be placed on a page. This is currently supported only by the \texttt{ly:optimal-breaking} algorithm. Default: unset.

\texttt{min-systems-per-page}
The minimum number of systems that will be placed on a page. This may cause pages to be overfilled if it is made too large. This is currently supported only by the \texttt{ly:optimal-breaking} algorithm. Default: unset.

\texttt{systems-per-page}
The number of systems that should be placed on each page. This is currently supported only by the \texttt{ly:optimal-breaking} algorithm. Default: unset.

\texttt{system-count}
The number of systems to be used for a score. Default: unset. This variable can also be set in a \texttt{\layout} block.

\texttt{See also}
Notation Reference: Section 4.3.1 [Line breaking], page 613.

\texttt{\paper variables for page breaking}

Default values not listed here are defined in \texttt{ly/paper-defaults-init.ly}

\texttt{page-breaking}

\texttt{page-breaking-system-system-spacing}
Tricks the page breaker into thinking that \texttt{system-system-spacing} is set to something different than it really is. For example, if \texttt{page-breaking-system-system-spacing.padding} is set to something substantially larger than \texttt{system-system-spacing.padding}, then the page breaker will put fewer systems on each page. Default: unset.

\texttt{page-count}
The number of pages to be used for a score. Default: unset.

\texttt{page-spacing-weight}
When using the \texttt{ly:optimal-breaking} algorithm for page breaking, LilyPond has to make trade-offs between horizontal and vertical stretching so that the overall spacing is more acceptable. This parameter controls the relative importance of page (vertical) spacing and line (horizontal) spacing. High values will make page spacing more important. Default: 10.

The following variables are effective only when \texttt{page-breaking} is set to \texttt{ly:page-turn-breaking}. Page breaks are then chosen to minimize the number of page turns. Since page turns are required on moving from an odd-numbered page to an even-numbered one, a layout in which the last page is odd-numbered will usually be favoured. Places where page turns are preferred can be indicated manually by inserting \texttt{\allowPageTurn} or automatically by including the \texttt{Page_turn_engraver} (see [Optimal page turning], page 619).

If there are insufficient choices available for making suitable page turns, LilyPond may insert a blank page either within a score, between scores (if there are two or more scores), or by ending
a score on an even-numbered page. The values of the following three variables may be increased
to make these actions less likely.

The values are penalties, i.e., the higher the value the less likely will be the associated action
relative to other choices.

**blank-page-penalty**
The penalty for having a blank page in the middle of a score. If `blank-page-
penalty` is large and `ly:page-turn-breaking` is selected, then LilyPond will be
less likely to insert a page in the middle of a score. Instead, it will space out the
music further to fill the blank page and the following one. Default: 5.

**blank-last-page-penalty**
The penalty for ending the score on an even-numbered page. If `blank-last-page-
penalty` is large and `ly:page-turn-breaking` is selected, then LilyPond will be
less likely to produce a score in which the last page is even-numbered. Instead, it
will adjust the spacing in order to use one page more or one page less. Default: 0.

**blank-after-score-page-penalty**
The penalty for having a blank page after the end of one score and before the next.
By default, this is smaller than `blank-page-penalty`, so that blank pages after
scores are inserted in preference to blank pages within a score. Default: 2.

Notation Reference: Section 4.3.2 [Page breaking], page 617, [Optimal page breaking],
page 618, [Optimal page turning], page 619, [Minimal page breaking], page 618, [One-page
page breaking], page 619, [One-line page breaking], page 619, [One-line-auto-height page break-
ing], page 619.

\paper variables for page numbering
Default values not listed here are defined in ly/paper-defaults-init.ly

**auto-first-page-number**
The page breaking algorithm is affected by the first page number being odd or even.
If set to true, the page breaking algorithm will decide whether to start with an odd
or even number. This will result in the first page number remaining as is or being
increased by one. Default: #f.

**first-page-number**
The value of the page number on the first page.

**print-first-page-number**
If set to true, a page number is printed on the first page.

**print-page-number**
If set to false, page numbers are not printed.

**page-number-type**
The type of numerals used for page numbers. Choices include 'arabic,
'rroman-ij-lower', 'rroman-ij-upper', 'rroman-lower', and 'rroman-upper. Default:
'arabic.

**bookpart-level-page-numbering**
If set to true, each bookpart has its independent sequence of page numbers, starting
at first-page-number (1 by default).
Chapter 4: Spacing issues

This may also be used for one bookpart only. The typical use case is numbering pages of the first bookpart independently and in roman numerals, as may be wished for an analytical introduction to the work being published.

\book {
  \bookpart {
    \paper {
      bookpart-level-page-numbering = ##t
      page-number-type = #'roman-lower
    }
    \markuplist \wordwrap-lines {
      Lorem ipsum dolor sit amet.
    }
  }
  \bookpart {
  ...
  }
}

See also

Known issues and warnings

Odd page numbers are always on the right. If you want the music to start on page 1 there must be a blank page on the back of the cover page so that page 1 is on the right-hand side.

\paper variables concerning headers and markups

print-all-headers
If set to true, this will print all headers for each \score in the output. Normally only the piece and opus header variables are printed. For use cases see Section 3.3 [Titles and headers], page 538. Default: #f.

reset-footnotes-on-new-page
If set to true, footnote numbers are reset on each page break. For footnotes numbered consecutively across page breaks, set to #f. Default: #t.

system-separator-markup
A markup object that is inserted between systems, often used for orchestral scores. Default: unset. The \slashSeparator markup, defined in ly/titling-init.ly, is provided as a sensible default, for example:

#(set-default-paper-size "a8")

\book {
  \paper {
    system-separator-markup = \slashSeparator
  }
  \header {
    tagline = ##f
  }
  \score {
    \relative { c'\break c1 \break c1 }
  }
}
footnote-separator-markup
A markup object that is inserted above the footnote texts at the bottom of the page.
Default: a centered horizontal line, defined in ly/paper-defaults-init.ly.

See also
Snippets: Section “Spacing” in Snippets.

Known issues and warnings
The default page header puts the page number and the instrument field from the \header block on a line.

\paper variables for debugging
The variables debug-beam-scoring, debug-slur-scoring and debug-tie-scoring allow to print debugging output for beam, slur and tie scoring. See Section “Debugging scoring algorithms” in Contributor’s Guide for a detailed explanation, what these variables do.

4.2 Score layout
This section discusses score layout options for the \layout block.

4.2.1 The \layout block
While the \paper block contains settings that relate to the page formatting of the whole document, the \layout block contains settings for score-specific layout. To set score layout options globally, enter them in a toplevel \layout block. To set layout options for an individual score, enter them in a \layout block inside the \score block, after the music. Settings that can appear in a \layout block include:
• the layout-set-staff-size scheme function,
• context modifications in \context blocks, and
• \paper variables that affect score layout.

The layout-set-staff-size function is discussed in the next section, Section 4.2.2 [Setting the staff size], page 610. Context modifications are discussed in a separate chapter; see Section 5.1.4 [Modifying context plug-ins], page 663, and Section 5.1.5 [Changing context default settings], page 664.

The \paper variables that can appear in a \layout block, with default values taken from the \paper block are:
• line-width, ragged-right and ragged-last (see \paper variables for widths and margins, page 602)
• indent and short-indent (see [paper variables for shifts and indents], page 604)
• system-count (see [paper variables for line breaking], page 605)

Here is an example \layout block:

\layout {
  \indent = 2\cm
  \context {
    \StaffGroup
      \override StaffGrouper.staff-staff-spacing.basic-distance = #8
  }
  \context {
    \Voice
      \override TextScript.padding = #1
      \override Glissando.thickness = #3
  }
}

Multiple \layout blocks can be entered as toplevel expressions. This can, for example, be useful if different settings are stored in separate files and included optionally. Internally, when a \layout block is evaluated, a copy of the current \layout configuration is made, then any changes defined within the block are applied and the result is saved as the new current configuration. From the user’s perspective the \layout blocks are combined, but in conflicting situations (when the same property is changed in different blocks) the later definitions take precedence.

For example, if this block:

\layout {
  \context {
    \Voice
      \override TextScript.color = #magenta
      \override Glissando.thickness = #1.5
  }
}

is placed after the one from the preceding example the padding and color overrides for TextScript are combined, but the later thickness override for Glissando replaces (or hides) the earlier one.

\layout blocks may be assigned to variables for reuse later, but the way this works is slightly but significantly different from writing them literally.

If a variable is defined like this:

layoutVariable = \layout {
  \context {
    \Voice
      \override NoteHead.font-size = #4
  }
}

it will hold the current \layout configuration with the NoteHead.font-size override added, but this combination is not saved as the new current configuration. Be aware that the ‘current configuration’ is read when the variable is defined and not when it is used, so the content of the variable is dependent on its position in the source.

The variable can then be used inside another \layout block, for example:

\layout {
  \layoutVariable
A `\layout` block containing a variable, as in the example above, does not copy the current configuration but instead uses the content of `\layoutVariable` as the base configuration for the further additions. This means that any changes defined between the definition and the use of the variable are lost.

If `\layoutVariable` is defined (or `\include`) immediately before being used, its content is just the current configuration plus the overrides defined within it. So in the example above showing the use of `\layoutVariable` the final `\layout` block would consist of:

```latex
TextScript.padding = #1
TextScript.color = #magenta
Glissando.thickness = #1.5
NoteHead.font-size = #4
NoteHead.color = #red
```

plus the indent and the `StaffGrouper` overrides.

But if the variable had already been defined before the first `\layout` block the current configuration would now contain only

```latex
NoteHead.font-size = #4 % (written in the variable definition)
NoteHead.color = #red % (added after the use of the variable)
```

If carefully planned, `\layout` variables can be a valuable tool to structure the layout design of sources, and also to reset the `\layout` configuration to a known state.

**See also**

Notation Reference: Section 5.1.5 [Changing context default settings], page 664.

Snippets: Section “Spacing” in Snippets.

### 4.2.2 Setting the staff size

The default staff size is 20 points, which corresponds to a staff height of 7.03mm (one point is equal to 100/7227 of an inch, or 2540/7227 mm). The staff size may be changed in three ways:

1. To set the staff size globally for all scores in a file (or in a `\book` block, to be precise), use `set-global-staff-size`:
   ```latex
   #(set-global-staff-size 14)
   ```
   The above example sets the global default staff size to 14pt (4.92mm) and scales all fonts accordingly.

2. To set the staff size for a single score within a book, use `layout-set-staff-size` inside that score’s `\layout` block:
   ```latex
   \score {
     ...
     \layout {
       #(layout-set-staff-size 14)
     }
   }
   ```

3. To set the staff size for a single staff within a system, use the `\magnifyStaff` command. For example, traditionally engraved chamber music scores with piano often used 7mm piano
staves while the other staves were typically between 3/5 and 5/7 as large (between 60% and 71%). To achieve the 5/7 proportion, use:

\score {
  <<
    \new Staff \with {
      \magnifyStaff #5/7
    } { ... }
    \new PianoStaff { ... }
  >>
}

If you happen to know which fontSize you wish to use, you could use the following form:

\score {
  <<
    \new Staff \with {
      \magnifyStaff #(magstep -3)
    } { ... }
    \new PianoStaff { ... }
  >>
}

To emulate the look of traditional engraving, it is best to avoid reducing the thickness of the staff lines.

**Automatic font weight at different sizes**

The Emmentaler font provides the set of *Feta* musical glyphs in eight different sizes; each one tuned for a different staff size. The smaller the glyph size, the “heavier” it becomes, so as to match the relatively thicker staff lines. Recommended glyphs sizes are listed in the following table:

<table>
<thead>
<tr>
<th>font name</th>
<th>staff height (pt)</th>
<th>staff height (mm)</th>
<th>use</th>
</tr>
</thead>
<tbody>
<tr>
<td>feta11</td>
<td>11.22</td>
<td>3.9</td>
<td>pocket scores</td>
</tr>
<tr>
<td>feta13</td>
<td>12.60</td>
<td>4.4</td>
<td></td>
</tr>
<tr>
<td>feta14</td>
<td>14.14</td>
<td>5.0</td>
<td></td>
</tr>
<tr>
<td>feta16</td>
<td>15.87</td>
<td>5.6</td>
<td></td>
</tr>
<tr>
<td>feta18</td>
<td>17.82</td>
<td>6.3</td>
<td>song books</td>
</tr>
<tr>
<td>feta20</td>
<td>20</td>
<td>7.0</td>
<td>standard parts</td>
</tr>
<tr>
<td>feta23</td>
<td>22.45</td>
<td>7.9</td>
<td></td>
</tr>
<tr>
<td>feta26</td>
<td>25.2</td>
<td>8.9</td>
<td></td>
</tr>
</tbody>
</table>

Snippets: Section “Spacing” in Snippets.

**Known issues and warnings**

When using \magnifyStaff only for some staves in a StaffGroup, BarLine grobs do not align any more, due to the changed BarLine properties thick-thickness, hair-thickness and kern.

\new StaffGroup

<<
  \new Staff \with { \magnifyStaff #1/2 } { b1 \bar "|." }
  \new Staff { b }
>>
You may want to cancel magnifying BarLine grobs, mimick them on the other staves or apply intermediate values for every Staff.

\begin{verbatim}
\define bar-line-props '((BarLine thick-thickness) (BarLine hair-thickness) (BarLine kern))

mus = { b1 \bar "."}

\markup "Cancel \magnifyStaff for bar lines:"
\new StaffGroup <<
   \new Staff
   \with { \magnifyStaff 1/2 #(revert-props \magnifyStaff 0 bar-line-props)}
   \mus
   \new Staff
   \mus
>>

\markup "Mimick \magnifyStaff on other staves:"
\new StaffGroup <<
   \new Staff
   \with { \magnifyStaff 1/2 } \mus
   \new Staff
   \with { #(scale-props \magnifyStaff 1/2 t bar-line-props)} \mus
>>

\markup "Apply an intermediate value to all staves:"
\new StaffGroup <<
   \new Staff
   \with { \magnifyStaff 1/2
            #(scale-props \magnifyStaff 3/2 t bar-line-props)} \mus
   \new Staff
4.3 Breaks

4.3.1 Line breaking

Line breaks are normally determined automatically. They are chosen so that lines look neither cramped nor loose, and consecutive lines have similar density.

To manually force a line break at a bar line, use the \break command:

\relative c' {  
  c4 c c c | \break  
  c4 c c c |  
}

\mus

Cancel \magnifyStaff for bar lines:

Mimick \magnifyStaff on other staves:

Apply an intermediate value to all staves:
By default, breaks are only allowed at bar lines. There are also a few other factors that can prevent a break from being allowed at a certain bar line:

- a note head or rest continuing over the bar line,
- the presence of an ‘unbreakable’ spanner, such as a beam or a glissando, crossing the bar line.

The \break command forces a break in all cases, regardless of the presence of a bar line or any other factor. It is also possible to bypass all these factors using the \allowBreak command. In the following example, breaks are allowed everywhere, even in the middle of a measure, and despite the presence of beams.

\repeat unfold 56 { c'8 \allowBreak }

If you find yourself using \allowBreak often, you may want to prevent some of the factors mentioned above from disabling breaks.

- Bar_engraver forbids breaks between bar lines when forbidBreakBetweenBarLines is set to true. To inhibit this, set the property to false.

\layout {
  \context {
    \Score
      forbidBreakBetweenBarLines = ##f
  }
}

\fixed c' {
  c4 d
}

- Note heads and rests extending over bar lines can be made not to suppress breaks by removing the Forbid_line_break_engraver from the Voice context.

\new Voice \with {
  \remove Forbid_line_break_engraver
} \relative {
  c''2. \tuplet 3/2 { c4 c c } c2.
}
The presence of beams and other unbreakable spanners over bar lines is ignored if their breakable property is set to true.

\relative c'' {
  \override Beam.breakable = ##t
  c2. c8[ c  |
  c8 c] c2. |
}

The \noBreak command will prevent a line break at the bar line where it is inserted.

Within a score, automatic line breaking is prevented within music lying between \autoLineBreaksOff and \autoLineBreaksOn commands. If automatic page breaks should also be prevented, the commands \autoBreaksOff and \autoBreaksOn should be used. Manual breaks are unaffected by these commands. Note that inhibiting automatic line breaks may cause music to run over the right margin if it cannot all be contained within one line.

Automatic line breaks (but not page breaks) may be enabled at single bar lines by using \once \autoLineBreaksOn at a bar line. This identifies a permitted rather than a forced line break.

The most basic settings influencing line spacing are indent and line-width. They are set in the \layout block. They control the indentation of the first line of music, and the lengths of the lines.

If ragged-right is set to true in the \layout block, then systems end at their natural horizontal length, instead of being spread horizontally to fill the whole line. This is useful for short fragments, and for checking how tight the natural spacing is.

The option ragged-last is similar to ragged-right, but affects only the last line of the piece.

\layout {
  indent = 0\mm
  line-width = 150\mm
  ragged-last = ##t
}

For line breaks at regular intervals use \break separated by skips and repeated with \repeat. For example, this would cause the following 28 measures (assuming 4/4 time) to be broken every 4 measures, and only there:

<<
  \repeat unfold 7 {

**Predefined commands**

\break, \allowBreak, \noBreak, \autoBreaksOff, \autoBreaksOn, \autoLineBreaksOff, \autoLineBreaksOn.

**Selected Snippets**

**Using an extra voice for breaks**

Often it is easier to manage line and page-breaking information by keeping it separate from the music by introducing an extra voice containing only skips along with the \break, pageBreak and other layout information.

This pattern becomes especially helpful when overriding line-break-system-details and the other useful but long properties of NonMusicalPaperColumnGrob.

\music = \relative c' \{ c4 c c c \}

\score {
\new Staff <<
\new Voice {
  s1 * 2 \break
  s1 * 3 \break
  s1 * 6 \break
  s1 * 5 \break
}
\new Voice {
  \repeat unfold 2 \{ \music \}
  \repeat unfold 3 \{ \music \}
  \repeat unfold 6 \{ \music \}
  \repeat unfold 5 \{ \music \}
}
}

Notation Reference: \[\text{\textbackslash paper variables for line breaking}\], page 605, Section 4.2.1 \[The \textbackslash layout block\], page 608.

Snippets: Section “Spacing” in Snippets.

Internals Reference: Section “LineBreakEvent” in Internals Reference.

Known issues and warnings

Placing \autoLineBreaksOff or \autoBreaksOff before any music will cause error messages to appear. Always place these commands after some music.

4.3.2 Page breaking

This section describes the different page breaking methods, and how to modify them.

Manual page breaking

The default page breaking may be overridden by inserting \pageBreak or \noPageBreak commands. These commands are analogous to \break and \noBreak. They should be inserted at a bar line. These commands force and forbid a page break from happening at that bar line. Of course, the \pageBreak command also forces a line break.

The \pageBreak and \noPageBreak commands may also be inserted at top-level, between scores and top-level markups.

Within a score, automatic page breaks are prevented within music lying between \autoPageBreaksOff and \autoPageBreaksOn commands. Manual page breaks are unaffected by these commands.

There are also analogous settings to ragged-right and ragged-last which have the same effect on vertical spacing. If ragged-bottom is set to \#t the systems will not be justified vertically. When ragged-last-bottom is set to \#t, as it is by default, empty space is allowed at the bottom of the final page (or the final page in each \bookpart). See Section 4.1.3 \[Fixed vertical spacing \textbackslash paper variables\], page 599.

Page breaks are computed by the page-breaking function. LilyPond provides several algorithms for computing page breaks, including ly:optimal-breaking, ly:page-turn-breaking and ly:minimal-breaking. The default is ly:optimal-breaking, but the value can be changed in the \paper block:

\begin{verbatim}
\paper {
  page-breaking = #ly:page-turn-breaking
}
\end{verbatim}

When a book has many scores and pages, the page breaking problem may be difficult to solve, requiring large processing time and memory. To ease the page breaking process, \bookpart blocks are used to divide the book into several parts: the page breaking occurs separately on each part. Different page breaking functions may also be used in different book parts.

\begin{verbatim}
\bookpart {
  \header {
    subtitle = "Preface"
  }
  \paper {
    % In a part consisting mostly of text,
    \page-breaking = #ly:page-turn-breaking
  }
}\end{verbatim}
Predefined commands
\pageBreak, \noPageBreak, \autoPageBreaksOn, \autoPageBreaksOff.

See also
Notation Reference: [\paper variables for page breaking], page 605.
Snippets: Section “Spacing” in Snippets.

Known issues and warnings
The \once prefix is ineffective with \autoPageBreaksOn and \autoPageBreaksOff. If auto page breaking is off and is then turned on to permit a page break, it must remain on for a few bars (the precise number of bars depends on the score) before being turned off, else the opportunity to break the page will not be taken.

Optimal page breaking
The ly:optimal-breaking function is LilyPond’s default method of determining page breaks. It attempts to find a page breaking that minimizes cramping and stretching, both horizontally and vertically. Unlike ly:page-turn-breaking, it has no concept of page turns.

See also
Snippets: Section “Spacing” in Snippets.

Minimal page breaking
The ly:minimal-breaking function performs minimal computations to calculate the page breaking: it fills a page with as many systems as possible before moving to the next one. Thus, it may be preferred for scores with many pages, where the other page breaking functions could be too slow or memory demanding, or a lot of texts. It is enabled using:

\paper {
    page-breaking = #ly:minimal-breaking
}
Chapter 4: Spacing issues

One-page page breaking

The ly:one-page-breaking function is a special-purpose page breaking algorithm that automatically adjusts the page height to fit the music, so that everything fits on a single page. The paper-height variable in the paper block is ignored, but other settings work as usual. In particular, the spacing between the last system (or top level markup) and the footer can be customized with last-bottom-spacing in the paper block. The width of the page is left unmodified by default but can be set with paper-width in the paper block.

Known issues and warnings

ly:one-page-breaking is not currently compatible with \bookpart.

One-line page breaking

The ly:one-line-breaking function is a special-purpose page breaking algorithm that puts each score on its own page, and on a single line. No titles or margins are typeset; only the score is displayed.

The page width is adjusted so that the longest score fits on one line. In particular, paper-width, line-width and indent variables in the \paper block are ignored, although left-margin and right-margin are still honored. The height of the page is left unmodified.

One-line-auto-height page breaking

The ly:one-line-auto-height-breaking function works just like ly:one-line-breaking except the page height is automatically modified to fit the height of the music. Specifically, the paper-height variable in the \paper block is set so that it spans the height of the tallest score plus the top-margin and bottom-margin.

Note that the top-system-spacing setting will affect the vertical position of the music. Set it to \#f in a paper block to simply place the music between the top and bottom margins.

Optimal page turning

Often it is necessary to find a page breaking configuration so that there is a rest at the end of every second page. This way, the musician can turn the page without having to miss notes. The ly:page-turn-breaking function attempts to find a page breaking minimizing cramping and stretching, but with the additional restriction that it is only allowed to introduce page turns in specified places.

There are two steps to using this page breaking function. First, you must enable it in the \paper block, as explained in Section 4.3.2 [Page breaking], page 617. Then you must tell the function where you would like to allow page breaks.

There are two ways to achieve the second step. First, you can specify each potential page turn manually, by inserting \allowPageTurn into your input file at the appropriate places.

If this is too tedious, you can add a Page_turn_engraver to a Staff or Voice context. The Page_turn_engraver will scan the context for sections without notes (note that it does not scan for rests; it scans for the absence of notes. This is so that single-staff polyphony with rests in one of the parts does not throw off the Page_turn_engraver). When it finds a sufficiently long section without notes, the Page_turn_engraver will insert an \allowPageTurn at the final bar line in that section, unless there is a ‘special’ bar line (such as a double bar), in which case the \allowPageTurn will be inserted at the final ‘special’ bar line in the section.

The Page_turn_engraver reads the context property minimumPageTurnLength to determine how long a note-free section must be before a page turn is considered. The default value for minimumPageTurnLength is (ly:make-moment 1/1). If you want to disable page turns, set it to something ‘very large’.

\new Staff \with { \consists Page_turn_engraver }
{  
a4 b c d |
R1 | % a page turn will be allowed here
a4 b c d |
\set Staff.minimumPageTurnLength = #(ly:make-moment 5/2)
R1 | % a page turn will not be allowed here
a4 b r2 |
R1*2 | % a page turn will be allowed here
a1
}

When using volta repeats, the Page_turn_ engraver will only allow a page turn during the repeat if there is enough time at the beginning and end of the repeat to turn the page back. If the repeat is too short then the Page_turn_ engraver can be used to \textit{disable} page turns by setting an appropriate value for the context property minimumRepeatLengthForPageTurn. In this case the Page_turn_ engraver will only allows turns in repeats whose duration is longer than the value specified.

The page turning commands, \pageTurn, \noPageTurn and \allowPageTurn, may also be used at top-level, in top-level markups and between scores.

**Predefined commands**

\pageTurn, \noPageTurn, \allowPageTurn.

**See also**

Notation Reference: [\paper variables for line breaking], page 605.

Snippets: Section “Spacing” in Snippets.

**Known issues and warnings**

Use only one Page_turn_ engraver per score. If there are more, they will interfere with each other.

**See also**

Notation Reference: Section 4.4 [Vertical spacing], page 620.

Snippets: Section “Spacing” in Snippets.

### 4.4 Vertical spacing

Vertical spacing is controlled by three things: the amount of space available (i.e., paper size and margins), the amount of space between systems, and the amount of space between staves inside a system.

#### 4.4.1 Flexible vertical spacing within systems

Three separate mechanisms control the flexible vertical spacing within systems, one for each of the following categories:

- \textit{ungrouped staves},
- \textit{grouped staves} (staves within a staff group such as ChoirStaff, etc.), and
- \textit{non-staff lines} (such as Lyrics, ChordNames, etc.).

The height of each system is determined in two steps. First, all of the staves are spaced according to the amount of space available. Then, the non-staff lines are distributed between the staves.
Note that the spacing mechanisms discussed in this section only control the vertical spacing of staves and non-staff lines within individual systems. The vertical spacing between separate systems, scores, markups, and margins is controlled by \paper variables, which are discussed in Section 4.1.4 [Flexible vertical spacing \paper variables], page 600.

**Within-system spacing properties**

The within-system vertical spacing mechanisms are controlled by two sets of grob properties. The first set is associated with the \VerticalAxisGroup grob, which is created by all staves and non-staff lines. The second set is associated with the \StaffGrouper grob, which can be created by staff groups, but only if explicitly called. These properties are described individually at the end of this section.

The names of these properties (except for \staff-affinity) follow the format item1-item2-spacing, where item1 and item2 are the items to be spaced. Note that item2 is not necessarily below item1; for example, nonstaff-relatedstaff-spacing will measure upwards from the non-staff line if \staff-affinity is UP.

Each distance is measured between the reference points of the two items. The reference point for a staff is the vertical center of its StaffSymbol (i.e., the middle line if line-count is odd; the middle space if line-count is even). The reference points for individual non-staff lines are given in the following table:

<table>
<thead>
<tr>
<th>Non-staff line</th>
<th>Reference point</th>
</tr>
</thead>
<tbody>
<tr>
<td>ChordNames</td>
<td>baseline</td>
</tr>
<tr>
<td>NoteNames</td>
<td>baseline</td>
</tr>
<tr>
<td>Lyrics</td>
<td>baseline</td>
</tr>
<tr>
<td>Dynamics</td>
<td>mid-height of 'm'</td>
</tr>
<tr>
<td>FiguredBass</td>
<td>highest point</td>
</tr>
<tr>
<td>FretBoards</td>
<td>top line</td>
</tr>
</tbody>
</table>

In the following image, horizontal lines indicate the positions of these reference points:

```latex
\begin{align*}
\text{baseline} & \quad \text{ChordNames} & \quad \text{NoteNames} & \quad \text{Lyrics} \\
\text{mid-height} & \quad \text{Dynamics} & \quad \text{fp} \\
\text{highest point} & \quad \text{FiguredBass} \\
\text{top line} & \quad \text{FretBoards}
\end{align*}
```

Each of the vertical spacing grob properties (except \staff-affinity) uses the same alist structure as the \paper spacing variables discussed in Section 4.1.4 [Flexible vertical spacing \paper variables], page 600. Specific methods for modifying alists are discussed in Section 5.3.7 [Modifying alists], page 688. Grob properties should be adjusted with an \override inside a \score or \layout block, and not inside a \paper block.

The following example demonstrates the two ways these alists can be modified. The first declaration updates one key value individually, and the second completely redefines the property:

```latex
\new Staff \with {
    \override VerticalAxisGroup.
default-staff-staff-spacing.basic-distance = #10
} { ... }
```
To change any spacing settings globally, put them in the `\layout` block:

```latex
\layout {
  \context {\Staff {\override VerticalAxisGroup.default-staff-staff-spacing = #'((basic-distance . 10)
   (minimum-distance . 9)
   (padding . 1)
   (stretchability . 10))}
  }
}
```

Standard settings for the vertical spacing grob properties are listed in Section “Vertical-AxisGroup” in Internals Reference and Section “StaffGrouper” in Internals Reference. Default overrides for specific types of non-staff lines are listed in the relevant context descriptions in Section “Contexts” in Internals Reference.

**Properties of the VerticalAxisGroup grob**

VerticalAxisGroup properties are typically adjusted with an `\override` at the Staff level (or equivalent).

**staff-staff-spacing**

Used to determine the distance between the current staff and the staff just below it in the same system, even if one or more non-staff lines (such as Lyrics) are placed between the two staves. Does not apply to the bottom staff of a system.

Initially, the staff-staff-spacing of a VerticalAxisGroup is a Scheme function that applies the properties of the StaffGrouper if the staff is part of a group, or the default-staff-staff-spacing of the staff otherwise. This allows staves to be spaced differently when they are grouped. For uniform spacing regardless of grouping, this function may be replaced by a flexible-spacing alist, using the complete-redefinition form of override shown above. If only some values are specified in an override, missing values will be taken from default-staff-staff-spacing (if it has values for them).

**default-staff-staff-spacing**

A flexible-spacing alist defining the staff-staff-spacing used for ungrouped staves, unless staff-staff-spacing has been explicitly set with an `\override`.

**staff-affinity**

The direction of the staff to use for spacing the current non-staff line. Choices are UP, DOWN, and CENTER. If CENTER, the non-staff line will be placed equidistant between the two nearest staves on either side, unless collisions or other spacing constraints prevent this. Adjacent non-staff lines should have non-increasing staff-affinity from top to bottom, e.g., a non-staff line set to UP should not immediately follow one that is set to DOWN. Non-staff lines at the top of a system should use DOWN; those at the bottom should use UP. Setting staff-affinity for a staff causes it to be treated as a non-staff line. Setting staff-affinity to #f causes a non-staff line to
be treated as a staff. Setting staff-affinity to UP, CENTER, or DOWN causes a staff to be spaced as a non-staff line.

**nonstaff-relatedstaff-spacing**

The distance between the current non-staff line and the nearest staff in the direction of staff-affinity, if there are no non-staff lines between the two, and staff-affinity is either UP or DOWN. If staff-affinity is CENTER, then nonstaff-relatedstaff-spacing is used for the nearest staves on both sides, even if other non-staff lines appear between the current one and either of the staves. This means that the placement of a non-staff line depends on both the surrounding staves and the surrounding non-staff lines. Setting the stretchability of one of these types of spacing to a small value will make that spacing dominate. Setting the stretchability to a large value will make that spacing have little effect.

**nonstaff-nonstaff-spacing**

The distance between the current non-staff line and the next non-staff line in the direction of staff-affinity, if both are on the same side of the related staff, and staff-affinity is either UP or DOWN.

**nonstaff-unrelatedstaff-spacing**

The distance between the current non-staff line and the staff in the opposite direction from staff-affinity, if there are no other non-staff lines between the two, and staff-affinity is either UP or DOWN. This can be used, for example, to require a minimum amount of padding between a Lyrics line and the staff to which it does not belong.

**Properties of the StaffGrouper grob**

StaffGrouper properties are typically adjusted with an \override at the StaffGroup level (or equivalent).

**staff-staff-spacing**

The distance between consecutive staves within the current staff group. The staff-staff-spacing property of an individual staff’s VerticalAxisGroup grob can be overridden with different spacing settings for that staff.

**staffgroup-staff-spacing**

The distance between the last staff of the current staff group and the staff just below it in the same system, even if one or more non-staff lines (such as Lyrics) exist between the two staves. Does not apply to the bottom staff of a system. The staff-staff-spacing property of an individual staff’s VerticalAxisGroup grob can be overridden with different spacing settings for that staff.

Notation Reference: Section 4.1.4 [Flexible vertical spacing \paper variables], page 600, Section 5.3.7 [Modifying alists], page 688.

Internals Reference: Section “Contexts” in Internals Reference, Section “VerticalAxisGroup” in Internals Reference, Section “StaffGrouper” in Internals Reference.

**Spacing of ungrouped staves**

**Staves** (such as Staff, DrumStaff, TabStaff, etc.) are contexts that can contain one or more voice contexts, but cannot contain any other staves.

The following properties affect the spacing of ungrouped staves:
• VerticalAxisGroup properties:
  
  • default-staff-staff-spacing
  
  • staff-staff-spacing

These grob properties are described individually above; see [Within-system spacing properties], page 621.

Additional properties are involved for staves that are part of a staff group; see [Spacing of grouped staves], page 625.

The following example shows how the default-staff-staff-spacing property can affect the spacing of ungrouped staves. The same overrides applied to staff-staff-spacing would have the same effect, but would also apply in cases where the staves are combined in a group or groups.

```latex
\layout {
  \context {
    \Staff {
      \override VerticalAxisGroup.default-staff-staff-spacing = '#((basic-distance . 8)
      (minimum-distance . 7)
      (padding . 1))
    }
  }
}

<<
% The very low note here needs more room than 'basic-distance
% can provide, so the distance between this staff and the next
% is determined by 'padding.
\new Staff { b,2 r | }

% Here, 'basic-distance provides enough room, and there is no
% need to compress the space (towards 'minimum-distance) to make
% room for anything else on the page, so the distance between
% this staff and the next is determined by 'basic-distance.
\new Staff { \clef bass g2 r | }

% By setting 'padding to a negative value, staves can be made to
% collide. The lowest acceptable value for 'basic-distance is 0.
\new Staff \with {
  \override VerticalAxisGroup.default-staff-staff-spacing = '#((basic-distance . 3.5)
  (padding . -10))
} { \clef bass g2 r | }
\new Staff { \clef bass g2 r | }
>>
```
Spacing of grouped staves

In orchestral and other large scores, it is common to place staves in groups. The space between groups is typically larger than the space between staves of the same group.

Staff-groups (such as StaffGroup, ChoirStaff, etc.) are contexts that can contain one or more staves simultaneously.

The following properties affect the spacing of staves inside staff groups:

- VerticalAxisGroup properties:
  - staff-staff-spacing
- StaffGrouper properties:
  - staff-staff-spacing
  - staffgroup-staff-spacing

These grob properties are described individually above; see “Within-system spacing properties”, page 621.

The following example shows how properties of the StaffGrouper grob can affect the spacing of grouped staves:

```
\layout {
  \context {
    \Score
    \override StaffGrouper.staff-staff-spacing.padding = #0
    \override StaffGrouper.staff-staff-spacing.basic-distance = #1
  }
}

<<
\new PianoStaff \with {
  \override StaffGrouper
    .staffgroup-staff-spacing
    .basic-distance = #20
}
<<
\new Staff { c'1 }
\new Staff { c'1 }
>>

\new StaffGroup <<
Spacing of non-staff lines

Non-staff lines (such as Lyrics, ChordNames, etc.) are contexts whose layout objects are engraved like staves (i.e., in horizontal lines within systems). Specifically, non-staff lines are non-staff contexts that contain the Section “Axis_group_engraver” in Internals Reference.

The following properties affect the spacing of non-staff lines:

- **VerticalAxisGroup properties:**
  - staff-affinity
  - nonstaff-relatedstaff-spacing
  - nonstaff-nonstaff-spacing
  - nonstaff-unrelatedstaff-spacing

  These grob properties are described individually above; see [Within-system spacing properties], page 621.

  The following example shows how the nonstaff-nonstaff-spacing property can affect the spacing of consecutive non-staff lines. Here, by setting the stretchability key to a very high value, the lyrics are able to stretch much more than usual:

\begin{verbatim}
\layout {
  \context {
    \Lyrics
    \override VerticalAxisGroup.
      .nonstaff-nonstaff-spacing 
      .stretchability = #1000
  }
}
\end{verbatim}
\new StaffGroup
<<
\new Staff \with { 
  \override VerticalAxisGroup.staff-staff-spacing = 
    #'((basic-distance . 30)) 
} { c'1 } 
\new Lyrics \with { 
  \override VerticalAxisGroup.staff-affinity = #UP 
} \lyricmode { up } 
\new Lyrics \with { 
  \override VerticalAxisGroup.staff-affinity = #CENTER 
} \lyricmode { center } 
\new Lyrics \with { 
  \override VerticalAxisGroup.staff-affinity = #DOWN 
} \lyricmode { down } 
\new Staff { c'1 } 
>>

4.4.2 Explicit staff and system positioning

One way to understand the flexible vertical spacing mechanisms explained above is as a collection of settings that control the amount of vertical padding between staves and systems.

It is possible to approach vertical spacing in a different way using property NonMusicalPaperColumn.line-break-system-details. While the flexible vertical spacing mechanisms specify vertical padding, NonMusicalPaperColumn.line-break-system-details can specify exact vertical positions on the page.

NonMusicalPaperColumn.line-break-system-details accepts an associative list of four different settings:
- X-offset
- Y-offset
- extra-offset
- alignment-distances
To understand how each of these different settings work, we begin by looking at an example that includes no overrides at all.

\header { tagline = ##f }
\paper { left-margin = 0\mm }
\book {
  \score {
    <<
      \new Staff <<
        \new Voice {
          s1\!\*5 \break
          s1\!\*5 \break
          s1\!\*5 \break
        }
        \new Voice { \repeat unfold 15 { c'4 c' c' c' } }
      >>
    \new Staff {
      \repeat unfold 15 { d'4 d' d' d' }
    }
  }
}
This score isolates both line breaking and page breaking information in a dedicated voice. This technique of creating a breaks voice will help keep layout separate from music entry as our example becomes more complicated. Also see Section 4.3 [Breaks], page 613.

By using explicit \break commands, the music is divided into five measures per line. Vertical spacing is from LilyPond’s own defaults but the vertical startpoint of each system is set explicitly using the Y-offset pair in the line-break-system-details attribute of the NonMusicalPaperColumn grob:

\header { tagline = ##f }
\paper { left-margin = 0\mm }
\book {
  \score {
    \new Staff <<
    \new Voice {
      \once \override Score.NonMusicalPaperColumn.
        line-break-system-details = #'((Y-offset . 0))
      s1*5 \break
      \once \override Score.NonMusicalPaperColumn.
        line-break-system-details = #'((Y-offset . 40))
      s1*5 \break
      \once \override Score.NonMusicalPaperColumn.
        line-break-system-details = #'((Y-offset . 60))
      s1*5 \break
    }
    \new Voice { \repeat unfold 15 { c'4 c' c' c' } }
    \new Staff {
      \repeat unfold 15 { d'4 d' d' d' }
    }
  }
Note that `line-break-system-details` takes an associative list of potentially many values, but that we set only one value here. Note, too, that the `Y-offset` property here determines the exact vertical position on the page at which each new system will render.

In contrast to the absolute positioning available through `Y-offset` and `X-offset`, relative positioning is possible with the `extra-offset` property of `line-break-system-details`. Placement is relative to the default layout or to the absolute positioning created by setting `X-offset` and `Y-offset`. The property `extra-offset` accepts a pair consisting of displacements along the X-axis and Y-axis.

```latex
\header { tagline = ##f }
\paper { left-margin = 0\mm }
\book {
\score {
<<
\new Staff <<
\new Voice {
\s1*5 \break
\once \override Score .NonMusicalPaperColumn .line-break-system-details = #'((extra-offset . (0 . 10)))
\s1*5 \break
\once \override Score .NonMusicalPaperColumn .line-break-system-details = #'((extra-offset . (0 . 10)))
```
Now that we have set the vertical startpoint of each system explicitly, we can also set the vertical distances between staves within each system manually. We do this using the alignment-distances subproperty of line-break-system-details.

\header { tagline = ##f }
\paper { left-margin = 0\mm }
\book { 
\score {
  <<
  \new Staff <<
  \new Voice {
    \once \override Score .NonMusicalPaperColumn
    .line-break-system-details
    = #'(Y-offset . 20)
      (alignment-distances . (10))
  }
  s1*5 \break
  \once \override Score
}
}
.NonMusicalPaperColumn
.line-break-system-details
= #'((Y-offset . 60)
   (alignment-distances . (15)))
\once \override
Score
 .NonMusicalPaperColumn
 .line-break-system-details
 = #'((Y-offset . 85)
   (alignment-distances . (20)))
\new Voice { \repeat unfold 15 { c'4 c' c' c' } }
\new Staff {
   \repeat unfold 15 { d'4 d' d' d' }
}
\new Staff {
   \repeat unfold 15 { d'4 d' d' d' }
}
Note that here we assign two different values to the line-break-system-details attribute of the NonMusicalPaperColumn grob. Though the line-break-system-details attribute alist accepts many additional spacing parameters (including, for example, a corresponding X-offset pair), we need only set the Y-offset and alignment-distances pairs to control the vertical startpoint of every system and every staff. Finally, note that alignment-distances specifies the vertical positioning of staves but not of staff groups.

\header { tagline = ##f } 
\paper { left-margin = 0\mm } 
\book {
\score {
  <<
  \new Staff <<
  \new Voice {
    \once \override Score .NonMusicalPaperColumn
    .line-break-system-details
    = #'((Y-offset . 0)
      (alignment-distances . (30 10)))
    s1*5 \break
    \once \override Score .NonMusicalPaperColumn
    .line-break-system-details
    = #'((Y-offset . 60)
      (alignment-distances . (10 10)))
    s1*5 \break
    \once \override Score .NonMusicalPaperColumn
    .line-break-system-details
    = #'((Y-offset . 100)
      (alignment-distances . (10 30)))
    s1*5 \break
  }
  \new Voice { \repeat unfold 15 { c'4 c' c' c' } } 
  >>
  \new StaffGroup <<
  \new Staff { \repeat unfold 15 { d'4 d' d' d' } } 
  \new Staff { \repeat unfold 15 { e'4 e' e' e' } } 
  >>
  >>
}
Some points to consider:

- When using alignment-distances, lyrics and other non-staff lines do not count as a staff.
- The units of the numbers passed to X-offset, Y-offset, extra-offset and alignment-distances are interpreted as multiples of the distance between adjacent staff lines. Positive values move staves and lyrics up, negative values move staves and lyrics down.
Because the NonMusicalPaperColumn.line-break-system-details settings given here allow the positioning of staves and systems anywhere on the page, it is possible to violate paper or margin boundaries or even to print staves or systems on top of one another. Reasonable values passed to these different settings will avoid this.

### 4.4.3 Vertical collision avoidance

Intuitively, there are some objects in musical notation that belong to the staff and there are other objects that should be placed outside the staff. Objects belonging outside the staff include things such as rehearsal marks, text and dynamic markings (from now on, these will be called outside-staff objects). LilyPond’s rule for the vertical placement of outside-staff objects is to place them as close to the staff as possible but not so close that they collide with another object.

LilyPond uses the outside-staff-priority property to determine whether a grob is an outside-staff object: if outside-staff-priority is a number, the grob is an outside-staff object. In addition, outside-staff-priority tells LilyPond in which order the objects should be placed.

First, LilyPond places all the objects that do not belong outside the staff. Then it sorts the outside-staff objects according to their outside-staff-priority (in increasing order). One by one, LilyPond takes the outside-staff objects and places them so that they do not collide with any objects that have already been placed. That is, if two outside-staff grobs are competing for the same space, the one with the lower outside-staff-priority will be placed closer to the staff.

A listing of defaults for outside-staff-priority may be found in Section A.19 [Default values for outside-staff-priority], page 829.

```latex
\relative c'' { 
    c4_"Text"\pp 
    r2. 
    \once \override TextScript.outside-staff-priority = #1 
    c4_"Text"\pp \% this time the text will be closer to the staff 
    r2. 
    \% by setting outside-staff-priority to a non-number, 
    \% we disable the automatic collision avoidance 
    \once \override TextScript.outside-staff-priority = ##f 
    \once \override DynamicLineSpanner.outside-staff-priority = ##f 
    c4_"Text"\pp \% now they will collide 
}
```

The vertical padding around outside-staff objects can be controlled with property outside-staff-padding.

```latex
\relative { 
    \once \override TextScript.outside-staff-padding = #0 
    a'4="outside-staff-padding = #0" 
    \once \override TextScript.outside-staff-padding = #3 
    d="outside-staff-padding = #3"
```
By default, outside-staff objects are placed so they avoid a horizontal collision with previously-positioned grobs. This can lead to situations in which objects are placed close to each other horizontally. As shown in the example below, setting `outside-staff-horizontal-padding` increases the horizontal spacing required, and in this case moves the text up to prevent it from getting too close to the ledger lines.

```latex
\relative { 
  \c'4 "Word" c c'2 
  R1
  \once \override TextScript.outside-staff-horizontal-padding = #1 
  \c,,4 "Word" c c'2 
} 
```

Snippets: Section “Spacing” in Snippets.

### 4.5 Horizontal spacing

#### 4.5.1 Horizontal spacing overview

The spacing engine translates differences in durations into stretchable distances (‘springs’) of differing lengths. Longer durations get more space, shorter durations get less. The shortest durations get a fixed amount of space (which is controlled by `shortest-duration-space` in the Section “SpacingSpanner” in Internals Reference object). The longer the duration, the more space it gets: doubling a duration adds `spacing-increment` of space to the note.

For example, the following piece contains lots of half, quarter, and 8th notes; the eighth note is followed by 1 note head width (NHW). The quarter note is followed by 2 NHW, the half by 3 NHW, etc.

```latex
\relative c' { 
  c2 c4. c8 
  c4. c8 c4. c8 
  c8 c c4 c c 
} 
```
Normally, spacing-increment is set to 1.2 staff space, which is approximately the width of a note head, and shortest-duration-space is set to 2.0, meaning that the shortest note gets 2.4 staff space (2.0 times the spacing-increment) of horizontal space. This space is counted from the left edge of the symbol, so the shortest notes are generally followed by one NHW of space.

If one would follow the above procedure exactly, then adding a single 32nd note to a score that uses 8th and 16th notes, would widen up the entire score a lot. The shortest note is no longer a 16th, but a 32nd, thus adding 1 NHW to every note. To prevent this, the shortest duration for spacing is not the shortest note in the score, but rather the one which occurs most frequently.

The most common shortest duration is determined as follows: in every measure, the shortest duration is determined. The most common shortest duration is taken as the basis for the spacing, with the stipulation that this shortest duration should always be equal to or shorter than an 8th note.

These durations may also be customized. If you set the common-shortest-duration in Section “SpacingSpanner” in Internals Reference, then this sets the base duration for spacing. The maximum duration for this base (normally an 8th), is set through base-shortest-duration.

Notes that are even shorter than the common shortest note are followed by a space that is proportional to their duration relative to the common shortest note. So if we were to add only a few 16th notes to the example above, they would be followed by half a NHW:

```
\relative { c'\'2 c4. c8 | c4. c16[ c ] c4. c8 | c8 c c4 c c }
```

As explained in the Essay on automated music engraving, stem directions will influence spacing (see Section “Optical spacing” in Essay) and can be adjusted using the stem-spacing-correction property of the Section “NoteSpacing” in Internals Reference object (which are generated for every Section “Voice” in Internals Reference context).

The StaffSpacing object (generated in Section “Staff” in Internals Reference context) contains the same property for controlling the stem/bar line spacing.

The following example shows this; once with the default settings and once with an exaggerated adjustment:

Proportional notation is supported; see Section 4.5.6 [Proportional notation], page 645.

See also

Snippets: Section “Spacing” in Snippets.

Internals Reference: Section “SpacingSpanner” in Internals Reference, Section “NoteSpacing” in Internals Reference, Section “StaffSpacing” in Internals Reference, Section “Non-MusicalPaperColumn” in Internals Reference.
**Known issues and warnings**

There is no convenient mechanism to manually override spacing. The following workaround may be used to insert extra space into a score, adjusting the padding value as necessary.

```
\override Score.NonMusicalPaperColumn.padding = #10
```

No workaround exists for decreasing the amount of space.

4.5.2 New spacing section

New sections with different spacing parameters can be started with the `\newSpacingSection` command. This is useful for sections with different notions of ‘long’ and ‘short’ notes. The `\newSpacingSection` command creates a new SpacingSpanner object at that musical moment.

In the following example the time signature change introduces a new section, and the 16ths notes are automatically spaced slightly wider apart.

```
\relative c' { 
  \time 2/4
  c4 c8 c
  c8 c c4 c16[ c c8] c4
  \newSpacingSection
  \time 4/16
  c16[ c c8]
}
```

If the automatic spacing adjustments do not give the required spacing, manual `\override` may be applied to its properties. These must be applied at the same musical moment as the `\newSpacingSection` command itself and will then affect the spacing of all the following music until the properties are changed in a new spacing section, for example:

```
\relative c' { 
  \time 4/16
  c16[ c c8]
  \newSpacingSection
  \override Score.SpacingSpanner.spacing-increment = #2
  c16[ c c8]
  \newSpacingSection
  \revert Score.SpacingSpanner.spacing-increment
  c16[ c c8]
}
```

See also

Snippets: Section “Spacing” in Snippets.

Internals Reference: Section “SpacingSpanner” in Internals Reference.

4.5.3 Changing horizontal spacing globally

Horizontal spacing may be altered with the `base-shortest-duration` property. Here we compare the same music; once without altering the property, and then altered. Larger values of
ly:make-moment will produce smaller music. Note that ly:make-moment constructs a duration, so 1/4 is a longer duration than 1/16.

\score {
  \relative { 
    g'4 e e2 | f4 d d2 | c4 d e f | g4 g g2 |
    g4 e e2 | f4 d d2 | c4 e g g | c,1 |
    d4 d d d | d4 e f2 | e4 e e e | e4 f g2 |
    g4 e e2 | f4 d d2 | c4 e g g | c,1 |
  }
}

\layout {
  \context { 
    \Score 
    \override SpacingSpanner.base-shortest-duration = #(ly:make-moment 1/16)
  }
}

Uniform stretching of tuplets

By default, spacing in tuplets depends on various non-duration factors (such as accidentals, clef changes, etc). To disregard such symbols and force uniform equal-duration spacing, use \Score.SpacingSpanner.uniform-stretching. This property can only be changed at the beginning of a score,

\score { 
  <<
    \new Staff \relative c' { 
      \tuplet 5/4 { c8 c c c c } c8 c c c 
    }
    \new Staff \relative c' { 
      c8 c c c \tuplet 5/4 { c8 c c c c } 
    } 
  >>
  \layout { 
    \context { 
      \Score
      \override SpacingSpanner.uniform-stretching = ##t
    } 
  } 
}

Strict note spacing

When strict-note-spacing is set, notes are spaced without regard for clefs, bar lines, and grace notes,

\override \Score.SpacingSpanner.strict-note-spacing = ##t
\new Staff \relative { 
  c''8[ c \clef alto c \grace { c16 c } c8 c c ] c32[ c ] }

See also

Snippets: Section “Spacing” in Snippets.

4.5.4 Adjusting horizontal spacing for specific layout objects

In addition to the general-purpose parameters of the default spacing algorithm that apply to all elements of the score or spacing section, several properties serve to operate adjustments on a per-object-type-basis. Examples include adjusting the distance from clefs to time signatures, but not from clefs to notes when there is no time signature, or stretching notes further apart in the presence of a printed text so that it does not overlap with the next note. Tweaking these first requires identifying the type of spacing at play.
4.5.4.1 Overview of object-specific horizontal spacing tweaks

Layout objects that have a horizontally fixed position are called *items*, as opposed to *spanners*, and for the purpose of horizontal spacing, are grouped into *columns*. Note heads and rests, forming the main musical material, together with those objects that are logically linked to them – accidentals, articulations, stems, dots, etc. – are all part of ‘musical column’. Prefatory items, such as clefs, time signatures and bar lines, are grouped into ‘non-musical columns’. In the following example, musical items are colored red, while non-musical items are blue.

This example shows that there is an alternation between musical and non-musical columns. The first non-musical column contains a clef and a time signature. The first musical column has a note head with its stem and articulation. The second non-musical column is empty and thus is removed during the layout process. The second musical column has a note again. The third non-musical column contains a clef, a bar line and a rehearsal mark, etc.

Within one column, spacing is fixed. On the other hand, the amount of space between consecutive columns is flexible. As we shall see, the methods to adjust spacing within a column and between columns are different.

4.5.4.2 Spacing between adjacent non-musical items

Within a non-musical column, items are laid out in a specific order. For instance, with the set of items in the picture below, the default order places the breathing sign first, then the clef, then the bar line, the key cancellation and key signature, and finally the time signature (this is controlled by the BreakAlignment.break-align-orders property).

The distance between two adjacent items from the same non-musical column is controlled by the value of the space-alist property of the leftmost one of the two. space-alist has the form of an associative list mapping break align symbols to (spacing-style . value) pairs. A breakable item’s break align symbol is given by the value of its break-align-symbol property; standard choices are listed in Section “break-alignment-interface” in Internals Reference. Spacing styles are listed in Section “break-aligned-interface” in Internals Reference. Among the available options, only extra-space and minimum-space are relevant for tweaking the space between non-musical items. The difference is that extra-space measures the padding from the right of the first object to the left of the second object while minimum-space counts from the left of the first object. Thus, a way to move the bar line farther from the clef is:
space-alist settings, not limited to the two spacing styles described above, are also possible to override the spacing between different columns. However, this kind of spacing is flexible, and does not merely depend on the types of object involved but also their shapes. Methods specific to it are documented in the next section.

See also
Notation Reference: [Using the break-alignable-interface], page 710.
Extending LilyPond: Section “Association lists (alists)” in Extending.

4.5.4.3 Spacing between adjacent columns
Contrary to spacing within one column, spacing between adjacent columns is flexible and stretches or compresses according to the density of music on the line. By default, columns may even overlap in some situations. The following example shows three cases. The second accidental slides behind the bar line, while the third one overlaps with the clef. Also, the tempo marking Presto spans several columns. Observe how the first accidental, which remains within the vertical extent of the bar line on its left, is placed further apart.

These spacing rules can be overridden. This is done by modifying the width and height that an object takes in horizontal spacing. The relevant properties are extra-spacing-width and extra-spacing-height. When unset, an object takes as much space in horizontal spacing as its X-extent and Y-extent properties allow. These are accurate values of its dimensions. The extra-spacing-width and extra-spacing-height properties make an object larger or smaller for computation of horizontal spacing between columns only, but preserve its dimensions for other spacing types.

\textMark "Default"
c'2 2 cis'2 2

extra-spacing-width and extra-spacing-height are pairs of numbers, which are added to the dimensions on each axis. For instance, setting extra-spacing-height to '(-2 . 3) makes the object three units larger on the top, and two units larger on the bottom (limit lowered by 2).

The following example shows how to use extra-spacing-height to change the limit after which accidentals no longer overlap with bar lines.

```music
\relative { 
  \time 1/4
  cis8 8 | dis8 8 | eis8 8 | fis8 8 |
  gis8 8 | ais8 8 | bis8 8 | cis8 8 |
}

{
  \override Accidental.extra-spacing-height = #'(0 . 1.0)
}
```

```music
\override Accidental.extra-spacing-height = #'(0 . 1.0)
```
The value ‘(+inf.0 . -inf.0) for extra-spacing-width or extra-spacing-height removes the object’s presence.

Conversely, an extra-spacing-height of ‘(-inf.0 . +inf.0) makes the object infinitely high, preventing overlap with another column completely. The below example demonstrates this technique on Accidental and MetronomeMark. In the case of MetronomeMark, it is necessary to set extra-spacing-width to ‘(0 . 0) because the default is ‘(+inf.0 . -inf.0), and even an infinitely high object does not take space if it has no width.

Internals Reference: Section “item-interface” in Internals Reference, Section “separation-item-interface” in Internals Reference.
4.5.5 Line width

The most basic settings influencing the spacing are indent and line-width. They are set in the \layout block. They control the indentation of the first line of music, and the lengths of the lines.

If ragged-right is set to true in the \layout block, then systems ends at their natural horizontal length, instead of being spread horizontally to fill the whole line. This is useful for short fragments, and for checking how tight the natural spacing is. The normal default setting is false, but if the score has only one system the default value is true.

The option ragged-last is similar to ragged-right, but only affects the last line of the piece. No restrictions are put on that line. The result is similar to formatting text paragraphs. In a paragraph, the last line simply takes its natural horizontal length.

\layout {
  indent = #0
  line-width = #150
  ragged-last = ##t
}

Snippets: Section “Spacing” in Snippets.

4.5.6 Proportional notation

LilyPond supports proportional notation, a type of horizontal spacing in which each note consumes an amount of horizontal space exactly equivalent to its rhythmic duration. This type of proportional spacing is comparable to horizontal spacing on top of graph paper. Some late 20th- and early 21st-century scores use proportional notation to clarify complex rhythmic relationships or to facilitate the placement of timelines or other graphics directly in the score.

LilyPond supports five different settings for proportional notation, which may be used together or alone:
- proportionalNotationDuration
- uniform-stretching
- strict-note-spacing
- \remove Separating_line_group_engraver
- \override PaperColumn.used = ##t

In the examples that follow, we explore these five different proportional notation settings and examine how these settings interact.

We start with the following one-measure example, which uses classical spacing with ragged-right turned on.

\score {
  <<
    \new RhythmicStaff {
      c2 16 16 16 16 \tuplet 5/4 { 16 16 16 16 16 }
    }
  >>
}
Notice that the half note which begins the measure takes up far less than half of the horizontal space of the measure. Likewise, the sixteenth notes and sixteenth-note quintuplets (or twentieth notes) which end the measure together take up far more than half the horizontal space of the measure.

In classical engraving, this spacing may be exactly what we want because we can borrow horizontal space from the half note and conserve horizontal space across the measure as a whole.

On the other hand, if we want to insert a measured timeline or other graphic above or below our score, we need proportional notation. We turn proportional notation on with the proportionalNotationDuration setting.

```
\score {
  \new RhythmicStaff {
    c2 16 16 16 \tuplet 5/4 { 16 16 16 16 16 }
  }
}
```

The half note at the beginning of the measure and the faster notes in the second half of the measure now occupy equal amounts of horizontal space. We could place a measured timeline or graphic above or below this example.

The proportionalNotationDuration setting is a context setting that lives in \Score. Remember that context settings can appear in one of three locations within our input file – in a \with block, in a \context block, or directly in music entry preceded by the \set command. As with all context settings, users can pick which of the three different locations they would like to set proportionalNotationDuration in to.

The proportionalNotationDuration setting takes a single argument, which is the reference duration against that all music will be spaced. The LilyPond Scheme function make-moment takes two arguments – a numerator and denominator which together express some fraction of a whole note. The call (ly:make-moment 1/20) therefore produces a reference duration of a twentieth note. Values such as (ly:make-moment 1/16), (ly:make-moment 1/8), and (ly:make-moment 3/97) are all possible as well.

How do we select the right reference duration to pass to proportionalNotationDuration? Usually by a process of trial and error, beginning with a duration close to the fastest (or smallest) duration in the piece. Smaller reference durations space music loosely; larger reference durations space music tightly.

```
\score {
  \new RhythmicStaff {
    c2 16 16 16 \tuplet 5/4 { 16 16 16 16 16 }
  }
}
```
Note that too large a reference duration – such as the eighth note, above – spaces music too tightly and can cause note head collisions. Also that proportional notation in general takes up more horizontal space than classical spacing. Proportional spacing provides rhythmic clarity at the expense of horizontal space.

Next we examine how to optimally space overlapping tuplets.

We start by examining what happens to our original example, with classical spacing, when we add a second staff with a different type of tuplet.
The spacing is bad because the evenly spaced notes of the bottom staff do not stretch uniformly. Classical engravings include very few complex triplets and so classical engraving rules can generate this type of result. Setting proportionalNotationDuration fixes this.

But if we look very carefully we can see that notes of the second half of the 9-tuplet space ever so slightly more widely than the notes of the first half of the 9-tuplet. To ensure uniform stretching, we turn on uniform-stretching, which is a property of SpacingSpanner.
Our two-staff example now spaces exactly, our rhythmic relationships are visually clear, and we can include a measured timeline or graphic if we want.

Note that the LilyPond’s proportional notation package expects that all proportional scores set the SpacingSpanner’s uniform-stretching attribute to #t. Setting proportionalNotationDuration without also setting the SpacingSpanner’s uniform-stretching attribute to #t will, for example, cause skips to consume an incorrect amount of horizontal space.

The SpacingSpanner is an abstract grob that lives in the Score context. As with our settings of proportionalNotationDuration, overrides to the SpacingSpanner can occur in any of three different places in our input file – in the Score’s \with block, in a Score’s \context block, or in note entry directly.

There is by default only one SpacingSpanner per Score. This means that, by default, uniform-stretching is either turned on for the entire score or turned off for the entire score. We can, however, override this behavior and turn on different spacing features at different places in the score. We do this with the command \newSpacingSection. See Section 4.5.2 [New spacing section], page 638, for more info.

Next we examine the effects of the Separating_line_group_ engraver and see why proportional scores frequently remove this engraver. The following example shows that there is a small amount of “prefatory” space just before the first note in each system.
Chapter 4: Spacing issues

The amount of this prefatory space is the same whether after a time signature, a key signature or a clef. `Separating_line_group_engraver` is responsible for this space. Removing `Separating_line_group_engraver` reduces this space to zero.

\begin{verbatim}
\paper {
  indent = #0
}

\new Staff \with {
  \remove Separating_line_group_engraver
} {
  c'1
  \break
  c'1
}

\begin{verbatim}
\set Score.proportionalNotationDuration = #(ly:make-moment 1/16)
  c''8 8 8 \clef alto d'2 2
\end{verbatim}

\begin{verbatim}
\set Score.proportionalNotationDuration = #(ly:make-moment 1/16)
\override Score.SpacingSpanner.strict-note-spacing = ##t
  c''8 8 8 \clef alto d'2 2
\end{verbatim}

non-musical elements like time signatures, key signatures, clefs and accidentals are problematic in proportional notation. None of these elements has rhythmic duration. But all of these elements consume horizontal space. Different proportional scores approach these problems differently.

It may be possible to avoid spacing problems with key signatures simply by not having any. This is a valid option since most proportional scores are contemporary music. The same may be true of time signatures, especially for those scores that include a measured timeline or other graphic. But these scores are exceptional and most proportional scores include at least some time signatures. Clefs and accidentals are even more essential.

So what strategies exist for spacing non-musical elements in a proportional context? One good option is the `strict-note-spacing` property of `SpacingSpanner`. Compare the two scores below:
Both scores are proportional, but the spacing in the first score is too loose because of the clef change. The spacing of the second score remains strict, however, because strict-note-spacing is turned on. Turning on strict-note-spacing causes the width of time signatures, key signatures, clefs and accidentals to play no part in the spacing algorithm.

In addition to the settings given here, there are other settings that frequently appear in proportional scores. These include:

- \override SpacingSpanner.strict-grace-spacing = ##t
- \set tupletFullLength = ##t
- \override Beam.breakable = ##t
- \override Glissando.breakable = ##t
- \override TextSpanner.breakable = ##t
- \remove Forbid_line_break_engraver in the Voice context

These settings space grace notes strictly, extend tuplet brackets to mark both rhythmic start and stop points, and allow spanning elements to break across systems and pages. See the respective parts of the manual for these related settings.

4.6 Fitting music onto fewer pages

Sometimes you can end up with one or two staves on a second (or third, or fourth...) page. This is annoying, especially if you look at previous pages and it looks like there is plenty of room left on those.

When investigating layout issues, annotate-spacing is an invaluable tool. This command prints the values of various layout spacing variables; for more details see the following section, Section 4.6.1 [Displaying spacing], page 651.

4.6.1 Displaying spacing

To graphically display the dimensions of vertical layout variables that may be altered for page formatting, set annotate-spacing in the \paper block:

```latex
\book {
  \score { { c4 } }
  \paper { annotate-spacing = ##t }
}
```
All layout dimensions are displayed in staff spaces, regardless of the units specified in the `\paper` or `\layout` block. In the above example, `paper-height` has a value of 59.75 staff spaces, and the `staff-size` is 20 points (the default value). Note that:

1 point \(= (25.4/72.27) \text{ mm}\)

1 staff space \(= (\text{staff-size})/4 \text{ pts}\)
\(= (\text{staff-size})/4 \times (25.4/72.27) \text{ mm}\)

In this case, one staff space is approximately equal to 1.757mm. Thus the `paper-height` measurement of 59.75 staff spaces is equivalent to 105 millimeters, the height of a6 paper in landscape orientation. The pairs \((a, b)\) are intervals, where \(a\) is the lower edge and \(b\) the upper edge of the interval.

**See also**

Notation Reference: Section 4.2.2 [Setting the staff size], page 610.

Snippets: Section “Spacing” in Snippets.

### 4.6.2 Changing spacing

The output of `annotate-spacing` reveals vertical dimensions in great detail. For details about modifying margins and other layout variables, see Section 4.1 [Page layout], page 597.

Other than margins, there are a few other options to save space:

- Force systems to move as close together as possible (to fit as many systems as possible onto a page) while being spaced so that there is no blank space at the bottom of the page.

\[\text{paper \{ system-system-spacing = '#'((basic-distance . 0.1) (padding . 0)) ragged-last-bottom = ##f} \]

Music engraving by LilyPond 2.25.0—www.lilypond.org
• Force the number of systems. This can help in two ways. Just setting a value, even the same value as the number of systems being typeset by default, will sometimes cause more systems to be fitted onto each page, as an estimation step is then bypassed, giving a more accurate fit to each page. Also, forcing an actual reduction in the number of systems may save a further page. For example, if the default layout has 11 systems, the following assignment will force a layout with 10 systems.

\paper {
    system-count = #10
}

• Force the number of pages. For example, the following assignment will force a layout with 2 pages.

\paper {
    page-count = #2
}

• Avoid (or reduce) objects that increase the vertical size of a system. For example, volta brackets for alternative repeat endings require extra space. If these endings are spread over two systems, they take up more space than if they were on the same system. As another example, dynamics that ‘stick out’ of a system can be moved closer to the staff:

\relative e' {
    e4 c g\f c
    e4 c g-\tweak X-offset #-2.7 \f c
}

• Alter the horizontal spacing via SpacingSpanner. For more details, see Section 4.5.3 [Changing horizontal spacing globally], page 638. The following example illustrates the default spacing:

\score {
    \relative {
        g'4 e e2 |
        f4 d d2 |
        c4 d e f |
        g4 g g2 |
        g4 e e2 |
    }
}

The next example modifies common-shortest-duration from a value of 1/4 to 1/2. The quarter note is the most common and shortest duration in this example, so by making this duration longer, a ‘squeezing’ effect occurs:

\score {
The common-shortest-duration property cannot be modified dynamically, so it must always be placed in a \context block so that it applies to the whole score.

Snippets: Section “Spacing” in Snippets.
5 Changing defaults

The purpose of LilyPond’s design is to provide the finest quality output by default. Nevertheless, it may happen that you need to change this default layout. The layout is controlled through a large number of ‘knobs and switches’ collectively called ‘properties’. A tutorial introduction to accessing and modifying these properties can be found in the Learning Manual, see Section “Tweaking output” in Learning Manual. This should be read first. This chapter covers similar ground, but in a style more appropriate to a reference manual.

The definitive description of the controls available for tuning can be found in a separate document: Section “the Internals Reference” in Internals Reference. That manual lists all the variables, functions and options available in LilyPond. It is written as a HTML document, which is available on-line (https://lilypond.org/doc/stable/Documentation/internals/), and is also included with the LilyPond documentation package.

Internally, LilyPond uses Scheme (a LISP dialect) to provide infrastructure. Overriding layout decisions in effect accesses the program internals, which requires Scheme input. Scheme elements are introduced in a .ly file with the hash mark #.\footnote{Section “Scheme tutorial” in Extending, contains a short tutorial on entering numbers, lists, strings, and symbols in Scheme.}

5.1 Interpretation contexts

This section describes what contexts are, and how to modify them.

See also

Snippets: Section “Contexts and engravers” in Snippets.

Internals Reference: Section “Contexts” in Internals Reference, Section “Engravers and Performers” in Internals Reference.

5.1.1 Contexts explained

Contexts are arranged hierarchically:

Output definitions – blueprints for contexts

This section explains the relevance of output definitions when working with contexts. Examples for actual output definitions are given later (see [Changing all contexts of the same type], page 664).

While music written in a file may refer to context types and names, contexts are created only when the music is actually being interpreted. LilyPond interprets music under control of an ‘output definition’ and may do so for several different output definitions, resulting in different output. The output definition relevant for printing music is specified using \layout.

A much simpler output definition used for producing Midi output is specified using \midi. Several other output definitions are used by LilyPond internally, like when using the part combiner ([Automatic part combining], page 205) or creating music quotes ([Quoting other voices], page 237).

Output definitions define the relation between contexts as well as their respective default settings. While most changes will usually be made inside of a \layout block, Midi-related settings will only have an effect when made within a \midi block.

Some settings affect several outputs: for example, if autoBeaming is turned off in some context, beams count as melismata for the purpose of matching music to lyrics as described in
Automatic syllable durations], page 315. This matching is done both for printed output as well as for Midi. If changes made to autoBeaming within a context definition of a \layout block are not repeated in the corresponding \midi block, lyrics and music will get out of sync in Midi.

See also

Installed Files: 1y/engraver-init.ly 1y/performer-init.ly.

Score – the master of all contexts

This is the top level notation context. No other context can contain a Score context. By default the Score context handles the administration of time signatures and makes sure that items such as clefs, time signatures, and key signatures are aligned across staves.

A Score context is instantiated implicitly when a \score {...} block is processed.

Top-level contexts – staff containers

StaffGroup

Groups staves while adding a bracket on the left side, grouping the staves together. The bar lines of the contained staves are connected vertically. StaffGroup only consists of a collection of staves, with a bracket in front and spanning bar lines.

ChoirStaff

Identical to StaffGroup except that the bar lines of the contained staves are not connected vertically.

GrandStaff

A group of staves, with a brace on the left side, grouping the staves together. The bar lines of the contained staves are connected vertically.

PianoStaff

Just like GrandStaff, but with support for instrument names to the left of each system.

Intermediate-level contexts – staves

Staff

Handles clefs, bar lines, keys, accidentals. It can contain Voice contexts.

RhythmicStaff

Like Staff but for printing rhythms. Pitches are ignored when engraving; the notes are printed on one line. The MIDI rendition retains pitches unchanged.

TabStaff

Context for generating tablature. By default lays the music expression out as a guitar tablature, printed on six lines.

DrumStaff

Handles typesetting for percussion. Can contain DrumVoice.

VaticanaStaff

Same as Staff, except that it is designed for typesetting a piece in gregorian style.

MensuralStaff

Same as Staff, except that it is designed for typesetting a piece in mensural style.
**Bottom-level contexts – voices**

Voice-level contexts initialise certain properties and start appropriate engravers. A bottom-level context is one without defaultchild. While it is possible to let it accept/contain subcontexts, they can only be created and entered explicitly.

**Voice**

Corresponds to a voice on a staff. This context handles the conversion of dynamic signs, stems, beams, super- and subscripts, slurs, ties, and rests. You have to instantiate this explicitly if you require multiple voices on the same staff.

**VaticanaVoice**

Same as Voice, except that it is designed for typesetting a piece in gregorian style.

**MensuralVoice**

Same as Voice, with modifications for typesetting a piece in mensural style.

**Lyrics**

Corresponds to a voice with lyrics. Handles the printing of a single line of lyrics.

**DrumVoice**

The voice context used in a percussion staff.

**FiguredBass**

The context in which BassFigure objects are created from input entered in \figuremode mode.

**TabVoice**

The voice context used within a TabStaff context. Usually left to be created implicitly.

**CueVoice**

A voice context used to render notes of a reduced size, intended primarily for adding cue notes to a staff, see [Formatting cue notes], page 241. Usually left to be created implicitly.

**ChordNames**

Typesets chord names.

### 5.1.2 Creating and referencing contexts

LilyPond will create lower-level contexts automatically if a music expression is encountered before a suitable context exists, but this is usually successful only for simple scores or music fragments like the ones in the documentation. For more complex scores it is advisable to specify all contexts explicitly with either the \new or \context command. The syntax of these two commands is very similar:

```
[\new | \context] Context [ = name] [music-expression]
```

where either \new or \context may be specified. Context is the type of context which is to be created, name is an optional name to be given to the particular context being created and music-expression is a single music expression that is to be interpreted by the engravers and performers in this context.

The \new prefix without a name is commonly used to create scores with many staves:

```lilypond
<<
\new Staff \relative {%
 leave the Voice context to be created implicitly
 c'4 c
}
\new Staff \relative {
 d'4 d
```
and to place several voices into one staff:

\new Staff <<
  \new Voice \relative {\voiceOne}
    c''8 c c4 c c 
  \new Voice \relative {\voiceTwo}
    g'4 g g g 
>>

\new should always be used to specify unnamed contexts.

The difference between \new and \context is in the action taken:

• \new with or without a name will always create a fresh, distinct, context, even if one with
  the same name already exists:

\new Staff <<
  \new Voice = "A" \relative {\voiceOne}
    c''8 c c4 c c 
  \new Voice = "A" \relative {\voiceTwo}
    g'4 g g g 
>>

• \context with a name specified will create a distinct context only if a context of the same
  type with the same name in the same context hierarchy does not already exist. Otherwise
  it will be taken as a reference to that previously created context, and its music expression
  will be passed to that context for interpretation.

Named contexts may be useful in special cases such as lyrics or figured bass, as demonstrated
in [Working with lyrics and variables], page 324, and Section “Vocal ensembles templates”
in Learning Manual for the former and [Displaying figured bass], page 486, for the latter.
More generally, one application of named contexts is in separating the score layout from the musical content. Either of these two forms is valid:

\score {
  \context Voice = "one" {
    \relative {
      c''4 c c c
    }
  }
  \context Voice = "two" {
    \relative {
      g'8 g g4 g g
    }
  }
}

\score {
  \context Voice = "one" {
    \relative {
      c''4 c c c
    }
  }
  \context Voice = "two" {
    \relative {
      g'8 g g4 g g
    }
  }
}
Alternatively, variables may be employed to similar effect. See Section “Organizing pieces with variables” in Learning Manual.

- \context with no name will match the first of any previously created contexts of the same type in the same context heirarchy, even one that has been given a name, and its music expression will be passed to that context for interpretation. This form is rarely useful. However, \context with no name and no music expression is used to set the context in which a Scheme procedure specified with \applyContext is executed:

\new Staff \relative {
  c'1
  \context Timing
  \applyContext #(lambda (ctx)
    (newline)
    (display (ly:context-current-moment ctx)))
  c1
}

A context must be named if it is to be referenced later, for example when lyrics are associated with music:

\new Voice = "tenor" music
...
\new Lyrics \lyricsto "tenor" lyrics

For details of associating lyrics with music see [Automatic syllable durations], page 315.

The properties of all contexts of a particular type can be modified in a \layout block (with a different syntax), see [Changing all contexts of the same type], page 664. This construct also provides a means of keeping layout instructions separate from the musical content. If a single context is to be modified, a \with block must be used, see [Changing just one specific context], page 667.

See also

Notation Reference: [Changing just one specific context], page 667, [Automatic syllable durations], page 315.

5.1.3 Keeping contexts alive

Contexts are usually terminated at the first musical moment in which they have nothing to do. So Voice contexts die as soon as they contain no events, Staff contexts die as soon as all the Voice contexts within them contain no events, etc. This can cause difficulties if earlier contexts which have died have to be referenced, for example, when changing staves with \change commands, associating lyrics with a voice with \lyricsto commands, or when adding further musical events to an earlier context.

There is an exception to this general rule: inside of an {...} construct (sequential music), the construct’s notion of the “current context” will descend whenever an element of the sequence
ends in a subcontext of the previous current context. This avoids spurious creation of implicit contexts in a number of situations but means that the first context descended into will be kept alive until the end of the expression.

In contrast, the contexts of a \texttt{\langle\ldots\rangle} construct’s (simultaneous music) expression are not carried forth, so enclosing a context creating command in an extra pair of \texttt{\langle\ldots\rangle} will keep the context from persisting through all of the enclosing \texttt{\{\ldots\}} sequence.

Any context can be kept alive by ensuring it has something to do at every musical moment. Staff contexts are kept alive by ensuring one of their voices is kept alive. One way of doing this is to add spacer rests to a voice in parallel with the real music. These need to be added to every \texttt{Voice} context which needs to be kept alive. If several voices are to be used sporadically it is safest to keep them all alive rather than attempting to rely on the exceptions mentioned above.

In the following example, both voice A and voice B are kept alive in this way for the duration of the piece:

```latex
\begin{music}
\context Voice = "A" { \voiceOneStyle \musicA }
\context Voice = "B" { \voiceTwoStyle \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }
\context Voice = "A" { \musicA }
\context Voice = "B" { \musicB }

accompaniment = \relative { d'4 d d d }
words = \lyricmode { These words follow the melody }
\score {
  <<
    \new Staff = "music" {
      <<
        \new Voice = "melody" {
          \voiceOne
          s1*4  % Keep Voice "melody" alive for 4 bars
        }
        {
          \new Voice = "accompaniment" {
            \voiceTwo
            \accompaniment
          }
        }
        <<
          \context Voice = "melody" { \melody }
          \context Voice = "accompaniment" { \accompaniment }
        >>
        \context Voice = "accompaniment" { \accompaniment }
        <<
          \context Voice = "melody" { \melody }
          \context Voice = "accompaniment" { \accompaniment }
        >>
      }
    }
  >>
  \new Lyrics \with { alignAboveContext = "music" }
  \lyricsto "melody" { \words }
}  

These words follow the melody

An alternative way, which may be better in many circumstances, is to keep the melody line alive by simply including spacer notes to line it up correctly with the accompaniment:

melody = \relative {
  s1  % skip a bar
  a'4 a a a
  s1  % skip a bar
  a4 a a a
}
accompaniment = \relative {
  d'4 d d d
  d4 d d d
  d4 d d d
  d4 d d d
}
words = \lyricmode { These words follow the melody }

5.1.4 Modifying context plug-ins

Notation contexts (like Score and Staff) not only store properties, they also contain plug-ins called ‘engravers’ that create notation elements. For example, the Voice context contains a Note_heads_engraver and the Staff context contains a Key_engraver.

For a full description of each plug-in, see Internals Reference → Translation → Engravers. Every context described in Internals Reference → Translation → Context. lists the engravers used for that context.

It can be useful to shuffle around these plug-ins. This is done by starting a new context with \new or \context, and modifying it,

\new context \with {
  \consists ...
  \consists ...
  \remove ...
  \remove ...
  etc.
}

...music...

where each ... should be the name of an engraver. Here is a simple example which removes Time_signature_engraver and Clef_engraver from a Staff context,

\new Staff \relative {
  f'2 g
}
\new Staff \with {

\score {
  <<
    \new Staff = "music" {
      <<
        \new Voice = "melody" {
          \voiceOne
          \melody
        }
        \new Voice = "accompaniment" {
          \voiceTwo
          \accompaniment
        }
      }
    }
  }
  \new Lyrics \with { alignAboveContext = "music" }
  \lyricsto "melody" { \words }
}
In the second staff there are no time signature or clef symbols. This is a rather crude method of making objects disappear since it will affect the entire staff. This method also influences the spacing, which may or may not be desirable. More sophisticated methods of blanking objects are shown in Section “Visibility and color of objects” in Learning Manual.

**Known issues and warnings**

The order in which the engravers are specified is the order in which they are called to carry out their processing. Usually the order in which the engravers are specified does not matter, but in a few special cases the order is important, for example where one engraver writes a property and another reads it, or where one engraver creates a grob and another must process it.

The following orderings are important:

- the Bar_engraver must normally be first,
- the New_fingering_engraver must come before the Script_column_engraver,
- the Timing_translator must come before the Bar_number_engraver.

**See also**

Installed Files: ly/engraver-init.ly.

**5.1.5 Changing context default settings**

Context and grob properties can be changed with \set and \override commands, as described in Section 5.3 [Modifying properties], page 677. These commands create music events, making the changes take effect at the point in time the music is being processed.

In contrast, this section explains how to change the default values of context and grob properties at the time the context is created. There are two ways of doing this. One modifies the default values in all contexts of a particular type, the other modifies the default values in just one particular instance of a context.

**Changing all contexts of the same type**

The default context settings which are to be used for typesetting in Score, Staff, Voice and other contexts may be specified in a \context block within any \layout block.

Settings for Midi output as opposed to typesetting will have to be separately specified in \midi blocks (see [Output definitions – blueprints for contexts], page 655).

The \layout block should be placed within the \score block to which it is to apply, after the music.

\layout {
  \context {
  \remove Time_signature_engraver
  \remove Clef_engraver
  \relative {f'2 g2}
The following types of settings may be specified:

- An `\override` command, but with the context name omitted

\score {
\relative {
    a'4"Thicker stems" a a a
    a4 a a \ff a
}\layout {
    \context {
        \Staff
        \override Stem.thickness = #4.0
    }
}\context {
    [context settings for all Staff contexts]}
}\context {
    [context settings for all Voice contexts]}
}

![Thicker stems]

- Directly setting a context property

\score {
\relative {
    a'4"Smaller font" a a a
    a4 a a \ff a
}\layout {
    \context {
        \Staff
        fontSize = #-4
    }
}\context {
    [context settings for all Staff contexts]}
}

![Smaller font]

- A predefined command such as `\dynamicUp` or a music expression like `\accidentalStyle`

\score {
\relative {
    a'4"Dynamics above" a a a
    a4 a a \ff a
}\layout {
    \context {
        \Staff
        accidentalStyle = dodecaphonic
    }
}\context {
    [context settings for all Staff contexts]}
}
A user-defined variable containing a `\with` block; for details of the `\with` block see [Changing just one specific context], page 667.

\begin{verbatim}
StaffDefaults = \with {
  fontSize = #\text{-}4
}
\end{verbatim}

Property-setting commands can be placed in a `\layout` block without being enclosed in a `\context` block. Such settings are equivalent to including the same property-setting commands at the start of every context of the type specified. If no context is specified every bottom-level context is affected (see [Bottom-level contexts – voices], page 657). The syntax of a property-setting command in a `\layout` block is the same as the same command written in the music stream.

\begin{verbatim}
\score {
  \new Staff {
    \relative {
      a'4"Smaller font" a a a
      a4 a a a
    }
  }
  \layout {
    \context {
      \Staff
      \StaffDefaults
    }
  }
}
\end{verbatim}
Changing just one specific context

The context properties of just one specific context instance can be changed in a `\with` block. All other context instances of the same type retain the default settings built into LilyPond and modified by any `\layout` block within scope. The `\with` block must be placed immediately after the `\new context-type` command:

```lilypond
\new Staff \with {
    [context settings for this context instance only]
} {
    ...
}
```

Alternatively, if the music is being entered using the short form of the input mode-specifying commands, e.g. `\chords` rather than `\chordmode`, the `\with` command must be placed immediately after the mode-specifying command:

```lilypond
\chords \with {
    [context settings for this (implicit) context instance only]
} {
    ...
}
```

as it is the implicit context created by these short forms which should be modified. The same consideration applies to the other input mode-specifying short forms (`\drums`, `\figures`), see Section 3.1 [Input modes], page 531.

Since context modifications specified in `\with` blocks are inside music, they will affect all outputs (typesetting and Midi) as opposed to changes within an output definition.

The following types of settings may be specified:

- An `\override` command, but with the context name omitted

```lilypond
\score {
    \new Staff {
        \new Voice \with { \override Stem.thickness = #4.0 }
        {\relative { a'4\"Thick stems" a a a 
                  a4 a a a 
                  } }
    }
}
```
• Directly setting a context property
\score {
  \new Staff {
    \relative {
      a'4 "Default font" a a a
      a4 a a a
    }
  }
  \new Staff \with { fontSize = \#-4 }
  {
    \relative {
      a'4 "Smaller font" a a a
      a4 a a a
    }
  }
}

\score {
  \new Staff {
    \new Voice {
      \relative {
        a'4 "Dynamics below" a a a
        a4 a a\ff a
      }
    }
  }
  \new Staff \with { \accidentalStyle dodecaphonic }
  {
    \new Voice \with { \dynamicUp }
    {
      \relative {
        a'4 "Dynamics above" a a a
        a4 a a\ff a
      }
    }
  }
}

Thick stems

\score {
  \new Staff {
    \relative {
      a'4 "Default font" a a a
      a4 a a a
    }
  }
  \new Staff \with { fontSize = \#-4 }
  {
    \relative {
      a'4 "Smaller font" a a a
      a4 a a a
    }
  }
}

Default font

Smaller font

• A predefined command such as \dynamicUp
\score {
  \new Staff {
    \new Voice {
      \relative {
        a'4 "Dynamics below" a a a
        a4 a a\ff a
      }
    }
  }
  \new Staff \with { \accidentalStyle dodecaphonic }
  {
    \new Voice \with { \dynamicUp }
    {
      \relative {
        a'4 "Dynamics above" a a a
        a4 a a\ff a
      }
    }
  }
}

\score {
Order of precedence

The value of a property which applies at a particular time is determined as follows:
- if an \override or \set command in the input stream is in effect that value is used,
- otherwise the default value taken from a \with statement on the context initiation statement is used,
- otherwise the default value taken from the most recent appropriate \context block in the \layout or \midi blocks is used,
- otherwise the LilyPond built-in default is used.

5.1.6 Defining new contexts

Context definition overview

Specific contexts, like Staff and Voice, are made from simple building blocks. It is possible to create new types of contexts with different combinations of engraver plug-ins.

The next example shows how to build a different type of Voice context from scratch. It will be similar to Voice, but only prints centered slash note heads. It can be used to indicate improvisation in jazz pieces,

These settings are defined within a \context block inside a \layout block,

\layout {  
  \context {  
    ...  
  }  
}

In the following discussion, the example input shown should go in place of the ... in the previous fragment.
First it is necessary to define a name for the new context:
\name ImproVoice

Since it is similar to the \Voice context, we want commands that work in (existing) \Voice contexts to continue working. This is achieved by giving the new context an alias of \Voice,
\alias Voice

The context will print notes and instructive texts, so we need to add the engravers which provide this functionality, plus the engraver which groups notes, stems and rests which occur at the same musical moment into columns,
\consists Note_heads_engraver
\consists Text_engraver
\consists Rhythmic_column_engraver

The note heads should all be placed on the center line,
\consists Pitch_squash_engraver
\squashedPosition = #0

The \Pitch_squash_engraver modifies note heads (created by the \Note_heads_engraver) and sets their vertical position to the value of \squashedPosition, in this case 0, the center line.

The notes look like a slash, and have no stem,
\override NoteHead.style = #'slash
\hide Stem

All these plug-ins have to communicate under the control of the context. The mechanisms with which contexts communicate are established by declaring the context \type. Within a \layout block, most contexts will be of type \Engraver_group. Some special contexts use other context types. Copying and modifying an existing context definition will also fill in the type. Since this example creates a definition from scratch, it needs to be specified explicitly.
\type Engraver_group

Put together, we get
\context {
  \name ImproVoice
  \type Engraver_group
  \consists Note_heads_engraver
  \consists Text_engraver
  \consists Rhythmic_column_engraver
  \consists Pitch_squash_engraver
  \squashedPosition = #0
  \override NoteHead.style = #'slash
  \hide Stem
  \alias Voice
}

Contexts form hierarchies. We want to place the \ImproVoice context within the \Staff context, just like normal \Voice contexts. Therefore, we modify the \Staff definition with the \accepts command,
\context {
  \Staff
  \accepts ImproVoice
}

Often when reusing an existing context definition, the resulting context can be used anywhere where the original context would have been useful.
\layout {
... \inherit-acceptability to from
}

will arrange to have contexts of type to accepted by all contexts also accepting from. For example, using

\layout {
... 
\inherit-acceptability ImproVoice Voice
}

will add an \accepts for ImproVoice to both Staff and RhythmicStaff definitions.

The opposite of \accepts is \denies, which is sometimes needed when reusing existing context definitions.

Arranging the required pieces into a \layout block leaves us with

\layout {
\context {
  \name ImproVoice
...
}
\inherit-acceptability ImproVoice Voice
}

Then the output at the start of this subsection can be entered as

\relative {
  a'4 d8 bes8 
  \new ImproVoice {
    c\("\text{`ad lib'}\) c 
    c\("\text{`undress'}\)
    c c\("\text{`while playing :)}\"
  }
}

a1
}

See also
Internals Reference: Section “Contexts” in Internals Reference, Section “Engravers and Performers” in Internals Reference.

New contexts in MIDI
In MIDI output, the syntax for defining new context types is the same, except that the \context block should be placed inside a \midi block, and the \type should normally be Performer_group rather than Engraver_group. The term “engraver” refers to a context plug-in that creates visual output. A “performer”, on the other hand, is relevant in MIDI output only. When plug-ins have “translator” in their name rather than “engraver” or “performer”, they are relevant for both graphical and audio output. Thus, when adapting a context definition for the \midi block, you need to

• copy it in a \midi block,
• change Engraver_group to Performer_group,
• remove \consists for engravers (they are not relevant), and possibly add \consists for performers.

Please note that, in order to maintain consistent interpretation between graphical and MIDI output, it is recommended to copy any custom context definition in a \midi block. It should
at the minimum include those commands that specify the context hierarchy, such as \accepts,  
\defaultchild and \inherit-acceptability. Copying aliases is advised as well.

Thus, to complete the example above, the following can be added:

\midi {  
  \context {  
    \name ImproVoice  
    \type Performer_group  
    \alias Voice  
    \consists Note_performer  
    \consists Beam_performer  
    \consists Dynamic_performer  
    \consists Tie_performer  
    \consists Slur_performer  
  }  
  \context {  
    \Staff  
    \accepts ImproVoice  
  }  
}

This makes the ImproVoice context also work in MIDI output.

Replacing the Score context

In order to write a context MyScore that acts as the topmost context, as the Score context  
usually does, use \inherit-acceptability MyScore Score. The following example defines a  
ProportionalScore context where proportional notation is enabled (see Section 4.5.6 [Proportional notation], page 645).

\layout {  
  \context {  
    \Score  
    \name ProportionalScore  
    \alias Score  
    \proportionallNotationDuration = #{(ly:make-moment 1/4)}  
  }  
  \inherit-acceptability ProportionalScore Score  
}

\new ProportionalScore { c'1 2 4 8 16 32 64 64 }

Since the topmost context needs to contain a number of fundamental engravers, inheriting  
settings with \Score is easiest in most cases. If you nevertheless define a score-level context  
from scratch without inheriting the Score definition, the argument to \type should be Score_  
engraver (or Score_performer in \midi) rather than Engraver_group. Furthermore, giving  
the topmost context the Score alias is strongly recommended given that a number of engravers  
need to access the topmost context using its alias.

5.1.7 Context layout order

Contexts are normally positioned in a system from top to bottom in the order in which they are  
encountered in the input file. When contexts are nested, the outer context will include inner
nested contexts as specified in the input file, provided the inner contexts are included in the outer context’s “accepts” list. Nested contexts which are not included in the outer context’s “accepts” list will be repositioned below the outer context rather than nested within it.

The “accepts” list of a context can be changed with the \accepts or \denies commands. \accepts adds a context to the “accepts” list and \denies removes a context from the list.

For example, a TabStaff by default \accepts TabVoice contexts and \denies Voice contexts. If a Voice context is written within the TabStaff, it would be set on a separate staff.

\score {
\new TabStaff <<
\new TabVoice { c'1 }
\new Voice { d'1 }
>>
}

\layout {
\context {
\TabStaff
\accepts Voice
}
}

\denies is mainly used when a new context is being based on another, but the required nesting differs. For example, the VaticanaStaff context is based on the Staff context, but with the VaticanaVoice context substituted for the Voice context in the “accepts” list.

Note that a context will be silently created implicitly if a command is encountered when there is no suitable context available to contain it.

Within a context definition, the type of subcontext to be implicitly created is specified using \defaultchild. A number of music events require a ‘Bottom’ context: when such an event is encountered, subcontexts are created recursively until reaching a context with no ‘defaultchild’ setting.

Implicit context creation can at times give rise to unexpected new staves or scores. Using \new to create contexts explicitly avoids those problems.
Sometimes a context is required to exist for just a brief period, a good example being the staff context for an ossia. This is usually achieved by introducing the context definition at the appropriate place in parallel with corresponding section of the main music. By default, the temporary context will be placed below all the existing contexts. To reposition it above the context called “main”, it should be defined like this:

\new Staff \with { alignAboveContext = "main" }

A similar situation arises when positioning a temporary lyrics context within a multi-staff layout such as a ChoirStaff, for example, when adding a second verse to a repeated section. By default the temporary lyrics context will be placed beneath the lower staves. By defining the temporary lyrics context with alignBelowContext it can be positioned correctly beneath the (named) lyrics context containing the first verse.

Examples showing this repositioning of temporary contexts can be found elsewhere – see Section “Nesting music expressions” in Learning Manual, Section 1.6.2 [Modifying single staves], page 222, and Section 2.1.2 [Techniques specific to lyrics], page 324.

5.2 Explaining the Internals Reference

See also
Notation Reference: Section A.23 [Naming conventions], page 847.

5.2.1 Navigating the program reference

Suppose we want to move the fingering indication in the fragment below:

\begin{verbatim}
c' -2
\end{verbatim}

If you visit the documentation on fingering instructions (in [Fingering instructions], page 252), you will notice:

See also
Internals Reference: Section “Fingering” in Internals Reference.

The programmer’s reference is available as an HTML document. It is highly recommended that you read it in HTML form, either online or by downloading the HTML documentation. This section will be much more difficult to understand if you are using the PDF manual.

Follow the link to Section “Fingering” in Internals Reference. At the top of the page, you will see

Fingering objects are created by: Section “Fingering_engraver” in Internals Reference and Section “New_fingering_engraver” in Internals Reference.

By following related links inside the program reference, we can follow the flow of information within the program:

- Section “Fingering” in Internals Reference: Section “Fingering” in Internals Reference objects are created by: Section “Fingering_engraver” in Internals Reference
• Section “Fingering-engraver” in Internals Reference: Music types accepted: Section “fingering-event” in Internals Reference

• Section “fingering-event” in Internals Reference: Music event type fingering-event is in Music expressions named Section “FingeringEvent” in Internals Reference

This path goes against the flow of information in the program: it starts from the output, and ends at the input event. You could also start at an input event, and read with the flow of information, eventually ending up at the output object(s).

The program reference can also be browsed like a normal document. It contains chapters on Music definitions on Section “Translation” in Internals Reference, and the Section “Backend” in Internals Reference. Every chapter lists all the definitions used and all properties that may be tuned.

5.2.2 Layout interfaces

The HTML page that we found in the previous section describes the layout object called Section “Fingering” in Internals Reference. Such an object is a symbol within the score. It has properties that store numbers (like thicknesses and directions), but also pointers to related objects. A layout object is also called a Grob, which is short for Graphical Object. For more details about Grobs, see Section “grob-interface” in Internals Reference.

The page for Fingering lists the definitions for the Fingering object. For example, the page says

```
padding (dimension, in staff space):
  0.5
```

which means that the number will be kept at a distance of at least 0.5 of the note head.

Each layout object may have several functions as a notational or typographical element. For example, the Fingering object has the following aspects

• Its size is independent of the horizontal spacing, unlike slurs or beams.
• It is a piece of text. Granted, it is usually a very short text.
• That piece of text is typeset with a font, unlike slurs or beams.
• Horizontally, the center of the symbol should be aligned to the center of the note head.
• Vertically, the symbol is placed next to the note and the staff.
• The vertical position is also coordinated with other superscript and subscript symbols.

Each of these aspects is captured in so-called interfaces, which are listed on the Section “Fingering” in Internals Reference page at the bottom

This object supports the following interfaces: Section “item-interface” in Internals Reference, Section “self-alignment-interface” in Internals Reference, Section “side-position-interface” in Internals Reference, Section “text-interface” in Internals Reference, Section “text-script-interface” in Internals Reference, Section “font-interface” in Internals Reference, Section “finger-interface” in Internals Reference, and Section “grob-interface” in Internals Reference.

Clicking any of the links will take you to the page of the respective object interface. Each interface has a number of properties. Some of them are not user-serviceable (‘Internal properties’), but others can be modified.

We have been talking of the Fingering object, but actually it does not amount to much. The initialization file (see Section “Other sources of information” in Learning Manual) scm/define-grobs.scm shows the soul of the ‘object’,

```
(Fingering
  . ((padding . 0.5)
```
(avoid-slur . around)
(slur-padding . 0.2)
(staff-padding . 0.5)
(self-alignment-X . 0)
(self-alignment-Y . 0)
(script-priority . 100)
(stencil . ,ly:text-interface::print)
(direction . ,ly:script-interface::calc-direction)
(font-encoding . fetaText)
(font-size . -5) ; don’t overlap when next to heads.
(meta . ((class . Item)
  (interfaces . (finger-interface
    font-interface
    text-script-interface
    text-interface
    side-position-interface
    self-alignment-interface
    item-interface)))))

As you can see, the Fingering object is nothing more than a bunch of variable settings, and the webpage in the Internals Reference is directly generated from this definition.

5.2.3 Determining the grob property

Recall that we wanted to change the position of the 2 in $c''-2$

\[ \text{\includegraphics{fingering}} \]

Since the 2 is vertically positioned next to its note, we have to meddle with the interface associated with this positioning. This is done using side-position-interface. The page for this interface says

side-position-interface

Position a victim object (this one) next to other objects (the support). The property direction signifies where to put the victim object relative to the support (left or right, up or down?)

Below this description, the variable padding is described as

padding  (dimension, in staff space)

Add this much extra space between objects that are next to each other.

By increasing the value of padding, we can move the fingering away from the note head. The following command will insert “three staff spaces” worth of distance between the note and a fingering mark:

\once \override Voice.Fingering.padding = #3

Inserting the padding before the fingering object is created results in the following:

\once \override Voice.Fingering.padding = #3

\[ \text{\includegraphics{fingering}} \]
In this case, the context for this tweak is \texttt{Voice}. See Section “Fingering\_engraver” in \textit{Internals Reference} plug-in, which says:

Fingering\_engraver is part of contexts: \ldots Section “Voice” in \textit{Internals Reference}

5.3 Modifying properties

5.3.1 Overview of modifying properties

Each context is responsible for creating certain types of graphical objects. The settings used for printing these objects are also stored by context. By changing these settings, the appearance of objects can be altered.

There are two different kinds of properties stored in contexts: context properties and grob properties. Context properties are properties that apply to the context as a whole and control how the context itself is displayed. In contrast, grob properties apply to specific grob types that will be displayed in the context.

The \texttt{\set} and \texttt{\unset} commands are used to change values for context properties. The \texttt{\override} and \texttt{\revert} commands are used to change values for grob properties.

See also

5.3.2 The \texttt{\set} command

Each context has a set of \texttt{properties}, variables contained in that context. Context properties are changed with the \texttt{\set} command, which has the following syntax:

\begin{verbatim}
\set context.property = #\texttt{value}
\end{verbatim}

\texttt{value} is a Scheme object, which is why it must be preceded by the \# character.

Contexts properties are usually named in \texttt{studlyCaps}. They mostly control the translation from music to notation, e.g., \texttt{localAlterations} (for determining whether to print accidentals), or \texttt{measurePosition} (for determining when to print a bar line). Context properties can change value over time while interpreting a piece of music; \texttt{measurePosition} is an obvious example of this. Context properties are modified with \texttt{\set}.

For example, multi-measure rests will be combined into a single bar (as explained in \texttt{[Compressing empty measures]}, page 246) if the context property \texttt{skipBars} is set to \texttt{#t}:

\begin{verbatim}
R1\*2
\set Score.skipBars = ##t
R1\*2
\end{verbatim}

\begin{center}
\includegraphics[width=2cm]{rests.png}
\end{center}

If the \texttt{context} argument is left out, then the property will be set in the current bottom context (typically \texttt{ChordNames}, \texttt{Voice}, \texttt{TabVoice}, or \texttt{Lyrics}).

\begin{verbatim}
\set Score.autoBeaming = ##f
\relative { e''8 e e e
\set autoBeaming = ##t e8 e e e}
\end{verbatim}
The change is applied ‘on-the-fly’, during the music, so that the setting only affects the second group of eighth notes.

Note that the bottommost context does not always contain the property that you wish to change – for example, attempting to set the skipBars property of the default bottom context, in this case Voice, will have no effect, because skipBars is a property of the Score context.

\set skipBars = ##t
\relative {
  \once \set skipBars = ##t
  c''8 c c c c8 c c c
} \relative {
  c''8 c c c c8 c c c
}

Contexts are hierarchical, so if an enclosing context was specified, for example Staff, then the change would also apply to all Voices in the current staff.

The \unset command:

\unset context.property

is used to remove the definition of property from context. This command removes the definition only if it is set in context. Properties that have been set in enclosing contexts will not be altered by an unset in an enclosed context:

\set Score.autoBeaming = ##t
\relative {
  \unset autoBeaming
  e''8 e e e
  \unset Score.autoBeaming
  e8 e e e
} \relative {
  c''8 c c c c8 c c c
}

Like \set, the context argument does not have to be specified for a bottom context, so the two statements

\set Voice.autoBeaming = ##t
\set autoBeaming = ##t

are equivalent if the current bottom context is Voice.

Preceding a \set or \unset command by \once makes the setting apply to only a single time step:

c''4
A full description of all available context properties is in the internals reference, see Translation $\mapsto$ Tunable context properties.

See also
Internals Reference: Section “Tunable context properties” in Internals Reference.

5.3.3 The \override command

There is a special type of context property: the grob description. Grob descriptions are named in StudlyCaps (starting with capital letters). They contain the ‘default settings’ for a particular kind of grob as an association list. See scm/define-grobs.scm to see the settings for each grob description. Grob descriptions are modified with \override.

The syntax for the \override command is

\override [context.]GrobName.property = #value

For example, we can increase the thickness of a note stem by overriding the thickness property of the Stem object:

c''4 c''
\override Voice.Stem.thickness = #3.0
\override Voice.Stem.thickness = #0.5
c''4 c''

If no context is specified in an \override, the bottom context is used:

\override Staff.Stem.thickness = #3.0
<<
\relative {
   e''4 e
   \override Stem.thickness = #0.5
e4 e
} \\
\relative {
   c''4 c c c
}
>>

Some tweakable options are called ‘subproperties’ and reside inside properties. To tweak those, use commands in the form

\override Stem.details.beamed-lengths = #'(4 4 3)
or to modify the ends of spanners, use a form like these
\override TextSpanner.bound-details.left.text = "left text"
\override TextSpanner.bound-details.right.text = "right text"

The effects of \override can be undone by \revert.

The syntax for the \revert command is
\revert [context.]GrobName.property

For example,
\relative {
  c''4
  \override Voice.Stem.thickness = #3.0
  c4 c
  \revert Voice.Stem.thickness
  c4
}

\once can be used with \override or \revert to affect only the current time step:
\relative c {
  \override Stem.thickness = #3.0
  e''4 e e e
e''4 e e e
e''4 e e e
} \\
\relative {
  c''4 c c
  \once \override Staff.Stem.thickness = #3.0
  c4 c c
  \revert Staff.Stem.thickness
  c4
}

\once can be used with \override or \revert to affect only the current time step:
5.3.4 The \tweak command

Changing grob properties with \override causes the changes to apply to all of the given grobs in the context at the moment the change applies. Sometimes, however, it is desirable to have changes apply to just one grob, rather than to all grobs in the affected context. This is accomplished with the \tweak command, which has the following syntax:

\tweak [layout-object.]grob-property value

Specifying layout-object is optional. The \tweak command applies to the music object that immediately follows value in the music stream.

For an introduction to the syntax and uses of the tweak command see Section “Tweaking methods” in Learning Manual.

When several similar items are placed at the same musical moment, the \override command cannot be used to modify just one of them – this is where the \tweak command must be used. Items which may appear more than once at the same musical moment include the following:

- note heads of notes inside a chord
- articulation signs on a single note
- ties between notes in a chord
- tuplet brackets starting at the same time

In this example, the color of one note head and the type of another note head are modified within a single chord:

\relative { c'\tweak color #red
d'\g'\tweak duration-log #1
a' > 4

\tweak can be used to modify slurs:

\relative { c' \tweak thickness #5 ( d e f ) }

For the \tweak command to work, it must remain immediately adjacent to the object to which it is to apply after the input file has been converted to a music stream. Tweaking a whole chord does not do anything since its music event only acts as a container, and all layout objects are created from events inside of the EventChord:

\tweak color #red c'4
The simple \tweak command cannot be used to modify any object that is not directly created from the input. In particular it will not affect stems, automatic beams or accidentals, since these are generated later by \notehead layout objects rather than by music elements in the input stream.

Such indirectly created layout objects can be tweaked using the form of the \tweak command in which the grob name is specified explicitly:

\tweak Stem.color #(universal-color 'orange)
\tweak Beam.color #(universal-color 'skyblue) c'8 e''
<\tweak Accidental.font-size #-3 ges''>4

\tweak cannot be used to modify clefs or time signatures, since these become separated from any preceding \tweak command in the input stream by the automatic insertion of extra elements required to specify the context.

Several \tweak commands may be placed before a notational element – all affect it:

c''
    -\tweak style #'dashed-line
    -\tweak dash-fraction #0.2
    -\tweak thickness #3
    -\tweak color #red
    \glissando
f''

The music stream which is generated from a section of an input file, including any automatically inserted elements, may be examined, see Section “Displaying music expressions” in Extending. This may be helpful in determining what may be modified by a \tweak command, or in determining how to adjust the input to make a \tweak apply.

See also

Extending LilyPond: Section “Displaying music expressions” in Extending.

Known issues and warnings
The \tweak command cannot be used to modify the control points of just one of several ties in a chord, other than the first one encountered in the input file.
5.3.5 \set vs. \override

The \set and \override commands manipulate properties associated with contexts. In both cases, the properties follow a hierarchy of contexts; properties that are not set themselves in a context will still show the values of their respective parent’s context.

The lifetime and value of a context property is dynamic and only available when music is being interpreted (i.e., ‘iterated’). At the time of the context’s creation, properties are initialized from its corresponding definitions (along with any other modifications) of that context. Any subsequent changes are achieved with any ‘property-setting’ commands that are within the music itself.

Graphical Object (or “grob”) definitions are a special category of context properties as their structure and use is different from that of normal context properties. Unlike normal context properties, grob definitions are subdivided into grob properties.

Also, in contrast to normal context properties, grob definitions have their own internal ‘bookkeeping’ used to keep track of their own individual grob properties and any subproperties. This means that it is possible to define those parts within different contexts and yet still have the overall grob definition at the time of grob creation from all the pieces provided amongst the current context and its parent(s).

A grob is usually created by an engraver at the time of interpreting a music expression and receives its initial properties from the current grob definition of the engraver’s context. The engraver (or other ‘backend’ parts of LilyPond) can then change (or add to) the grob’s initial properties. However, this does not affect the context’s own grob definition.

What LilyPond calls grob properties in the context of ‘user-level’ tweaks are really the properties of a context’s own grob definition.

Grob definitions are accessed with a different set of commands and are manipulated using \override and \revert and have a name starting with a capital letter (e.g., ‘NoteHead’); whereas normal context properties are manipulated using \set and \unset and are named starting with a lowercase letter.

The commands \tweak and \overrideProperty change grob properties by bypassing all context properties completely and, instead, catch grobs as they are being created, setting properties on them for a music event (\tweak) or, in the case of \overrideProperty for a specific override.

5.3.6 The \offset command

While it is possible to set grob properties to new values with the \override, \tweak, and \overrideProperty commands, it is often more convenient to modify such properties relative to a default value. The \offset command is available for this purpose.

The syntax for \offset is

\[-\] offset property offsets item

The command works by adding the contents of offsets to the default setting of the property property of the grob indicated by item.

Depending on the formulation of the command, \offset may act as either a \tweak or \override. The variations in usage are discussed after consideration is given to grob properties that may be used with \offset.

Properties which may be offset

Many, but not all, grob properties may be offset. If property cannot be offset, the object will remain unchanged and a warning will be issued. In such cases, \override or \tweak should be used to modify the object instead.

One can work by trial and error and let the warnings be the guide to what may or may not be offset. A more systematic approach is possible, however.
The following criteria determine whether a property can be modified with \offset:

- The property has a ‘default setting’ in the grob’s description. Such properties are listed for each grob in Section “All layout objects” in Internals Reference. (They are also found in scm/define-grobs.scm.)
- The property takes a numerical value. Numerical values include number, list of numbers, number-pair, and number-pair-list. The pages at Section “All layout objects” in Internals Reference list the type of data characteristic to each property. It is immaterial whether the default setting is a function.
- The property cannot be a ‘subproperty’ – a property residing within another property.
- Properties set to infinite values cannot be offset. There is no sensible way to offset positive and negative infinity.

The following examples consider several grob properties against the criteria outlined above.

- Properties that may be offset
  
  Hairpin.height
  This property is not a subproperty, and it is listed at Section “Hairpin” in Internals Reference. For a value, it takes ‘dimension, in staff space’ set to 0.6666 – clearly a non-infinite number.

  Arpeggio.positions
  The page Section “Arpeggio” in Internals Reference lists a positions property which accepts a ‘pair of numbers’. It defaults to \ly:arpeggio::positions – a callback which will be evaluated during the typesetting phase to yield a pair of numbers for any given Arpeggio object.

- Properties that may not be offset
  
  Hairpin.color
  There is no listing for color at Section “Hairpin” in Internals Reference.

  Hairpin.circled-tip
  The listing for Hairpin.circled-tip at Section “Hairpin” in Internals Reference shows that it takes a boolean value. Booleans are non-numerical.

  Stem.details.lengths
  Though listed at Section “Stem” in Internals Reference and defaulting to a list of numbers, this is a ‘subproperty’. There is currently no support for ‘nested properties’.

\offset as an override

If item is a grob name like Arpeggio or Staff.OttavaBracket, the result is an \override of the specified grob type.

\offset property offsets [context.]GrobName

Note that the leading hyphen is never used with the ‘override’ form, just as it is never used with the \override command itself.

The following example uses the ‘override’ form to lengthen the default arpeggios shown in the first measure to cover the extent of the chords more fully. The arpeggios are stretched by a half staff space to top and bottom. Also shown is the same operation done on the first chord with an ordinary override of the positions property. This method is not at all expressive of the task of ‘stretching by a half staff space’, as the endpoints must be specified with absolute rather than relative coordinates. Furthermore, individual overrides would be needed for the other chords, as they vary in size and position.

\begin{verbatim}
\offsetMusic = {
  arpeggioMusic = {
    \override Arpeggio.positions = \ly:arpeggio::\compound \\line {2} {2} {\ly:arpeggio::\line {2} {2}}
  }
}
In its ‘override’ usage, \offset may be prefaced with \once or \temporary and reverted using \revert with property (see Section “Intermediate substitution functions” in Extending). This follows from the fact that \offset actually creates an \override of property.

\offset heights 1 Hairpin
\offset height 1 Hairpin
\offset height 2 Hairpin
\offset height 0.2
\temporary \offset height 2 Hairpin
\offset height 2 Hairpin
\offset height 0.2
\offset height 1 Hairpin
\offset height 1 Hairpin
\offset height 1 Hairpin
\offset height 2 Hairpin
\offset height 2 Hairpin
\offset height 2 Hairpin
\offset height 2 Hairpin
\offset height 2 Hairpin
Also like \override, the ‘override’ form of \offset may be used with \undo and \single.

\longStem = \offset length 6 Stem

\{ 
  \longStem c'4 c''' c' c''
  \bar "||"
  \undo \longStem c'4 c''' c' c''
  \bar "||"
  \single \longStem c'4 c''' c' c''
  \bar "||"
\}

\offset as a tweak

If item is a music expression such as ( or \arpeggio, the result is the same music expression with a tweak applied.

[-]\offset [GrobName.]property offsets music-expression

The syntax of \offset in its ‘tweak’ form is analogous to the \tweak command itself, both in ordering and in the presence or absence of the leading hyphen.

The following example uses the ‘tweak’ form to adjust the vertical position of the BreathingSign object. Compare this with the ordinary \tweak command also demonstrated. The syntax is equivalent; however, the output of \tweak is less intuitive, since BreathingSign.Y-offset is calculated from the middle staff line. It is not necessary to know how Y-offset is calculated when using \offset.

\{ 
  c''4 
  \breathe 
  c''4 
  \offset Y-offset 2 \breathe
  c''2 
  \tweak Y-offset 3 \breathe 
\}

In the previous example, the tweaked objects were created directly from the user input: the \breathe command was an explicit instruction to return a BreathingSign object. Since the focus of the command was unambiguous, there was no need to specify the object’s name. When an object is indirectly created, however, it is necessary to include the grob’s name. This is the same as for the \tweak command.
In the following example, the \texttt{Beam} object is lowered two staff spaces by applying \texttt{\textbackslash offset} to the \texttt{positions} property.

The first application of \texttt{\textbackslash offset} requires that the grob’s name be included, because nothing in the input explicitly creates the beam. In the second application, the beam is created manually with the music expression [; therefore, the grob’s name is not needed. (Also illustrated is a shorthand: a single number will be applied to both members of a number-pair.)

\begin{music}
\{\begin{music}
c''8 \quad g'' \quad e'' \quad d''
\texttt{\textbackslash offset \ Beam \ positions \#'(-2 . -2)} \\
c''8 \quad g'' \quad e'' \quad d''
\texttt{\textbackslash offset \ positions \#-2 \ [ \ g'' \ e'' \ d'']}
\end{music}\}
\end{music}

\texttt{\textbackslash offset with broken spanners}

Independently modifying segments of a spanner extending over a line break or breaks is also possible. In this case, \texttt{\textbackslash offset} takes a list of values of the property’s required data type.

The \texttt{\textbackslash offset} command used in this manner is similar to the \texttt{\textbackslash alterBroken} command. (See [Modifying broken spanners], page 693.) In contrast with \texttt{\textbackslash alterBroken}, however, the values given to \texttt{\textbackslash offset} are relative, not absolute.

The following example displaces the ‘broken’ \texttt{OttavaBracket} object through its \texttt{staff-padding} property. Since the property takes a number, \texttt{\textbackslash offset} is provided with a list of numbers to account for the two segments created by the line break. The bracket piece on the first line is effectively untouched since 0 is added to its default value of \texttt{staff-padding}. The segment on the second line is raised three staff spaces from its default height. The default height happens to be 2, though it is not necessary to know this to achieve the desired positioning.

\begin{music}
\{\begin{music}
\texttt{\textbackslash offset \ staff-padding \#'(0 3) \ Staff.\ OttavaBracket} \\
\texttt{\ottava \#1} \\
\texttt{c'''2 \ c'''} \\
\texttt{\break} \\
\texttt{c'''2 \ c'''}
\end{music}\}
\end{music}

The following example mimics the effect of the \texttt{\textbackslash shape} command by offsetting the \texttt{control-points} property of the \texttt{Slur} object. Here, \texttt{\textbackslash offset} is a list of number-pair-lists, one
for each slur segment. This example achieves a result identical to the corresponding illustration at Section 5.4.11 [Modifying shapes], page 713.

\begin{verbatim}
{ 
   c'4 \offset control-points #( 
      
   (0 . 0) (0 . 0) (0 . 0) (0 . 1)) 
   (0 . 1.5) (1 . 0) (0 . 0) (0 . -1.5)) 
  \break
  d'4 c'' f' c'
}
\end{verbatim}

5.3.7 Modifying alists

Some user-configurable properties are internally represented as alists (association lists), which store pairs of keys and values. The structure of an alist is:

\begin{verbatim}
'((key1 . value1) 
  (key2 . value2) 
  (key3 . value3) 
  ...)
\end{verbatim}

If an alist is a grob property or \paper variable, its keys can be modified individually without affecting other keys.

For example, to reduce the space between adjacent staves in a staff group, use the staff-staff-spacing property of the StaffGrouper grob. The property is an alist with four keys: basic-distance, minimum-distance, padding, and stretchability. The standard settings for this property are listed in the “Backend” section of the Internals Reference (see Section “StaffGrouper” in Internals Reference):

\begin{verbatim}
'((basic-distance . 9) 
  (minimum-distance . 7) 
  (padding . 1) 
  (stretchability . 5))
\end{verbatim}

One way to bring the staves closer together is by reducing the value of the basic-distance key (9) to match the value of minimum-distance (7). To modify a single key individually, use a nested declaration:

\begin{verbatim}
% default space between staves 
\new PianoStaff << 
  \new Staff { \clef treble c''1 } 
  \new Staff { \clef bass c1 } 
>>

% reduced space between staves 
\new PianoStaff \with { 
  % this is the nested declaration 
  \override StaffGrouper.staff-staff-spacing.basic-distance = #7 
} <<
\end{verbatim}
Using a nested declaration will update the specified key (such as basic-distance in the above example) without altering any other keys already set for the same property.

Now suppose we want the staves to be as close as possible without overlapping. The simplest way to do this is to set all four alist keys to zero. However, it is not necessary to enter four nested declarations, one for each key. Instead, the property can be completely redefined with one declaration, as an alist:

\begin{verbatim}
\new PianoStaff \with {
\override StaffGrouper.staff-staff-spacing = #'( (basic-distance . 0)
                                             (minimum-distance . 0)
                                             (padding . 0)
                                             (stretchability . 0))
} <<
\new Staff { \clef treble c''1 }
\new Staff { \clef bass c1 }
\end{verbatim}

Note that any keys not explicitly listed in the alist definition will be reset to their default-when-unset values. In the case of staff-staff-spacing, any unset key values would be reset to zero (except stretchability, which takes the value of basic-distance when unset). Thus the following two declarations are equivalent:

\begin{verbatim}
\override StaffGrouper.staff-staff-spacing = #'( (basic-distance . 7))
\override StaffGrouper.staff-staff-spacing = #'( (basic-distance . 7)
                                             (minimum-distance . 0)
                                             (padding . 0)
                                             (stretchability . 7))
\end{verbatim}

One (possibly unintended) consequence of this is the removal of any standard settings that are set in an initialization file and loaded each time an input file is compiled. In the above example,
the standard settings for padding and minimum-distance (defined in `scm/define-grobs.scm`) are reset to their default-when-unset values (zero for both keys). Defining a property or variable as an alist (of any size) will always reset all unset key values to their default-when-unset values. Unless this is the intended result, it is safer to update key values individually with a nested declaration.

![Note: Nested declarations will not work for context property alists (such as beamExceptions, keyAlterations, timeSignatureSettings, etc.). These properties can only be modified by completely redefining them as alists.]

### 5.4 Useful concepts and properties

This section discusses various common layout issues and the tweaking methods related to them.

Installed Files: `scm/define-grobs.scm`.

Snippets: Section “Tweaks and overrides” in *Snippets*.

Internals Reference: Section “All layout objects” in *Internals Reference*.

#### 5.4.1 Direction and placement

In typesetting music the direction and placement of many items is a matter of choice. For example, the stems of notes can be directed up or down; lyrics, dynamics, and other expressive marks may be placed above or below the staff; text may be aligned left, right or center; etc. Most of these choices may be left to be determined automatically by LilyPond, but in some cases it may be desirable to force a particular direction or placement.

**Articulation direction indicators**

By default some directions are always up or always down (e.g., dynamics or fermata), while other things can alternate between up or down based on the stem direction (like slurs or accents).

The default action may be overridden by prefixing the articulation by a *direction indicator*. Three direction indicators are available: `^` (meaning “up”), `_` (meaning “down”) and `-` (meaning “use default direction”). The direction indicator can usually be omitted, in which case `-` is assumed, but a direction indicator is always required before

- `\tweak` commands
- `\markup` commands
- `\tag` commands
- string markups, e.g., `-"string"
- fingering instructions, e.g., `-1
- articulation shortcuts, e.g., `-., ->, --

Direction indicators affect only the next note:

```
\relative {  
```
The direction property

The position or direction of many layout objects is controlled by the direction property.

The value of the direction property may be set to 1, meaning “up” or “above”, or to -1, meaning “down” or “below”. The symbols UP and DOWN may be used instead of 1 and -1 respectively. The default direction may be specified by setting direction to 0 or CENTER. Alternatively, in many cases predefined commands exist to specify the direction. These are of the form

\xxxUp, \xxxDown or \xxxNeutral

where \xxxNeutral means “use the default” direction. See Section “Within-staff objects” in Learning Manual.

In a few cases, arpeggio for example, the value of the direction property can specify whether the object is to be placed to the right or left of the parent. In this case -1 or LEFT means “to the left” and 1 or RIGHT means “to the right”. 0 or CENTER means “use the default” direction.

These indications affect all notes until they are canceled.

\relative {
    c''2( c)
    \slurDown
c2( c)
    \slurNeutral
c2( c)
}

In polyphonic music, it is generally better to specify an explicit voice than change an object’s direction. For more information, see Section 1.5.2 [Multiple voices], page 195.

See also

Notation Reference: Section 1.5.2 [Multiple voices], page 195.

5.4.2 Distances and measurements

Distances in LilyPond are of two types: absolute and scaled.

Absolute distances are used for specifying margins, indents, and other page layout details, and are by default specified in millimeters. In general, distance units may be specified by appending \mm (millimeter), \cm (centimeter), \in (inches), \pt (points), or \bp (big points).

<table>
<thead>
<tr>
<th>mm</th>
<th>cm</th>
<th>in</th>
<th>pt</th>
<th>bp</th>
</tr>
</thead>
<tbody>
<tr>
<td>mm</td>
<td>1</td>
<td>0.1</td>
<td>0.0394</td>
<td>2.8453</td>
</tr>
</tbody>
</table>
Page layout distances can also be specified in scalable units (see the following paragraph) by appending `\staff-space` to the quantity. See Section 4.1 [Page layout], page 597, for a detailed description of LilyPond’s page layout.

Scaled distances are always specified in units of the staff space or, rarely, the half staff space. The staff space is the distance between two adjacent staff lines. The default value can be changed globally by setting the global staff size, or it can be overridden locally by changing the `staff-space` property of `StaffSymbol`. Scaled distances automatically scale with any change to the either the global staff size or the `staff-space` property of `StaffSymbol`, but fonts scale automatically only with changes to the global staff size. The global staff size thus enables the overall size of a rendered score to be easily varied. For the methods of setting the global staff size see Section 4.2.2 [Setting the staff size], page 610.

If just a section of a score needs to be rendered to a different scale, for example an ossia section or a footnote, the global staff size cannot simply be changed as this would affect the entire score. In such cases the change in size is made by overriding both the `staff-space` property of `StaffSymbol` and the size of the fonts. A Scheme function, `magstep`, is available to convert from a font size change to the equivalent change in `staff-space`. For an explanation and an example of its use, see Section “Length and thickness of objects” in Learning Manual.

See also

Notation Reference: Section 4.1 [Page layout], page 597, Section 4.2.2 [Setting the staff size], page 610.

5.4.3 Dimensions
The dimensions of a graphical object specify the positions of the left and right edges and the bottom and top edges of the objects’ bounding box as distances from the objects’ reference point in units of staff spaces. These positions are usually coded as two Scheme pairs. For example, the text markup command `\with-dimensions` takes three arguments, the first two of which are a Scheme pair giving the left and right edge positions and a Scheme pair giving the bottom and top edge positions:

```
\with-dimensions #'(-5 . 10) #'(-3 . 15) arg
```

This specifies a bounding box for `arg` with its left edge at -5, its right edge at 10, its bottom edge at -3 and its top edge at 15, all measured from the objects’ reference point in units of staff spaces.

See also
Notation Reference: Section A.12.8 [Other markup commands], page 808, (documentation for commands similar to `\with-dimensions`, such as `\with-dimension` or `\with-dimension-from`), Section 5.4.2 [Distances and measurements], page 691.

5.4.4 Spanners
Many objects of musical notation extend over several notes or even several bars. Examples are slurs, beams, tuplet brackets, volta repeat brackets, crescendi, trills, and glissandi. Such objects are collectively called “spanners”, and have special properties to control their appearance and behavior, as well as special tweaking methods related to the fact that they can be broken across systems.
Modifying broken spanners

When a spanner crosses a line break or breaks, each piece inherits the attributes of the original spanner. Thus, ordinary tweaking of a broken spanner applies the same modifications to each of its segments. In the example below, overriding thickness affects the slur on either side of the line break.

\relative c'' { 
  r2
  \once\override Slur.thickness = 10 
  c8( d e f 
  \break
  g8 f e d) r2
}

Independently modifying the appearance of individual pieces of a broken spanner is possible with the \alterBroken command. This command can produce either an \override or a \tweak of a spanner property.

The syntax for \alterBroken is

\[-]\alterBroken property values target

The argument values is a list of values, one for each broken piece. If target is a grob name like Slur or Staff.PianoPedalBracket, the result is an \override of the specified grob type. If target is a music expression such as ‘(‘ or ‘[’ the result is the same music expression with an appropriate tweak applied.

The leading hyphen must be used with the \tweak form. Do not add it when \alterBroken is used as an \override.

In its \override usage, \alterBroken may be prefaced by \once or \temporary and reverted by using \revert with property (see Section “Intermediate substitution functions” in Extending).

The following code applies an independent \override to each of the slur segments in the previous example:

\relative c'' { 
  r2
  \alterBroken thickness #'(10 1) Slur 
  c8( d e f 
  \break
  g8 f e d) r2
}
The `\alterBroken` command may be used with any spanner object, including Tie, PhrasingSlur, Beam and TextSpanner. For example, an editor preparing a scholarly edition may wish to indicate the absence of part of a phrasing slur in a source by dashing only the segment which has been added. The following example illustrates how this can be done, in this case using the `\tweak` form of the command:

```plaintext
% The empty list is conveniently used below, because it is the default setting of dash-definition, resulting in a solid curve.
\relative { 
  c''2-\alterBroken dash-definition #'(() ((0 1.0 0.4 0.75))) \(e \break g2 e\) 
} 
```

It is important to understand that `\alterBroken` sets each piece of a broken spanner to the corresponding value in `values`. When there are fewer values than pieces, any additional piece will be assigned the empty list. This may lead to undesired results if the layout property is not set to the empty list by default. In such cases, each segment should be assigned an appropriate value.

**Known issues and warnings**

Line breaks may occur in different places following changes in layout. Settings chosen for `\alterBroken` may be unsuitable for a spanner that is no longer broken or is split into more segments than before. Explicit use of `\break` can guard against this situation.

The `\alterBroken` command is ineffective for spanner properties accessed before line breaking such as direction.

**See also**

Extending LilyPond: Section “Difficult tweaks” in *Extending*.

**Setting minimum lengths for spanners**

The spanner-interface interface provides three properties that apply to several spanners.

**The minimum-length property**

The minimum length of the spanner is specified by the `minimum-length` property. Increasing this usually has the necessary effect of increasing the spacing of the notes between the two end points. However, this override has no effect on many spanners, as their length is determined by other considerations. A few examples where it is effective are shown below.

```plaintext
a'- a'
a'\ % increase the length of the tie
-\tweak minimum-length #5
- a'
```
This override can also be used to increase the length of slurs and phrasing slurs:

\relative {
  a' \< a a a \!
  \once \override Hairpin.minimum-length = #20
  a \< a a a \!
}

For some layout objects, the minimum-length property becomes effective only if the set-spacing-rods procedure is called explicitly. To do this, the springs-and-rods property should be set to ly:spanner::set-spacing-rods. For example, the minimum length of a glissando has no effect unless the springs-and-rods property is set:

% default
e' \glissando c''

% not effective alone
\once \override Glissando.minimum-length = #20
\glissando e' g' g'
% effective only when both overrides are present
\once \override Glissando.minimum-length = #20
\once \override Glissando.springs-and-rods =
  ly:spanner::set-spacing-rods e' g' g' g'

The same is true of the Beam object:
% not effective alone
\once \override Beam.minimum-length = #20
e'8 e' e' e'
% effective only when both overrides are present
\once \override Beam.minimum-length = #20
\once \override Beam.springs-and-rods =
  ly:spanner::set-spacing-rods e'8 e' e' e'

The \textit{minimum-length-after-break} property

The property \textit{minimum-length-after-break} can be used to stretch broken spanners starting after a line break. As for the \textit{minimum-length} property, it is often needed to set the \textit{springs-and-rods} property to \texttt{ly:spanner::set-spacing-rods}.

\begin{verbatim}
{ \once \override Tie.minimum-length-after-break = 20
  a1-
  \break
  a1

  \once \override Slur.minimum-length-after-break = 20
  a1?
  \break
  d'1)

  \once \override TextSpanner.springs-and-rods =
    ly:spanner::set-spacing-rods
  \once \override TextSpanner.minimum-length-after-break = 20
  a1\startTextSpan
  \break
  a1\stopTextSpan

  \once \override Hairpin.after-line-breaking = ##t
  \once \override Hairpin.to-barline = ##f
  \once \override Hairpin.minimum-length-after-break = 20
\end{verbatim}
Controlling spanner end points

The `to-barline` property of the spanner-interface, usually defaulting to true, causes hairpins and other spanners that are terminated on the first note of a measure to end instead on the immediately preceding bar line. If set to false, the spanner extends beyond the bar line and end on the note itself:

```latex
\relative {  
a' \langle a a a a ! a a a \break  
\override Hairpin.to-barline = ##f  
a \langle a a a a \! a a a  }
```
This property is not effective for all spanners. For example, setting it to \texttt{#t} has no effect on slurs or phrasing slurs or on other spanners for which terminating on the bar line would not be meaningful.

5.4.5 Line styles

The Section “line-interface” in Internals Reference groups all objects printing lines. All objects supporting these interfaces can be printed using different line styles. Here is an example showing the available values.

```latex
\relative { 
  \once \override \Glissando.style = #'dashed-line
  \d,2 \glissando \d,2
  \override \Glissando.style = #'dotted-line
  \d,2 \glissando \d,2
  \override \Glissando.style = #'zigzag
  \d,2 \glissando \d,2
  \override \Glissando.style = #'trill
  \d,2 \glissando \d,2
} 
```

Some objects may support specific additional styles.

5.4.6 Line spanners

Some performance indications, e.g., \textit{rallentando} and \textit{accelerando} and trills are written as text and are extended over many measures with lines, sometimes dotted or wavy.

The locations of the two end points of the spanner are computed on the fly, but it is possible to override their Y-coordinates. The properties that need to be specified are nested two levels down within the property hierarchy, but the syntax of the \texttt{\override} command is quite simple:

```latex
\once \override \Glissando.bound-details.left.Y = #3
\once \override \Glissando.bound-details.right.Y = #-2
\\e,2 \\glissando \b'
```

The units for the Y property are \textit{staff spaces}, with the center line of the staff being the zero point. For the glissando, this is the value for Y at the X-coordinate corresponding to the center point of each note head, if the line is imagined to be extended to there.
If \( Y \) is not set, the value is computed from the vertical position of the corresponding attachment point of the spanner.

In case of a line break, the values for the end points are specified by the left-broken and right-broken sublists of bound-details. For example:

\[ \text{\texttt{\textbackslash{override} Glissando\textprovide{.breakable} = \texttt{##t}}} \]
\[ \text{\texttt{\textbackslash{override} Glissando\textprovide{.bound-details.right-broken.}Y = \texttt{#-3}}} \]
\[ c''1 \text{\textbackslash{glissando \textprovide{break}}} \]
\[ f''1 \]

![Example notation](image)

A number of further properties of the left and right sublists of the bound-details property may be modified in the same way as \( Y \):

**\( Y \)**

This sets the Y-coordinate of the end point, measured in staff spaces from the staff center line. By default, it is the center of the bound object, so a glissando points to the vertical center of the note head.

For horizontal spanners, such as text spanners and trill spanners, it is hardcoded to 0.

**attach-dir**

This determines where the line starts and ends in the X-direction, relative to the bound object. So, a value of -1 (or \texttt{LEFT}) makes the line start/end at the left side of the note head it is attached to.

**\( X \)**

This is the absolute X-coordinate of the end point. It is usually computed on the fly, and overriding it has little useful effect.

**stencil**

Line spanners may have symbols at the beginning or end, which is contained in this subproperty. This is for internal use; it is recommended that \texttt{text} be used instead.

**text**

This is a markup that is evaluated to yield the stencil. It is used to put cresc., tr, and other text on horizontal spanners.

\[ \text{\texttt{\textbackslash{override} TextSpanner\textprovide{.bound-details.left.text}}} \]
\[ = \text{\texttt{\textbackslash{markup} \{ \text{\texttt{\small \texttt{\bold Slower}}} \}}} \]
\[ \text{\texttt{\textbackslash{relative} \{ c''2\text{\textbackslash{startTextSpan} b c a\text{\textbackslash{stopTextSpan}}} \}}} \]

![Example notation](image)

**stencil-align-dir-y**

**stencil-offset**

Without setting one of these, the stencil is simply put at the end point, centered on the line, as defined by the \( X \) and \( Y \) subproperties. Setting either \texttt{stencil-align-dir-y} or \texttt{stencil-offset} will move the symbol at the edge vertically relative to the end point of the line:

\[ \text{\texttt{\textbackslash{override} TextSpanner\textprovide{.bound-details}}} \]
\[ .\text{\texttt{left.stencil-align-dir-y = \texttt{#-2}}} \]
\override TextSpanner.bound-details.
.right.stencil-align-dir-y = #UP

\override TextSpanner.bound-details.left.text = "ggg"
\override TextSpanner.bound-details.right.text = "hhh"

\relative { c'4 \startTextSpan c c c \stopTextSpan }

Note that negative values move the text up, contrary to the effect that might be expected, as a value of -1 or DOWN means align the bottom edge of the text with the spanner line. A value of 1 or UP aligns the top edge of the text with the spanner line.

arrow Setting this subproperty to #t produces an arrowhead at the end points of the line.

padding This subproperty controls the space between the specified end point of the line and the actual end. Without padding, a glissando would start and end in the center of each note head.

The music function \endSpanners terminates the spanner which starts on the immediately following note prematurely. It is terminated after exactly one note, or at the following bar line if \to-barline is true and a bar line occurs before the next note.

\relative c'' { \endSpanners c2 \startTextSpan c2 c2 \endSpanners c2 \< c2 c2 }

When using \endSpanners it is not necessary to close \startTextSpan with \stopTextSpan, nor is it necessary to close hairpins with \!.

See also

5.4.7 Visibility of objects

There are four main ways in which the visibility of layout objects can be controlled: their stencil can be removed, they can be made transparent, they can be colored white, or their break-visibility property can be overridden. The first three apply to all layout objects; the last to just a few – the breakable objects. The Learning Manual introduces these four techniques, see Section “Visibility and color of objects” in Learning Manual.

There are also a few other techniques which are specific to certain layout objects. These are covered under Special considerations.
Removing the stencil

Every layout object has a stencil property. By default this is set to the specific function which
draws that object. If this property is overridden to #f no function will be called and the object
will not be drawn. The default action can be recovered with \revert.

```
\override Score.BarLine.stencil = ##f
\revert Score.BarLine.stencil
```

This rather common operation has a shortcut \omit:

```
\omit Score.BarLine
\undo \omit Score.BarLine
```

Making objects transparent

Every layout object has a transparent property which by default is set to #f. If set to #t the
object still occupies space but is made invisible.

```
\once \override NoteHead.transparent = ##t
```

This rather common operation has a shortcut \hide:

```
\hide NoteHead
```

Painting objects white

Every layout object has a color property which by default is set to black. If this is overridden
to white the object will be indistinguishable from the white background. However, if the object
crosses other objects the color of the crossing points will be determined by the order in which
they are drawn, and this may leave a ghostly image of the white object, as shown here:

```
\override Staff.Clef.color = #white
```
This may be avoided by changing the order of printing the objects. All layout objects have a\texttt{layer} property which should be set to an integer. Objects with the lowest value of\texttt{layer} are drawn first, then objects with progressively higher values are drawn, so objects with higher values overwrite objects with lower values. By default most objects are assigned a\texttt{layer} value of 1, although a few objects, including\texttt{StaffSymbol} and\texttt{BarLine}, are assigned a value of 0. The order of printing objects with the same value of\texttt{layer} is indeterminate.

In the example above the white clef, with a default\texttt{layer} value of 1, is drawn after the staff lines (default\texttt{layer} value 0), so overwriting them. To change this, the\texttt{Clef} object must be given in a lower value of\texttt{layer}, say -1, so that it is drawn earlier:

\begin{verbatim}
\override Staff.Clef.color = #white
\override Staff.Clef.layer = #-1
\end{verbatim}

Selected Snippets

\textbf{Using the whiteout property}

Any graphical object can be printed over a white background to mask parts of objects that lie beneath. This can be useful to improve the appearance of collisions in complex situations when repositioning objects is impractical. It is necessary to explicitly set the\texttt{layer} property to control which objects are masked by the white background. In this example the collision of the tie with the time signature is improved by masking out the part of the tie that crosses the time signature by setting the\texttt{whiteout} property of\texttt{TimeSignature}. To do this\texttt{TimeSignature} is moved to a layer above\texttt{Tie}, which is left in the default layer of 1, and\texttt{StaffSymbol} is moved to a layer above\texttt{TimeSignature} so it is not masked.

\begin{verbatim}
{ 
\override Score.StaffSymbol.layer = #4
\override Staff.TimeSignature.layer = #3
b'2 b'-
\once \override Staff.TimeSignature.whiteout = ##t
\time 3/4
b' r4
}
\end{verbatim}

\textbf{Using break-visibility}

Most layout objects are printed only once, but some like bar lines, clefs, time signatures and key signatures, may need to be printed twice when a line break occurs – once at the end of the line and again at the start of the next line. Such objects are called\textit{breakable}, and have a property, the\texttt{break-visibility} property to control their visibility at the three positions in which they
may appear – at the start of a line, within a line if they are changed, and at the end of a line if a change takes place there.

For example, the time signature by default will be printed at the start of the first line, but nowhere else unless it changes, when it will be printed at the point at which the change occurs. If this change occurs at the end of a line the new time signature will be printed at the start of the next line and a cautionary time signature will be printed at the end of the previous line as well.

This behavior is controlled by the break-visibility property, which is explained in Section “Visibility and color of objects” in Learning Manual. This property takes a vector of three booleans which, in order, determine whether the object is printed at the end of, within the body of, or at the beginning of a line. Or to be more precise, before a line break, where there is no line break, or after a line break.

Alternatively, these eight combinations may be specified by predefined functions, defined in scm/output-lib.scm, where the last three columns indicate whether the layout objects will be visible in the positions shown at the head of the columns:

<table>
<thead>
<tr>
<th>Function form</th>
<th>Vector form</th>
<th>Before break</th>
<th>At no break</th>
<th>After break</th>
</tr>
</thead>
<tbody>
<tr>
<td>all-visible</td>
<td>#(t t t)</td>
<td>yes</td>
<td>yes</td>
<td>yes</td>
</tr>
<tr>
<td>begin-of-line-visible</td>
<td>#(f f t t)</td>
<td>no</td>
<td>no</td>
<td>yes</td>
</tr>
<tr>
<td>center-visible</td>
<td>#(f t f)</td>
<td>no</td>
<td>yes</td>
<td>no</td>
</tr>
<tr>
<td>end-of-line-visible</td>
<td>#(t f f)</td>
<td>yes</td>
<td>no</td>
<td>no</td>
</tr>
<tr>
<td>begin-of-line-invisible</td>
<td>#(t t f)</td>
<td>yes</td>
<td>yes</td>
<td>no</td>
</tr>
<tr>
<td>center-invisible</td>
<td>#(t f t)</td>
<td>yes</td>
<td>no</td>
<td>yes</td>
</tr>
<tr>
<td>end-of-line-invisible</td>
<td>#(f t t)</td>
<td>no</td>
<td>yes</td>
<td>yes</td>
</tr>
<tr>
<td>all-invisible</td>
<td>#(f f f)</td>
<td>no</td>
<td>no</td>
<td>no</td>
</tr>
</tbody>
</table>

The default settings of break-visibility depend on the layout object. The following table shows all the layout objects of interest which are affected by break-visibility and the default setting of this property:

<table>
<thead>
<tr>
<th>Layout object</th>
<th>Usual context</th>
<th>Default setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>BarLine</td>
<td>Score</td>
<td>calculated</td>
</tr>
<tr>
<td>BarNumber</td>
<td>Score</td>
<td>begin-of-line-visible</td>
</tr>
<tr>
<td>BreathingSign</td>
<td>Voice</td>
<td>begin-of-line-invisible</td>
</tr>
<tr>
<td>Clef</td>
<td>Staff</td>
<td>begin-of-line-visible</td>
</tr>
<tr>
<td>Custos</td>
<td>Staff</td>
<td>end-of-line-visible</td>
</tr>
<tr>
<td>Divisio</td>
<td>Staff</td>
<td>begin-of-line-invisible</td>
</tr>
<tr>
<td>DoublePercentRepeat</td>
<td>Voice</td>
<td>begin-of-line-invisible</td>
</tr>
<tr>
<td>KeyCancellation</td>
<td>Staff</td>
<td>begin-of-line-invisible</td>
</tr>
<tr>
<td>KeySignature</td>
<td>Staff</td>
<td>begin-of-line-visible</td>
</tr>
<tr>
<td>ClefModifier</td>
<td>Staff</td>
<td>begin-of-line-visible</td>
</tr>
<tr>
<td>RehearsalMark</td>
<td>Score</td>
<td>end-of-line-invisible</td>
</tr>
<tr>
<td>TimeSignature</td>
<td>Staff</td>
<td>all-visible</td>
</tr>
</tbody>
</table>

The example below shows the use of the vector form to control the visibility of bar lines:

```latex
\relative { 
  f'4 g a b 
  f4 g a b 
  \break 
  \once \override Score.BarLine.break-visibility = ##(#f t t)
} 
```
Although all three components of the vector used to override break-visibility must be present, not all of them are effective with every layout object, and some combinations may even give errors. The following limitations apply:

- Bar lines cannot be printed at the start of line.
- A bar number cannot be printed at the start of the first line unless it is set to be different from 1.
- Clef – see the next section.
- Double percent repeats are either all printed or all suppressed. Use begin-of-line-invisible to print them and all-invisible to suppress them.
- Key signature – see the next section.
- ClefModifier – see the next section.

Special considerations

Visibility following explicit changes

The break-visibility property controls the visibility of key signatures and changes of clef only at the start of lines, i.e., after a break. It has no effect on the visibility of the key signature or clef following an explicit key change or an explicit clef change within or at the end of a line. In the following example the key signature following the explicit change to B-flat major is still visible, even though all-invisible is set.

\relative {  
\key g \major  
f'4 g a b  
% Try to remove all key signatures  
\override Staff.KeySignature.break-visibility = #all-invisible  
\key bes \major  
f4 g a b  
\break  
f4 g a b  
f4 g a b  
}  

\relative {  
\key g \major  
f'4 g a b  
% Try to remove all key signatures  
\override Staff.KeySignature.break-visibility = #all-invisible  
\key bes \major  
f4 g a b  
\break  
f4 g a b  
f4 g a b  
}
The visibility of such explicit key signature and clef changes is controlled by the `explicitKeySignatureVisibility` and `explicitClefVisibility` properties. These are the equivalent of the `break-visibility` property and both take a vector of three booleans or the predefined functions listed above, exactly like `break-visibility`. Both are properties of the Staff context, not the layout objects themselves, and so they are set using the `\set` command. Both are set by default to `all-visible`. These properties control only the visibility of key signatures and clefs resulting from explicit changes and do not affect key signatures and clefs at the beginning of lines; `break-visibility` must still be overridden in the appropriate object to remove these.

```latex
\relative { 
  \key g \major 
  f'4 g a b 
  \set Staff.explicitKeySignatureVisibility = #all-invisible 
  \override Staff.KeySignature.break-visibility = #all-invisible 
  \key bes \major 
  f4 g a b \break 
  f4 g a b 
  f4 g a b 
} 
```

Visibility of cancelling accidentals

To remove the cancelling accidentals printed at an explicit key change, set the Staff context property `printKeyCancellation` to `#f`:

```latex
\relative { 
  \key g \major 
  f'4 g a b 
  \set Staff.explicitKeySignatureVisibility = #all-invisible 
  \set Staff.printKeyCancellation = ##f 
  \override Staff.KeySignature.break-visibility = #all-invisible 
  \key bes \major 
  f4 g a b \break 
  f4 g a b 
  f4 g a b 
} 
```

With these overrides only the accidentals before the notes remain to indicate the change of key.
Note that when changing the key to C major or A minor the cancelling accidentals would be the only indication of the key change. In this case setting printKeyCancellation to #f has no effect:

```
\relative {
  \key g \major
  f'4 g a b
  \set Staff.explicitKeySignatureVisibility = #all-invisible
  \set Staff.printKeyCancellation = ##f
  \key c \major
  f4 g a b \break
  f4 g a b
  f4 g a b
}
```

To suppress the cancelling accidentals even when the key is changed to C major or A minor, override the visibility of the KeyCancellation grob instead:

```
\relative {
  \key g \major
  f'4 g a b
  \set Staff.explicitKeySignatureVisibility = #all-invisible
  \override Staff.KeyCancellation.break-visibility = #all-invisible
  \key c \major
  f4 g a b \break
  f4 g a b
  f4 g a b
}
```

Transposed clefs

The small transposition symbol on transposed clefs is produced by the ClefModifier layout object. Its visibility is automatically inherited from the Clef object, so it is not necessary to apply any required break-visibility overrides to the ClefModifier layout objects to suppress transposition symbols for invisible clefs.

For explicit clef changes, the explicitClefVisibility property controls both the clef symbol and any transposition symbol associated with it.

See also

5.4.8 Rotating objects

Both layout objects and elements of markup text can be rotated by any angle about any point, but the method of doing so differs.

Rotating layout objects

All layout objects which support the `grob-interface` can be rotated by setting their `rotation` property. This takes a list of three items: the angle of rotation counter-clockwise, and the x and y coordinates of the point relative to the object’s reference point about which the rotation is to be performed. The angle of rotation is specified in degrees and the coordinates in staff spaces.

The angle of rotation and the coordinates of the rotation point must be determined by trial and error.

There are only a few situations where the rotation of layout objects is useful; the following example shows one situation where they may be:

```
g4\< e' d'' f''\!
\override Hairpin.rotation = #'(15 -1 0)
g4\< e' d'' f''\!
```

Rotating markup

All markup text can be rotated to lie at any angle by prefixing it with the `\rotate` command. The command takes two arguments: the angle of rotation in degrees counter-clockwise and the text to be rotated. The extents of the text are not rotated: they take their values from the extremes of the x and y coordinates of the rotated text. In the following example the `outside-staff-priority` property for text is set to `#f` to disable the automatic collision avoidance, which would push some of the text too high.

```
\override TextScript.outside-staff-priority = ##f
g4\markup { \rotate #30 "a G" }
b\markup { \rotate #30 "a B" }
des'\markup { \rotate #30 "a D-Flat" }
fis'\markup { \rotate #30 "an F-Sharp" }
```

5.4.9 Aligning objects

Graphical objects which support the `self-alignment-interface` and/or the `side-position-interface` can be aligned to a previously placed object in a variety of ways. For a list of these objects, see Section “self-alignment-interface” in Internals Reference and Section “side-position-interface” in Internals Reference.

All graphical objects have a reference point, a horizontal extent and a vertical extent. The horizontal extent is a pair of numbers giving the displacements from the reference point of the left and right edges, displacements to the left being negative. The vertical extent is a pair of numbers
Chapter 5: Changing defaults

An object’s position on a staff is given by the values of the X-offset and Y-offset properties. The value of X-offset gives the displacement from the X coordinate of the reference point of the parent object, and the value of Y-offset gives the displacement from the center line of the staff. The values of X-offset and Y-offset may be set directly or may be set to be calculated by procedures in order to achieve alignment with the parent object.

Note: Many objects have special positioning considerations which cause any setting of X-offset or Y-offset to be ignored or modified, even though the object supports the self-alignment-interface. Overriding the X-offset or Y-offset properties to a fixed value causes the respective self-alignment property to be disregarded.

For example, an accidental can be repositioned vertically by setting Y-offset but any changes to X-offset have no effect.

Rehearsal marks may be aligned with breakable objects such as bar lines, clef symbols, time signature symbols and key signatures. There are special properties to be found in the break-aligned-interface for positioning rehearsal marks on such objects.

See also
Notation Reference: [Using the break-alignable-interface], page 710.
Extending LilyPond: Section “Callback functions” in Extending.

Setting X-offset and Y-offset directly
Numerical values may be given to the X-offset and Y-offset properties of many objects. The following example shows three notes with the default fingering position and the positions with X-offset and Y-offset modified.

```
a’-3
a’-3
a’-3
-\tweak X-offset #0
-\tweak Y-offset #0
-\tweak X-offset #$-1
-\tweak Y-offset #$1
-3
```

Using the side-position-interface
An object which supports the side-position-interface can be placed next to its parent object so that the specified edges of the two objects touch. The object may be placed above, below, to the right or to the left of the parent. The parent cannot be specified; it is determined by the order of elements in the input stream. Most objects have the associated note head as their parent.

The values of the side-axis and direction properties determine where the object is to be placed, as follows:
Side-axis property direction property Placement

<table>
<thead>
<tr>
<th>side-axis</th>
<th>direction</th>
<th>Placement</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>-1</td>
<td>left</td>
</tr>
<tr>
<td>0</td>
<td>1</td>
<td>right</td>
</tr>
<tr>
<td>1</td>
<td>-1</td>
<td>below</td>
</tr>
<tr>
<td>1</td>
<td>1</td>
<td>above</td>
</tr>
</tbody>
</table>

When side-axis is 0, X-offset should be set to the procedure ly:side-position-interface::x-aligned-side. This procedure will return the correct value of X-offset to place the object to the left or right side of the parent according to value of direction.

When side-axis is 1, Y-offset should be set to the procedure ly:side-position-interface::y-aligned-side. This procedure will return the correct value of Y-offset to place the object to the top or bottom of the parent according to value of direction.

Using the self-alignment-interface

Self-aligning objects horizontally

The horizontal alignment of an object which supports the self-alignment-interface is controlled by the value of the self-alignment-X property, provided the object’s X-offset property is set to ly:self-alignment-interface::x-aligned-on-self. self-alignment-X may be given any real value, in units of half the total X extent of the object. Negative values move the object to the right, positive to the left. A value of 0 centers the object on the reference point of its parent, a value of -1 aligns the left edge of the object on the reference point of its parent, and a value of 1 aligns the right edge of the object on the reference point of its parent. The symbols LEFT, CENTER, and RIGHT may be used instead of the values -1, 0, and 1, respectively.

Normally the \override command would be used to modify the value of self-alignment-X, but the \tweak command can be used to separately align several annotations on a single note:

```
a'\
  \tweak self-alignment-X #-1 ^"left-aligned"\
  \tweak self-alignment-X #0 ^"center-aligned"\
  \tweak self-alignment-X #RIGHT ^"right-aligned"\
  \tweak self-alignment-X #-2.5 ^"aligned further to the right"
```

```
\override \score { \staff { \clef treble } \note c \right-aligned } \staff { \clef bass } \note c \center-aligned \staves { \note a \left-aligned \note d \aligned further to the right }\`
```

Self-aligning objects vertically

Objects may be aligned vertically in an analogous way to aligning them horizontally if the Y-offset property is set to ly:self-alignment-interface::y-aligned-on-self. However, other mechanisms are often involved in vertical alignment: the value of Y-offset is just one variable taken into account. This may make adjusting the value of some objects tricky. The units are just half the vertical extent of the object, which is usually quite small, so quite large numbers may be required. A value of -1 aligns the lower edge of the object with the reference point of the parent object, a value of 0 aligns the center of the object with the reference point
of the parent, and a value of 1 aligns the top edge of the object with the reference point of the parent. The symbols \texttt{DOWN}, \texttt{CENTER}, and \texttt{UP} may be substituted for -1, 0, and 1, respectively.

**Self-aligning objects in both directions**

By setting both \texttt{X-offset} and \texttt{Y-offset}, an object may be aligned in both directions simultaneously.

The following example shows how to adjust a fingering mark so that it nestles close to the note head.

```plaintext
a'
-tweak self-alignment-X #0.5 % move horizontally left
-tweak Y-offset #ly:self-alignment-interface::y-aligned-on-self
-tweak self-alignment-Y #-1 % move vertically up
-3 % third finger

\timesig.C4
\clef.G
\fattened.three
\noteheads.s2
```

**Using the break-alignable-interface**

Rehearsal marks, text marks, bar numbers, and more generally all objects with Section “break-alignable-interface” in Internals Reference, collectively referred to as “break-alignable objects”, may be aligned with notation objects such as bar lines, key signatures, time signatures, and generally any object with Section “break-aligned-interface” in Internals Reference. To be more precise, break-aligned items have a \texttt{break-align-symbol} property, providing symbols that can be used as ‘anchor points’ for other objects via the \texttt{break-align-symbols} property. See Section “break-alignment-interface” in Internals Reference, for a complete list of available symbols.

Each type of object has its own default reference point, to which break-alignable items are aligned:

```plaintext
\override Score.TextMark.self-alignment-X = #CENTER
% The text mark will be aligned
% to the right edge of the clef
\override Score.TextMark.break-align-symbols = #'(clef)
\key a \major
\clef treble
\textMark "↓"
e'1
% The text mark will be aligned
% to the left edge of the time signature
\override Score.TextMark.break-align-symbols = #'(time-signature)
\key a \major
\clef treble
\time 3/4
\textMark "↓"
e'2.
% The text mark will be centered
% above the breathing mark
\override Score.TextMark.break-align-symbols = #'(breathing-sign)
\key a \major
```
A list of possible target alignment objects may be specified. If some of the objects are invisible at that point due to the setting of `break-visibility` or the explicit visibility settings for keys and clefs, the rehearsal mark or bar number is aligned to the first object in the list which is visible. If no objects in the list are visible the object is aligned to the bar line. If the bar line is invisible the object is aligned to the place where the bar line would be.

\override Score.TextMark.self-alignment-X = #CENTER  
% The text mark will be aligned  
% to the right edge of the key signature
\override Score.TextMark.break-align-symbols =  
#'(key-signature clef)
\key a \major \clef treble  
\textMark "↓" e'1  
% The text mark will be aligned  
% to the right edge of the clef
\set Staff.explicitKeySignatureVisibility = #all-invisible
\override Score.TextMark.break-align-symbols =  
#'(key-signature clef)
\key a \major \ clef bass  
\textMark "↓" gis,1  
% The text mark will be centered  
% above the bar line
\set Staff.explicitKeySignatureVisibility = #all-invisible
\set Staff.explicitClefVisibility = #all-invisible
\override Score.TextMark.break-align-symbols =  
#'(key-signature clef)
\key a \major \clef treble  
\textMark "↓" e'1

The alignment of the break-alignable item relative to the notation object can be changed, as shown in the following example. In a score with multiple staves, this setting should be done for all the staves.

\override Score.TextMark.self-alignment-X = #CENTER
\override Score.TextMark.break-align-symbols = #'(key-signature)
\key a \major
\clef treble
\time 4/4
\textMark "↓"
e'1
% The text mark will be centered
% above the key signature
\once \override Score.KeySignature.break-align-anchor-alignment = #CENTER
\textMark "↓"
\key a \major
e'1
% The text mark will be aligned
% with the left edge of the key signature
\once \override Score.KeySignature.break-align-anchor-alignment = #LEFT
\key a \major
\textMark "↓"
e'1

The break-alignable item can also be offset to the right or left of the left edge by an arbitrary amount. The units are staff spaces:

\override Score.TextMark.self-alignment-X = #CENTER
% The text mark will be aligned
% with the left edge of the key signature
% and then shifted right by 3.5 staff spaces
\once \override Score.TextMark.break-align-symbols = #'(key-signature)
\key a \major
\textMark "↓"
e'1
% The text mark will be aligned
% with the left edge of the key signature
% and then shifted left by 2 staff spaces
\once \override Score.KeySignature.break-align-anchor = #-2
\key a \major
\textMark "↓"
e'1
5.4.10 Modifying stencils

All layout objects have a stencil property which is part of the grob-interface. By default, this property is usually set to a function specific to the object that is tailor-made to render the symbol which represents it in the output. For example, the standard setting for the stencil property of the MultiMeasureRest object is ly:multi-measure-rest::print.

The standard symbol for any object can be replaced by modifying the stencil property to reference a different, specially-written, procedure. This requires a high level of knowledge of the internal workings of LilyPond, but there is an easier way which can often produce adequate results.

This is to set the stencil property to the procedure which prints text – ly:text-interface::print – and to add a text property to the object which is set to contain the markup text which produces the required symbol. Due to the flexibility of markup, much can be achieved – see in particular [Graphic notation inside markup], page 298.

The following example demonstrates this by changing the note head symbol to a cross within a circle.

```
XinO = {
\once \override NoteHead.stencil = #ly:text-interface::print
\once \override NoteHead.text = \markup {
\combine
    \halign #-0.7 \draw-circle #0.85 #0.2 ##f
    \musicglyph "noteheads.s2cross"
}
\relative {
    a' a \XinO a a
}
```

Any of the Feta glyphs used in the Emmentaler font can be supplied to the \musicglyph markup command – see Section A.8 [The Emmentaler font], page 735.

EPS files and Postscript commands can both be inserted inline using the \epsfile and \postscript markup commands respectively – see Section A.12.3 [Graphical markup], page 782.

5.4.11 Modifying shapes

Modifying ties and slurs

Ties, Slurs, Phrasing Slurs, Laissez Vibrer Ties and Repeat Ties are all drawn as third-order Bézier curves. If the shape of the tie or slur which is calculated automatically is not optimum, the shape may be modified manually in two ways:

a. by specifying the displacements to be made to the control points of the automatically calculated Bézier curve, or
b. by explicitly specifying the positions of the four control points required to define the wanted curve.
Both methods are explained below. The first method is more suitable if only slight adjustments to the curve are required; the second may be better for creating curves which are related to just a single note.

**Cubic Bézier curves**

Third-order or cubic Bézier curves are defined by four control points. The first and fourth control points are precisely the starting and ending points of the curve. The intermediate two control points define the shape. Animations showing how the curve is drawn can be found on the web, but the following description and image may be helpful. The curve starts from the first control point heading directly towards the second, gradually bending over to head towards the third and continuing to bend over to head towards the fourth, arriving there travelling directly from the third control point. The curve is entirely contained in the quadrilateral defined by the four control points.

Translations, rotations and scaling of the control points all result in exactly the same operations on the curve.

**Specifying displacements from current control points**

In this example the automatic placement of the tie is not optimum, and \tieDown would not help.

```
<<
{ e'1- 1 }
\`
\relative { r4 <g' c,> <g c,> <g c,> }
>>
```

Adjusting the control points of the tie with \shape allows the collisions to be avoided.

The syntax of \shape is

```
\[-\] \shape \displacements \item
```

This will reposition the control points of \item by the amounts given by \displacements. The \displacements argument is a list of number pairs or a list of such lists. Each element of a pair represents the displacement of one of the coordinates of a control point. If \item is a string, the result is \once\override for the specified grob type. If \item is a music expression, the result is the same music expression with an appropriate tweak applied.

In other words, the \shape function can act as either a \once\override command or a \tweak command depending on whether the \item argument is a grob name, like “Slur”, or a music expression, like “(``. The \displacements argument specifies the displacements of the four control points as a list of four pairs of (dx, dy) values in units of staff spaces (or a list of such lists if the curve has more than one segment).

The leading hyphen is required if and only if the \tweak form is being used.

So, using the same example as above and the \once\override form of \shape, this will raise the tie by half a staff space:

```
<<
```
This positioning of the tie is better, but maybe it should be raised more in the center. The following example does this, this time using the alternative \tweak form:

To aid the tweaking process, the \vshape function is provided. Its name means visual shape: it acts exactly like \shape, except that the control points and polygon are additionally displayed.

It is advisable to start with \vshape and adjust until a satisfactory curve is obtained, then simply remove the “v” letter in \vshape.

Two different curves starting at the same musical moment may also be shaped:
The \shape function can also displace the control points of curves which stretch across line breaks. Each piece of the broken curve can be given its own list of offsets. If changes to a particular segment are not needed, the empty list can serve as a placeholder. In this example the line break makes the single slur look like two:

\relative {  
c'4( f g c  
\break  
d,4 c' f, c)  
}

Changing the shapes of the two halves of the slur makes it clearer that the slur continues over the line break:

\relative {  
c4( f g c  
\shape #'((0 . 0) (0 . 0) (0 . 0) (0 . 1))  
((0.5 . 1.5) (1 . 0) (0 . 0) (0 . -1.5))  
) Slur  
c4( f g c  
\break  
d,4 c' f, c)  
}

If an S-shaped curve is required the control points must always be adjusted manually – LilyPond will never select such shapes automatically.
Specifying control points explicitly

The coordinates of the Bézier control points are specified in units of staff spaces. The X coordinate is relative to the reference point of the note to which the tie or slur is attached, and the Y coordinate is relative to the staff center line. The coordinates are specified as a list of four pairs of decimal numbers (reals). One approach is to estimate the coordinates of the two end points, and then guess the two intermediate points. The optimum values are then found by trial and error. Be aware that these values may need to be manually adjusted if any further changes are made to the music or the layout.

One situation where specifying the control points explicitly is preferable to specifying displacements is when they need to be specified relative to a single note. Here is an example of this. It shows one way of indicating a slur extending into alternative sections of a volta repeat.

\relative {c''1\repeat volta 3 { c4 \(e f\) }\alternative \volta 1 \{ g2 \(d\) \}}\volta 2 {\% create a slur and move it to a new position\% the <> is just an empty chord to carry the slur termination\tweak control-points #'(\(-2.3\) \(-1.3.9\) \(0.4\) \(1.3.4\)) ( <> )\f,\}\volta 3 {\% create a slur and move it to a new position\tweak control-points #'(\(-2.3\) \(-1.3.1\) \(0.3.2\) \(1.2.4\)) ( <> )\f,\}}

Known issues and warnings

It is not possible to modify shapes of ties or slurs by changing the control-points property if there are multiple ties or slurs at the same musical moment – the \tweak command will also not work in this case. However, the tie-configuration property of TieColumn can be overridden to set start line and direction as required.

CSS color definitions differ from X color names for the following colors: green, grey, maroon, purple.

**X color names**

X11 color names ([https://en.wikipedia.org/wiki/X11_color_names](https://en.wikipedia.org/wiki/X11_color_names)) offer a wider choice than CSS names. They come in several variants:

- Any name that is spelled as a single word with capitalization (e.g., 'LightSlateBlue') can also be spelled as space-separated words with or without capitalization (e.g., 'light slate blue').
- The word ‘grey’ can always be spelled ‘gray’ (e.g., ‘DarkSlateGray’), without any difference in the output.
- Some names can take a numerical suffix (e.g., ‘LightSalmon4’).

Use the Scheme function `x11-color` to access them.

**Color Names without a numerical suffix**

The following table presents all color names that may be used without a numerical suffix.

<table>
<thead>
<tr>

Appendix A: Notation manual tables

Color names with a numerical suffix

A subset of the X11 color names may be used with a numerical suffix in the range 1 to 4 to get
darker shades. Note that for such colors, color foo is identical to color foo1.

The table for color names greyN looks the same.

Color-blind-safe colors

The Scheme function universal-color provides a set of eight colors (https://jfly.uni-koeln.de/color) designed to be unambiguous to people with dichromatism.

- Black
- Orange
- Skyblue
- Bluegreen
- Yellow
- Blue
- Vermillion
- Redpurple

A.8 The Emmentaler font

The Emmentaler font consists of two subsets of glyphs. “Feta”, used for classical notation and “Parmesan”, used for Ancient notation.

Any glyph within the Emmentaler font can be accessed directly by using text markup along with the name of the glyph (as shown in the tables below). For example:

`g\markup {\musicglyph "scripts.segno"}`

or

`\markup {\musicglyph "five"}`

For more information see Section 1.8.2 [Formatting text], page 287.

Clef glyphs

- Clefs.C
- Clefs.varC
- Clefs.F

Kievan

Example Output
\clef "kievan-do"

A.12 Text markup commands
The following commands can all be used inside \markup { }. 
A.12.1 Font markup

\abs-fontsize \texttt{size (number) arg (markup)}

Use \texttt{size} as the absolute font size (in points) to display \texttt{arg}. Adjusts baseline-skip and word-space accordingly.

\markup
\hspace #2 \abs-fontsize \texttt{#16 \{ text font size 16 \}}
\hspace #2 \abs-fontsize \texttt{#12 \{ text font size 12 \}}

default text font size \textbf{text font size 16} \textbf{text font size 12}

Used properties:
- baseline-skip (3)
- word-space (0.6)

\bold \texttt{arg (markup)}

Switch to bold font-series.

\markup
\hspace #2 \bold

\textbf{V. S.}

\caps \texttt{arg (markup)}

Copy of the \texttt{\smallCaps} command.

\markup
\hspace #2 \caps

Text in small caps
\textbf{default TEXT IN SMALL CAPS}

\texttt{\textbackslash{dynamic} arg} (markup)

Use the dynamic font. This font contains \texttt{s, f, m, z, p, and r}. When producing phrases, like ‘\texttt{pi\'u}', the normal words (like ‘\texttt{pi\'u}') should be done in a different font. The recommended font for this is bold and italic.

\begin{verbatim}
\texttt{\textbackslash{dynamic} { \texttt{sfzp} }}
\end{verbatim}

\texttt{sfzp}

\texttt{\textbackslash{figured-bass} arg} (markup)

Set \texttt{arg} as small numbers for figured bass. Specially slashed digits can be achieved with a trailing backslashes (for numbers 6, 7, and 9) or a trailing plus (for numbers 2, 4, and 5).\textsuperscript{1}

The use of a backslash is in analogy to \texttt{\textbackslash{figuremode}} (see [Entering figured bass], page 482). Note that to get a backslash character in markup it must be escaped by doubling it. Additionally, it must be put into double quotes.

\begin{verbatim}
\texttt{\textbackslash{figured-bass} { 2 3 4+ 7 "9\" }}
\end{verbatim}

\texttt{2 3 4 7 9\}

\texttt{\textbackslash{finger} arg} (markup)

Set \texttt{arg} as small numbers for fingering instructions.

\begin{verbatim}
\texttt{\textbackslash{finger} { 1 2 3 4 5 }}
\end{verbatim}

\texttt{1 2 3 4 5}

\texttt{\textbackslash{fontCaps} arg} (markup)

Set \texttt{font-shape} to caps

Note: \texttt{\textbackslash{fontCaps}} requires the installation and selection of fonts which support the caps font shape.

\texttt{\textbackslash{fontsize} increment number} arg (markup)

Add \texttt{increment} to the font-size. Adjusts baseline-skip accordingly.

\begin{verbatim}
\texttt{\textbackslash{fontsize #2}}
\end{verbatim}

\textsuperscript{1} Internally, this works by activating the ‘dlig’ OpenType feature of the Emmentaler font.
\fontsize{-#1.5
smaller
}
default smaller

Used properties:
• baseline-skip (2)
• word-space (1)
• font-size (0)
\huge arg (markup)
Set font size to +2.
\markup{
default
\hspace #2
\huge
huge
}
default huge

\italic arg (markup)
Use italic font-shape for arg.
\markup{
default
\hspace #2
\italic
italic
}
default italic

\large arg (markup)
Set font size to +1.
\markup{
default
\hspace #2
\large
large
}
default large

\larger arg (markup)
Increase the font size relative to the current setting.
\markup{
default
\hspace #2
\larger
larger
}
default larger
\magnify sz (number) arg (markup)
Set the font magnification for its argument. In the following example, the middle A
is 10% larger:
\[ A \magnify #1.1 \{ A \} A \]
Note: Magnification only works if a font name is explicitly selected. Use \fontsize otherwise.
\[
\text{default} \\
\hspace #2 \\
\magnify #1.5 \\
50\% \text{ larger}
\]
\text{default 50\% larger}

\medium arg (markup)
Switch to medium font-series (in contrast to bold).
\[
\text{default} \\
\bold \\
\hspace #2 \\
\medium \\
medium \text{ font series}
\]
\hspace #2
\text{bold again}
\[
\text{some bold text} \hspace{#2} \text{medium font series} \hspace{#2} \text{bold again}
\]

\normal-size-sub arg (markup)
Set arg in subscript with a normal font size.
\[
\text{default} \\
\normal-size-sub \\
\text{subscript in standard size}
\]
\text{default subscript in standard size}

Used properties:
- font-size (0)

\normal-size-super arg (markup)
Set arg in superscript with a normal font size.
\[
\text{default} \\
\normal-size-super \\
\text{superscript in standard size}
\]
default superscript in standard size

Used properties:

- font-size (0)

\normal-text arg (markup)

Set all font related properties (except the size) to get the default normal text font, no matter what font was used earlier.

\normalsize arg (markup)

Set font size to default.

\number arg (markup)

Set font family to number, which yields the font used for digits. This font also contains some punctuation; it has no letters.

The appearance of digits in the Emmentaler font can be controlled with four OpenType features: ‘tnum’, ‘cv47’, ‘ss01’, and ‘kern’, which can be arbitrarily combined.

- \tnum If off (which is the default), glyphs ‘zero’ to ‘nine’ have no left and
di
tight side bearings. If on, the glyphs all have the same advance
width by making the bearings non-zero.

- \cv47 If on, glyphs ‘four’ and ‘seven’ have shorter vertical strokes. De-
di
fault is off.

- \ss01 If on, glyphs ‘zero’ to ‘nine’ have a fatter design, making them
more readable at small sizes. Default is off.
kern If on (which is the default), provide pairwise kerning between (most) glyphs.

\markuplist
\number
\fontsize #5
\override #'(padding . 2)
  (baseline-skip . 4)
  (box-padding . 0)
  (thickness . 0.1))
\table #'(-1 -1 -1 -1) {
  0123456789 \box 147 \concat { \box 1 \box 4 \box 7 }
\normal-text \normalsize "(time signatures)"
\override #'(font-features .("cv47")) {
  0123456789 \box 147 \concat { \box 1 \box 4 \box 7 }
\normal-text \normalsize "(alternatives)"
\override #'(font-features .("tnum" "cv47" "-kern")) {
  0123456789 \box 147 \concat { \box 1 \box 4 \box 7 }
\normal-text \normalsize "(fixed-width)"
\override #'(font-features .("tnum" "cv47" "ss01")) {
  0123456789 \box 147 \concat { \box 1 \box 4 \box 7 }
\normal-text \normalsize "(figured bass)"
\override #'(font-features .("cv47" "ss01")) {
  0123456789 \box 147 \concat { \box 1 \box 4 \box 7 }
\normal-text \normalsize "(fingering)"
}

0123456789 147 147 (time signatures)
0123456789 147 147 (alternatives)
0123456789 147 147 (fixed-width)
0123456789 147 147 (figured bass)
0123456789 147 147 (fingering)

See also the markup commands \figured-bass and \finger, which set the font features accordingly.

\overtie arg (markup)
Overtie arg.
\markup \line {
  \overtie "overtied"
  \override #'((offset . 5) (thickness . 1))
  \overtie "overtied"
  \override #'((offset . 1) (thickness . 5))
  \overtie "overtied"
}
Used properties:
- shorten-pair ((0 . 0))
- height-limit (0.7)
- direction (1)
- offset (2)
- thickness (1)

\replace replacements (list) arg (markup)
Used to automatically replace a string by another in the markup arg. Each pair of the alist replacements specifies what should be replaced. The key is the string to be replaced by the value markup. Note the quasiquoting syntax with a backquote in the second example.

\markup \replace #'(("2nd" . "Second"))
"2nd time"
\markup \replace
#'(("2nd" . #\{ \markup \concat { 2 \super nd } #}))
\center-column {
\line { Play only }
\line { the 2nd time }
}

Second time

Play only
the 2nd time

Used properties:
- replacement-alist

\roman arg (markup)
Set font family to roman.
\markup {
  \sans \bold {
    sans serif, bold
    \hspace #2
    \roman {
      text in roman font family
    }
    \hspace #2
    return to sans
  }
}

sans serif, bold  text in roman font family  return to sans

\sans arg (markup)
Switch to the sans serif font family.
\markup {
  default
  \hspace #2
}
\sans { 
  sans serif 
}

\simple { string }

A simple text string; \markup { foo } is equivalent with \markup { \simple #"foo" }.

Note: for creating standard text markup or defining new markup commands, the use of \simple is unnecessary.

\markup { 
  \simple #"simple"
  \simple #"text"
  \simple #"strings"
}

simple text strings

\small { arg (markup) }

Set font size to -1.

\markup { 
  default 
  \smallCaps #2 
  \small 
}

\smallCaps { arg (markup) }

Emit arg as small caps.

Note: \smallCaps does not support accented characters.

\markup { 
  default 
  \smallCaps #2 
  \smallCaps { 
    Text in small caps
  }
}

\smaller { arg (markup) }

Decrease the font size relative to the current setting.

\markup { 
  \fontsize #3.5 { 
    large text 
    \hspace #2 
    \smaller { smaller text } 
    \hspace #2 
    large text
  }
}
\texttt{large text smaller text large text}

\texttt{\sub arg (markup)}
Set arg in subscript.
\texttt{\markup {\concat {\texttt{H} \texttt{sub} {2} 0}}}

\texttt{H}_2\texttt{O}
Used properties:
• font-size (0)

\texttt{\super arg (markup)}
Set arg in superscript.
\texttt{\markup {E = \concat {mc \super 2}}}

\texttt{E = mc}^2
Used properties:
• font-size (0)

\texttt{\teeny arg (markup)}
Set font size to -3.
\texttt{\markup {default \hspace \#2 \teeny}}

\texttt{default teeny}

\texttt{\text arg (markup)}
Use a text font instead of music symbol or music alphabet font.
\texttt{\markup {\number {1, 2,}}}
\text { three, four, \\
5 \\
\}
\)

1, 2, three, four, 5

\tie arg (markup)
Adds a horizontal bow created with make-tie-stencil at bottom or top of arg. Looks at thickness to determine line thickness, and offset to determine y-offset. The added bow fits the extent of arg, shorten-pair may be used to modify this. direction may be set using an override or direction-modifiers or voiceOne, etc.

\markup { \\
  \override #(direction . 1) \\
  \tie "above" \\
  \override #(direction . -1) \\
  \tie "below" \\
  }

above below

Used properties:
- shorten-pair ((0 . 0))
- height-limit (0.7)
- direction (1)
- offset (2)
- thickness (1)

\tiny arg (markup)
Set font size to -2.

\markup { \\
  default \\
  \hspace #2 \\
  \tiny \\
  tiny \\
  }

default tiny

\typewriter arg (markup)
Use font-family typewriter for arg.

\markup { \\
  default \\
  \hspace #2 \\
  \typewriter \\
  typewriter \\
  }

default typewriter
\underline \text{arg} (markup)

Underline \text{arg}. Looks at thickness to determine line thickness, offset to determine line y-offset from \text{arg} and underline-skip to determine the distance of additional lines from the others. underline-shift is used to get subsequent calls correct. Overriding it makes little sense, it would end up adding the provided value to the one of offset.

\begin{verbatim}
\markup \justify-line {
  \underline "underlined"
  \override #'(offset . 5) \underline "underlined"
  \override #'(thickness . 1) \underline "underlined"
  \override #'(offset . 1) \underline "underlined"
  \override #'(thickness . 5) \underline "underlined"
  \override #'(offset . 5) \underline (#(underline-skip . 4) \underline "multiple underlined"
}
\end{verbatim}

\textbf{Used properties:}
\begin{itemize}
  \item underline-skip (2)
  \item underline-shift (0)
  \item offset (2)
  \item thickness (1)
\end{itemize}

\undertie \text{arg} (markup)

\begin{verbatim}
\markup \line {
  \undertie "undertied"
  \override '((offset . 5) (thickness . 1)) \undertie "undertied"
  \override '((offset . 1) (thickness . 5)) \undertie "undertied"
}
\end{verbatim}

\textbf{Used properties:}
\begin{itemize}
  \item shorten-pair ((0 . 0))
  \item height-limit (0.7)
  \item direction (1)
  \item offset (2)
  \item thickness (1)
\end{itemize}

\upright \text{arg} (markup)

Set font-shape to upright. This is the opposite of italic.

\begin{verbatim}
\markup {
  \italic {
    italic text
    \hspace #2
}
\end{verbatim}
Interpret the markup \( \text{arg} \) with a string transformer installed. Whenever a string is interpreted inside \( \text{arg} \), the transformer is first called, and it is the result that is interpreted. The arguments passed to the transformer are the output definition, the property list chain, and the string. See Section “New markup command definition” in Extending about the two first arguments.

\[
\text{with-string-transformer} \; \text{transformer} \; (\text{procedure}) \; \text{arg} \; (\text{markup})
\]

\[
\text{ABC}
\]

### A.12.2 Markup for text alignment

\[
\text{align-on-other} \; \text{axis} \; (\text{non-negative, exact integer}) \; \text{other-dir} \; (\text{number}) \; \text{other} \; (\text{markup}) \; \text{self-dir} \; (\text{number}) \; \text{self} \; (\text{markup})
\]

Align markup \( \text{self} \) on markup \( \text{other} \) along axis \( \text{axis} \), using \( \text{self-dir} \) and \( \text{other-dir} \) for mutual alignment of \( \text{self} \) and \( \text{other} \), respectively. This command translates \( \text{self} \) as requested relative to its surroundings; \( \text{other} \) is not printed.

\[
\text{center-align} \; \text{arg} \; (\text{markup})
\]

Align \( \text{arg} \) to its X center.
\center-column args (markup list)

Put args in a centered column.
\markup {
  \center-column {
    one
two
three
  }
}

one
two
three

Used properties:
  • baseline-skip

\column args (markup list)

Stack the markups in args vertically. The property baseline-skip determines the space between markups in args.
\markup {
  \column {
    one
two
three
  }
}

one
two
three

Used properties:
  • baseline-skip

\combine arg1 (markup) arg2 (markup)

Print two markups on top of each other.

Note: \combine cannot take a list of markups enclosed in curly braces as an argument; for this purpose use \overlay instead.
\markup {
  \fontsize #5
  \override #'(thickness . 2)
  \combine
    \draw-line #'(0 . 4)
    \arrow-head #Y #DOWN #+#f
}
\concat args (markup list)
Concatenate args in a horizontal line, without spaces in between. Strings and simple markups are concatenated on the input level, allowing ligatures. For example, \concat { "f" \simple="#" } is equivalent to "fi".

\markup {\concat {one\twothree}}

onetwothree

\dir-column args (markup list)
Make a column of args, going up or down, depending on the setting of the direction layout property.

\markup {\override #`(direction . ,UP)\dir-column {going up}\hspace #1\dir-column {going down}\hspace #1\override #'(direction . 1)\dir-column {going up}}}

up up going going going down

Used properties:
• baseline-skip
• direction

\fill-line args (markup list)
Put markups in a horizontal line of width line-width. The markups are spaced or flushed to fill the entire line. If there are no arguments, return an empty stencil.

\markup {\column {\fill-line {Words evenly spaced across the page}\null\fill-line {\line {Text markups}}\line {}}}
Appendix A: Notation manual tables

\italic { evenly spaced } \\
\line { across the page } \\
\null \override #'(line-width . 50) \\
\fill-line { \\
  Width explicitly specified \\
} \\
\}

Words evenly spaced across the page

Text markups evenly spaced across the page

Width explicitly specified

Used properties:

- `line-width (#f)`
- `word-space (0.6)`
- `text-direction (1)`

\fill-with-pattern space (number) dir (direction) pattern (markup) left (markup) right (markup)

Put `left` and `right` in a horizontal line of width `line-width` with a line of markups `pattern` in between. Patterns are spaced apart by `space`. Patterns are aligned to the `dir` markup.

\markup \column {
  "right-aligned :"
  \fill-with-pattern #1 #RIGHT . first right
  \fill-with-pattern #1 #RIGHT . second right
  \null
  "center-aligned :"
  \fill-with-pattern #1.5 #CENTER - left right
  \null
  "left-aligned :"
  \override #'(line-width . 50)
  \fill-with-pattern #2 #LEFT : left first
  \override #'(line-width . 50)
  \fill-with-pattern #2 #LEFT : left second
}
right-aligned:
first .................................................. right
second ................................................ right

center-aligned:
left: ........................................ right

left-aligned:
left: ........................................ first
left: ........................................ second

Used properties:

- line-width
- word-space

\general-align axis (integer) dir (number) arg (markup)
Align arg in axis direction to the dir side.

\markup {
\column {
  one
  \general-align #X #LEFT
  two
  three
  \null
  one
  \general-align #X #CENTER
  two
  three
  \null
  \line {
    one
    \general-align #Y #UP
    two
    three
  }
  \null
  \line {
    one
    \general-align #Y #3.2
    two
    three
  }
}
}
\texttt{\textbackslash halign \textit{dir} (number) \textit{arg} (markup)}

Set horizontal alignment. If \textit{dir} is $-1$, then it is left-aligned, while $+1$ is right. Values in between interpolate alignment accordingly.

\texttt{\textbackslash markup \{\column \{\begin{align*}
one 
two 
three 

one 
two 
three 

one 
two 
three 

one 
two 
three 

one 
two 
three 

null 

one 
\texttt{\textbackslash halign \#LEFT} 
two 
\texttt{\textbackslash null} 
one 
\texttt{\textbackslash halign \#CENTER} 
two 
\texttt{\textbackslash null} 
one 
\texttt{\textbackslash halign \#RIGHT} 
two 
\texttt{\textbackslash null} 
one 
\texttt{\textbackslash halign \#-5} 
two 
\texttt{\textbackslash null} 
one 
\end{align*}\}}
\hceter-in length (number) arg (markup)
Center arg horizontally within a box of extending $length/2$ to the left and right.

\new StaffGroup <<
\new Staff {
  \set Staff.instrumentName = \markup {
    \hceter-in #12
    Oboe
  }
  c''1
}
\new Staff {
  \set Staff.instrumentName = \markup {
    \hceter-in #12
    Bassoon
  }
  \clef tenor
  c'1
}
>>

\hspace amount (number)
Create an invisible object taking up horizontal space $amount$.

\markup {
  one
  \hspace #2
  two
  \hspace #8
three
}

\justify args (markup list)
Like \wordwrap, but with lines stretched to justify the margins. Use \override
#'(line-width . X) to set the line width; X is the number of staff spaces.
\markup {
  \justify {
    Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod
tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam,
quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.
  }
}

Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod
tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam,
quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.

Used properties:
• text-direction (1)
• word-space
• line-width (#f)
• baseline-skip

\justify-field symbol (symbol)
Justify the data which has been assigned to symbol.
\header {
  title = "My title"
  myText = "Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod
tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam,
quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat."
}

\paper {
  bookTitleMarkup = \markup {
    \column {
      \fill-line { \fromproperty #'header:title }
      \null
      \justify-field #'header:myText
    }
  }
}

\markup {
  \null
Appendix A: Notation manual tables

My title

Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.

\justify-line args (markup list)
Put markups in a horizontal line of width line-width. The markups are spread to fill the entire line and separated by equal space. If there are no arguments, return an empty stencil.

\markup {
    \justify-line {
        Constant space between neighboring words
    }
}

\justify-string arg (string)
Justify a string. Paragraphs may be separated with double newlines

\markup {
    \override #'(line-width . 40)
    \justify-string "Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.
    Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.
    Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum"
Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.
Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.
Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum

Used properties:
• text-direction (1)
• word-space
• line-width
• baseline-skip

\left-align \arg \space (markup)
Align $\arg$ on its left edge.
\begin{verbatim}
\markup {
  \column {
    one
    \left-align
    two
    three
  }
}
one
two
three
\end{verbatim}

\left-column \args \space (markup list)
Put \args in a left-aligned column.
\begin{verbatim}
\markup {
  \left-column {
    one
    two
    three
  }
}
one
two
three
\end{verbatim}

Used properties:
• baseline-skip

\line \args \space (markup list)
Put \args in a horizontal line. The property word-space determines the space between markups in \args.
\begin{verbatim}
\markup {
\end{verbatim}
\line { 
  one two three 
} 

one two three

Used properties:
• text-direction (1)
• word-space

\lower amount (number) arg (markup)
Lower arg by the distance amount. A negative amount indicates raising; see also \raise.

\markup { 
  one 
  \lower #3 
  two 
  three 
} 

one three
two

\overlay args (markup list)
Takes a list of markups combining them.

\markup { 
  \fontsize #5 
  \override #'(thickness . 2) 
  \overlay { 
    \draw-line #'(0 . 4) 
    \arrow-head #Y #DOWN ##f 
    \translate #'(0 . 4) \arrow-head #Y #UP ##f 
  } 
} 

\pad amount (number) arg (markup)
Add space around a markup object. Identical to pad-around.

\markup { 
  \box { 
    default 
  } 
  \hspace #2 
  \box { 
    \pad-markup #1 { 
      padded 
    } 
  } 
} 

[default] padded
\pad-around amount (number) arg (markup)
Add padding amount all around arg.

\markup {
  \box {
    \default
  }
  \hspace #2
  \box {
    \pad-around #0.5 {
      \padded
    }
  }
}

\default \padded

\pad-to-box x-ext (pair of numbers) y-ext (pair of numbers) arg (markup)
Make arg take at least x-ext, y-ext space.

\markup {
  \box {
    \default
  }
  \hspace #4
  \box {
    \pad-to-box #'(0 . 10) #'(0 . 3) {
      \padded
    }
  }
}

\default \padded

\pad-x amount (number) arg (markup)
Add padding amount around arg in the X direction.

\markup {
  \box {
    \default
  }
  \hspace #4
  \box {
    \pad-x #2 {
      \padded
    }
  }
}

\default \padded

\put-adjacent axis (integer) dir (direction) arg1 (markup) arg2 (markup)
Put arg2 next to arg1, without moving arg1.
\raise amount (number) \textit{arg} (markup)

Raise \textit{arg} by the distance \textit{amount}. A negative \textit{amount} indicates lowering, see also \lower.

The argument to \raise is the vertical displacement amount, measured in (global) staff spaces. \raise and \super raise objects in relation to their surrounding markups.

If the text object itself is positioned above or below the staff, then \raise cannot be used to move it, since the mechanism that positions it next to the staff cancels any shift made with \raise. For vertical positioning, use the \texttt{padding} and/or extra-offset properties.

\begin{verbatim}
\markup { C \small \bold \raise #1.0 9/7+ }
\end{verbatim}

C 9/7+

\right-align arg (markup)

Align \textit{arg} on its right edge.

\begin{verbatim}
\markup { \column { one \right-align \textbf{two} \textit{three} } } one two three
\end{verbatim}

\right-column args (markup list)

Put \textit{args} in a right-aligned column.

\begin{verbatim}
\markup { \right-column { one \textbf{two} \textit{three} } } one two three
\end{verbatim}

Used properties:

- baseline-skip
\rotate \textit{ang} (number) \textit{arg} (markup)

Rotate object with \textit{ang} degrees around its center.

\begin{verbatim}
\markup {
  default
  \hspace #2
  \rotate #45
  \line {
    \hspace #2
    \rotate #45
  }
}
\end{verbatim}

default rotated 45°

\translate \textit{offset} (pair of numbers) \textit{arg} (markup)

Translate \textit{arg} relative to its surroundings. \textit{offset} is a pair of numbers representing the displacement in the X and Y axis.

\begin{verbatim}
\markup {
  \hspace #2
  \translate #'(2 . 3)
  \line {
    translated two spaces right, three up
  }
}
\end{verbatim}

translated two spaces right, three up

\translate-scaled \textit{offset} (pair of numbers) \textit{arg} (markup)

Translate \textit{arg} by \textit{offset}, scaling the offset by the font-size.

\begin{verbatim}
\markup {
  \fontsize #5 {
    \hspace #2
    \translate #'(2 . 3) translate
    \hspace #2
    \translate-scaled #'(2 . 3) translate-scaled
  }
}
\end{verbatim}

\begin{verbatim}
translate translate-scaled
\end{verbatim}

* translate *

Used properties:
  * font-size (0)

\vcenter \textit{arg} (markup)

Align \textit{arg} to its Y center.

\begin{verbatim}
\markup {
  \hspace #2
  \vcenter one
  \hspace #2
  \vcenter two
  \vspace #2
  \vcenter three
}
\end{verbatim}

one two three
Appendix A: Notation manual tables

\vspace amount (number)

Create an invisible object taking up vertical space of amount multiplied by 3.

\markup {
  \center-column {
    one \vspace #2
    two \vspace #5
    three
  }
}

\markup {
  \wordwrap {
    Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.
  }
}

\markup {
  \wordwrap {
    Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.
  }
}

Lorem ipsum dolor sit amet, consectetur adipisicing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.

Used properties:
- text-direction (1)
- word-space
- line-width (#f)
- baseline-skip

\wordwrap-field symbol (symbol)

Wordwrap the data which has been assigned to symbol.

\header {
  title = "My title"
myText = "Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat."

\paper {
  bookTitleMarkup = \markup {
    \column {
      \fill-line { \fromproperty #'header:title } \null
      \wordwrap-field #'header:myText
    }
  }
}
\markup { \null }

My title

Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.

\wordwrap-string arg (string)
Wordwrap a string. Paragraphs may be separated with double newlines.
\markup {
  \override #{'line-width . 40}
  \wordwrap-string #$"Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua.

Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat.

Excepcetor sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum"
}
Lorem ipsum dolor sit amet, consectetur adipiscing elit, sed do eiusmod tempor incididunt ut labore et dolore magna aliqua. Ut enim ad minim veniam, quis nostrud exercitation ullamco laboris nisi ut aliquip ex ea commodo consequat. Excepteur sint occaecat cupidatat non proident, sunt in culpa qui officia deserunt mollit anim id est laborum

Used properties:
- text-direction (1)
- word-space
- line-width
- baseline-skip

### A.12.3 Graphical markup

\arrow-head axis (integer) dir (direction) filled (boolean)

Produce an arrow head in specified direction and axis. Use the filled head if filled is specified.

\markup {
  \fontsize #5 {
      \general-align #Y #DOWN {
          \arrow-head #Y #UP ##t
          \arrow-head #Y #DOWN ##f
          \hspace #2
          \arrow-head #X #RIGHT ##f
          \arrow-head #X #LEFT ##f
      }
  }
}

\beam width (number) slope (number) thickness (number)

Create a beam with the specified parameters.

\markup {
  \beam #5 #1 #2
}

\bracket arg (markup)

Draw vertical brackets around arg.

\markup {
  \bracket {
      \note {2.} #UP
  }
}
\circle arg (markup)
Draw a circle around arg. Use thickness, circle-padding and font-size properties to determine line thickness and padding around the markup.

\markup {
  \circle {
    Hi
  }
}

\Hi

Used properties:
- circle-padding (0.2)
- font-size (0)
- thickness (1)

\draw-circle radius (number) thickness (number) filled (boolean)
A circle of radius radius and thickness thickness, optionally filled.

\markup {
  \draw-circle #2 #0.5 ##f
  \hspace #2
  \draw-circle #2 #0 ##t
}

\draw-dashed-line dest (pair of numbers)
A dashed line.
If full-length is set to #t (default) the dashed-line extends to the whole length given by dest, without white space at beginning or end. off will then be altered to fit. To insist on the given (or default) values of on, off use `\override #'(full-length . #f) Manual settings for on, off and phase are possible.

\markup {
  \draw-dashed-line '#(5.1 . 2.3)
  \override '#((on . 0.3) (off . 0.5))
  \draw-dashed-line '#(5.1 . 2.3)
}

Used properties:
- full-length (#t)
- phase (0)
- off (1)
- on (1)
- thickness (1)

`\draw-dotted-line dest` (pair of numbers)

A dotted line.

The dotted-line always extends to the whole length given by `dest`, without white space at beginning or end. Manual settings for `off` are possible to get larger or smaller space between the dots. The given (or default) value of `off` will be altered to fit the line-length.

\begin{verbatim}
\markup {
  \draw-dotted-line #'(5.1 . 2.3)
  \override #'((thickness . 2) (off . 0.2))
  \draw-dotted-line #'(5.1 . 2.3)
}
\end{verbatim}

Used properties:
- phase (0)
- off (1)
- thickness (1)

`\draw-hline`

Draws a line across a page, where the property `span-factor` controls what fraction of the page is taken up.

\begin{verbatim}
\markup {
  \column {
    \draw-hline
    \override #'((span-factor . 1/3))
    \draw-hline
  }
}
\end{verbatim}

Used properties:
- span-factor (1)
- line-width
- draw-line-markup

`\draw-line dest` (pair of numbers)

A simple line.

\begin{verbatim}
\markup {
  \draw-line #'(4 . 4)
  \override #'((thickness . 5))
  \draw-line #'(-3 . 0)
}
\end{verbatim}

Used properties:
- thickness (1)
\draw-squiggle-line \textit{sq-length} \textit{(number)} \textit{dest} \textit{(pair of numbers)} \textit{eq-end?} \textit{(boolean)}

A squiggled line.

If \textit{eq-end?} is set to \#t, it is ensured the squiggled line ends with a bow in same direction as the starting one. \textit{sq-length} is the length of the first bow. \textit{dest} is the end point of the squiggled line. To match \textit{dest} the squiggled line is scaled accordingly. Its appearance may be customized by overrides for thickness, angularity, height and orientation.

\markup
\column{
\draw-squiggle-line #0.5 #'(6 . 0) ##t
\override #'(orientation . -1)
\draw-squiggle-line #0.5 #'(6 . 0) ##t
\draw-squiggle-line #0.5 #'(6 . 0) ##f
\override #'(height . 1)
\draw-squiggle-line #0.5 #'(6 . 0) ##t
\override #'(thickness . 5)
\draw-squiggle-line #0.5 #'(6 . 0) ##t
\override #'(angularity . 2)
\draw-squiggle-line #0.5 #'(6 . 0) ##t
}

Used properties:
- orientation (1)
- height (0.5)
- angularity (0)
- thickness (0.5)

\ellipse \textit{arg} \textit{(markup)}

Draw an ellipse around \textit{arg}. Use thickness, \textit{x-padding}, \textit{y-padding} and \textit{font-size} properties to determine line thickness and padding around the markup.

\markup {
\ellipse {
\Hi
}
}

\Hi

Used properties:
- \textit{y-padding} (0.2)
- \textit{x-padding} (0.2)
- \textit{font-size} (0)
- \textit{thickness} (1)
\epsfile \texttt{axis} \texttt{(number)} \texttt{size} \texttt{(number)} \texttt{file-name} \texttt{(string)}

Inline an EPS image. The image is scaled along \texttt{axis} to \texttt{size}.

\texttt{\textbackslash markup \{ \textbackslash general-align \#Y \#DOWN \{ \textbackslash epsfile \#X \#20 \#"context-example.eps" \textbackslash epsfile \#Y \#20 \#"context-example.eps" \} \} }

\texttt{\textbackslash filled-box \texttt{xext} \texttt{(pair of numbers)} \texttt{yext} \texttt{(pair of numbers)} \texttt{blot} \texttt{(number)}}

Draw a box with rounded corners of dimensions \texttt{xext} and \texttt{yext}. For example, \texttt{\textbackslash filled-box \#'(\texttt{-}0.3 \texttt{ .} \texttt{1.8}) \#'(\texttt{-}0.3 \texttt{ .} \texttt{1.8}) \#0} creates a box extending horizontally from \texttt{-0.3} to \texttt{1.8} and vertically from \texttt{-0.3} up to \texttt{1.8}, with corners formed from a circle of diameter \texttt{0} (i.e., sharp corners).

\texttt{\textbackslash markup \{ \textbackslash filled-box \#'(\texttt{0 \texttt{ .} \texttt{4}) \#'(\texttt{0 \texttt{ .} \texttt{4}) \#0 \textbackslash filled-box \#'(\texttt{0 \texttt{ .} \texttt{2}) \#'(\texttt{-}\texttt{4 \texttt{ .} \texttt{2}) \#0.4 \textbackslash combine \textbackslash filled-box \#'(\texttt{1 \texttt{ .} \texttt{8}) \#'(\texttt{0 \texttt{ .} \texttt{7}) \#0.2 \textbackslash with-color \#white \textbackslash filled-box \#'(\texttt{3.6 \texttt{ .} \texttt{5.6}) \#'(\texttt{3.5 \texttt{ .} \texttt{5.5}) \#0.7 \} }

\texttt{\textbackslash hbracket \texttt{arg} \texttt{(markup)}}

Draw horizontal brackets around \texttt{arg}.

\texttt{\textbackslash markup \{ \textbackslash hbracket \{ \textbackslash line \{ \textbackslash one \textbackslash two \textbackslash three \} \} \} }

\texttt{\textbackslash oval \texttt{arg} \texttt{(markup)}}

Draw an oval around \texttt{arg}. Use \texttt{thickness}, \texttt{x-padding}, \texttt{y-padding} and \texttt{font-size} properties to determine line thickness and padding around the markup.

\texttt{\textbackslash markup \{ }

\texttt{one two three}
\oval { 
  Hi 
} 

\oval 

Hi

Used properties:
- y-padding (0.75)
- x-padding (0.75)
- font-size (0)
- thickness (1)

\parenthesize arg (markup)

Draw parentheses around arg. This is useful for parenthesizing a column containing several lines of text.

\markup {
  \parenthesize
  \column {
    foo
    bar
  }
  \override #'(angularity . 2)
  \parenthesize
  \column {
    bah
    baz
  }
}

\parenthesize arg 

Draw parentheses around arg. This is useful for parenthesizing a column containing several lines of text.

\markup {
  \parenthesize
  \column {
    foo
    bar
  }
  \override #'(angularity . 2)
  \parenthesize
  \column {
    bah
    baz
  }
}

[foo] [bah]
[bar] [baz]

Used properties:
- width (0.25)
- line-thickness (0.1)
- thickness (1)
- size (1)
- padding
- angularity (0)

\path thickness (number) commands (list)

Draws a path with line thickness according to the directions given in commands. commands is a list of lists where the car of each sublist is a drawing command and the cdr comprises the associated arguments for each command.

There are seven commands available to use in the list commands: moveto, rmoveto, lineto, rlineto, curveto, rcurveto, and closepath. Note that the commands that begin with r are the relative variants of the other three commands. You may also use the standard SVG single-letter equivalents: moveto = M, lineto = L, curveto = C, closepath = Z. The relative commands are written lowercase: rmoveto = r, rlineto = l, rcurveto = c.
The commands \texttt{moveto}, \texttt{rmoveto}, \texttt{lineto}, and \texttt{rlineto} take 2 arguments; they are the X and Y coordinates for the destination point.

The commands \texttt{curveto} and \texttt{rcurveto} create cubic Bézier curves, and take 6 arguments; the first two are the X and Y coordinates for the first control point, the second two are the X and Y coordinates for the second control point, and the last two are the X and Y coordinates for the destination point.

The \texttt{closepath} command takes zero arguments and closes the current subpath in the active path.

Line-cap styles and line-join styles may be customized by overriding the \texttt{line-cap-style} and \texttt{line-join-style} properties, respectively. Available line-cap styles are \texttt{'butt}, \texttt{'round}, and \texttt{'square}. Available line-join styles are \texttt{'miter}, \texttt{'round}, and \texttt{'bevel}.

The property \texttt{filled} specifies whether or not the path is filled with color.

```latex
\begin{verbatim}
samplePath = '#((lineto -1 1)
   (lineto 1 1)
   (lineto 1 -1)
   (curveto -5 -5 -5 5 -1 0)
   (closepath))
\end{verbatim}
```

Used properties:

- \texttt{filled} (#f)
- \texttt{line-join-style} (round)
- \texttt{line-cap-style} (round)

A polygon delimited by the list of points. \texttt{extroversion} defines how the shape of the polygon is adapted to its thickness. If it is 0, the polygon is traced as-is. If -1, the outer side of the line is just on the given points. If 1, the line has its inner side on the points. The \texttt{thickness} property controls the thickness of the line; for filled polygons, this means the diameter of the blot.

```latex
\begin{verbatim}
regularPentagon = '#((1 . 0) (0.31 . 0.95) (-0.81 . 0.59)
   (-0.81 . -0.59) (0.31 . -0.95))
\end{verbatim}
```

```latex
\begin{verbatim}
\markup {
  \path #0.25 #samplePath
  \override #(line-join-style . miter)
  \path #0.25 #samplePath
  \override #(filled . #t)
  \path #0.25 #samplePath
}
```

A polygon delimited by the list of points. \texttt{extroversion} defines how the shape of the polygon is adapted to its thickness. If it is 0, the polygon is traced as-is. If -1, the outer side of the line is just on the given points. If 1, the line has its inner side on the points. The \texttt{thickness} property controls the thickness of the line; for filled polygons, this means the diameter of the blot.

```latex
\begin{verbatim}
regularPentagon = '#((1 . 0) (0.31 . 0.95) (-0.81 . 0.59)
   (-0.81 . -0.59) (0.31 . -0.95))
\end{verbatim}
```

```latex
\begin{verbatim}
\markup {
  \polygon #((-1 . -1) (0 . -3) (2 . 2) (1 . 2))
  \override #(filled . #f)
  \override #(thickness . 2)
}
```
\combine
\with-color #(universal-color 'blue)
\polygon #regular Pentagon
\with-color #(universal-color 'vermillion)
\override #'(extroversion . 1)
\polygon #regular Pentagon

Used properties:

- thickness (1)
- filled (#t)
- extroversion (0)

\postscript str (string)
Insert str directly into the output as a PostScript command string.
This command is meant as a last resort. Almost all needs are better fulfilled by other markup commands (see, for example, \path and \draw-line). If you do use this command, keep the following points in mind:

- \postscript does not work in SVG output.
- There are no stability guarantees on the details of how LilyPond produces its own output (i.e., the context into which the PostScript code is inserted). They may change substantially across versions.
- LilyPond cannot understand the shape of the drawing, leading to suboptimal spacing.
- Depending on how you install LilyPond, the version of the PostScript interpreter (GhostScript) can vary, and some of its features may be disabled.

\begin{verbatim}
ringsps = "
0.15 setlinewidth
0.9 0.6 moveto
0.4 0.6 0.5 0 361 arc
stroke
1.0 0.6 0.5 0 361 arc
stroke"

rings = \markup {
  \with-dimensions #'(0.2 . 1.6) #'(0 . 1.2)
  \postscript #ringsps
}
\end{verbatim}

\relative c' {c2\rings a2_\rings}

\begin{music}
\end{music}
\rounded-box arg (markup)
Draw a box with rounded corners around arg. Looks at thickness, box-padding and font-size properties to determine line thickness and padding around the markup; the corner-radius property makes it possible to define another shape for the corners (default is 1).

```
c4\markup { 
  \rounded-box { 
    Overtura 
  } 
}
c,8. c16 c4 r
```

Used properties:
- box-padding (0.5)
- font-size (0)
- corner-radius (1)
- thickness (1)

\scale factor-pair (pair of numbers) arg (markup)
Scale arg. factor-pair is a pair of numbers representing the scaling-factor in the X and Y axes. Negative values may be used to produce mirror images.

```
\markup { 
  \line { 
    \scale #'(2 . 1) 
    stretched 
    \scale #'(1 . -1) 
    mirrored 
  } 
}
```

\triangle filled (boolean)
A triangle, either filled or empty.

```
\markup { 
  \triangle ##t 
  \hspace #2 
  \triangle ##f 
}
```

\triangle

Used properties:
- thickness (1)
- font-size (0)
- extroversion (0)
with-url url (string) arg (markup)
    Add a link to URL url around arg. This only works in the PDF backend.
    \markup {
      \with-url #"https://lilypond.org/" {
        LilyPond ... italic {
          music notation for everyone
        }
      }
    }

    LilyPond ... music notation for everyone

A.12.4 Markup for music and musical symbols

\accidental alteration (an exact rational number)
    Select an accidental glyph from an alteration, given as rational number.
    \markup \accidental #1/2

    #

    Used properties:
    • alteration-glyph-name-alist

\coda Draw a coda sign.
    \markup {
      \coda
    }

\compound-meter time-sig (number or pair)
    Draw a numeric time signature.
    \markup {
      \column {
        \line { Single number: }
          \compound-meter #3 }
        \line { Conventional: }
          \compound-meter #'(4 . 4) or
          \compound-meter #'(4 4) }
        \line { Compound: }
          \compound-meter #'(2 3 8) }
        \line { Single-number compound: }
          \compound-meter #'((2) (3)) }
        \line { Complex compound: }
          \compound-meter #'((2 3 8) (3 4)) }
      }
    }

    Single number: \\textbf{3}
    Conventional: \\textbf{4} \textbf{or} \\textbf{4}
    Compound: \\textbf{2} \+ \textbf{3}
    Single-number compound: \\textbf{2} \+ \textbf{3}
    Complex compound: \\textbf{2} \+ \textbf{3} \+ \textbf{3}
\customTabClef \textit{num-strings} (integer) \textit{staff-space} (number)

Draw a tab clef sans-serif style.

\doubleflat

Draw a double flat symbol.
\begin{verbatim}
\markup {
  \doubleflat
}
\end{verbatim}

\doubleslash

Draw a double sharp symbol.
\begin{verbatim}
\markup {
  \doubleslash
}
\end{verbatim}

\fermata

Create a fermata glyph. When \textit{direction} is \textsc{down}, use an inverted glyph. Note that within music, one would usually use the \textit{fermata} articulation instead of a markup.
\begin{verbatim}
\markup {
  \fermata
  \override #`(direction . \textsc{down}) \fermata
}
\end{verbatim}

\flat

Draw a flat symbol.
\begin{verbatim}
\markup {
  \flat
}
\end{verbatim}

\multi-measure-rest-by-number \textit{duration-scale} (non-negative, exact integer)

Returns a multi-measure rest symbol.

If the number of measures is greater than the number given by \textit{expand-limit} a horizontal line is printed. For every multi-measure rest lasting more than one measure a number is printed on top.
\begin{verbatim}
\markup {
  Multi-measure rests may look like
  \multi-measure-rest-by-number #12
  or
  \multi-measure-rest-by-number #7
  (church rests)
}\end{verbatim}
Multi-measure rests may look like $\frac{12}{\text{rests.2}}$ or $\frac{7}{\text{rests.0}}$ (church rests)

Used properties:
- multi-measure-rest-number (#t)
- width (8)
- expand-limit (10)
- hair-thickness (2.0)
- thick-thickness (6.6)
- word-space
- style ()
- font-size (0)

\musicglyph \text{glyph-name} (string)

\text{glyph-name} is converted to a musical symbol; for example, \musicglyph \\
#"accidentals.natural" selects the natural sign from the music font. See Section

“The Emmentaler font” in Notation Reference for a complete listing of the possible

glyphs.

\markup {
  \musicglyph #"f"
  \musicglyph #"rests.2"
  \musicglyph #"clefs.G_change"
}

\natural Draw a natural symbol.

\markup {
  \natural
}

\note \text{duration} (duration) \text{dir} (number)

This produces a note with a stem pointing in \text{dir} direction, with the \text{duration} for the
note head type and augmentation dots. For example, \note {4.} #-0.75 creates a

dotted quarter note, with a shortened down stem.

\markup {
  \override #'(style . cross)
  \note {4.} #UP
  \hspace #2
  \note {\breve} #0
}

\natural

Used properties:
- style ()
Appendix A: Notation manual tables

- dots-direction (0)
- flag-style ()
- font-size (0)

\note-by-number log (number) dot-count (number) dir (number)
Construct a note symbol, with stem and flag. By using fractional values for dir, longer or shorter stems can be obtained. Supports all note-head-styles. Ancient note-head-styles will get mensural-style-flags. flag-style may be overridden independently. Supported flag-styles are default, old-straight-flag, modern-straight-flag, flat-flag, mensural and neomensural. The latter two flag-styles will both result in mensural-flags. Both are supplied for convenience.

\markup {
\note-by-number #3 #0 #DOWN
\hspace #2
\note-by-number #1 #2 #0.8
}

Used properties:
- style ()
- dots-direction (0)
- flag-style ()
- font-size (0)

\rest duration (duration)
Returns a rest symbol.
If multi-measure-rest is set to true, a multi-measure rest symbol may be returned. In this case the duration needs to be entered as { 1*2 } to get a multi-measure rest for two bars. Actually, it’s only the scaling factor that determines the length, the basic duration is disregarded.

\markup {
\rests:
\hspace #2
\rest { 4.. }
\hspace #2
\rest { \breve }
\hspace #2
Multi-measure rests:
\overline #'(multi-measure-rest . #t)
{
\hspace #2
\overline #'(multi-measure-rest-number . #f)
\rest { 1*7 }
\hspace #2
\rest { 1*12 }
}
}

Rests: \hspace #2 Rests: \hspace #2 Multi-measure rests: \hspace #2
Used properties:
- multi-measure-rest-number (#t)
- width (8)
- expand-limit (10)
- hair-thickness (2.0)
- thick-thickness (6.6)
- word-space
- style (0)
- font-size (0)
- style (0)
- ledger ((-1 0 1))
- font-size (0)

\rest-by-number log (integer) dot-count (integer)
A rest symbol.
For duration logs specified with property ledger, rest symbols with ledger lines are selected.

\markup
\rest-by-number #3 #2
\hspace #2
\rest-by-number #0 #1

\relative
\tempo \markup {Swing
\hspace #0.4
\rhythm { 8[ 8 ]} = \rhythm { \tuplet 3/2 { 4 8 } }
}
b8 g’ c, d ees d16 ees d c r8

Within \rhythm, there is no time signature and no division in measures (as with \cadenzaOn, see [Unmetered music], page 81). Beaming must be added explicitly with the syntax explained in [Manual beams], page 102.

\markup {
The rhythmic pattern \rhythm { 16[ 8 16 ] } is a type of syncopation.

The rhythmic pattern \rhythm { 8 16 } is a type of syncopation. \stemDown can be used to flip the stems.

\markup \rhythm { \stemDown 8 16 8 } \n
\rhythm works by creating a StandaloneRhythmVoice context. The parents of this context are StandaloneRhythmStaff and StandaloneRhythmScore. It is possible to apply global tweaks to the output by using a \layout block.

\layout {
  \context {
    \StandaloneRhythmVoice
    \xNotesOn
  }
}

\markup \rhythm { 8 16 8 } \n
Used properties:
• font-size (-2)

\score score (score)
Inline an image of music. The reference point (usually the middle staff line) of the lowest staff in the top system is placed on the baseline.

\markup {
  \score {
    \new PianoStaff <<
      \new Staff \relative c' {
        \key f \major
        \time 3/4
        \mark \markup { Allegro }
        f2\p( a4)
        c2( a4)
        bes2( g'4)
        f8( e) e4 r
      }
    \new Staff \relative c {
      \clef bass
      \key f \major
      \time 3/4
      f8( a c a c a
        f c' es c es c)
      f,( bes d bes d bes)
      f( g bes g bes g)
    }
  }
}
\layout {
    indent = 0.0\cm
\context {
    \Score
    \override RehearsalMark.break-align-symbols = #'(time-signature key-signature)
    \override RehearsalMark.self-alignment-X = #LEFT
}
\context {
    \Staff
    \override TimeSignature
        .break-align-anchor-alignment = #LEFT
}
}

Allegro

Used properties:
- baseline-skip

\segno Draw a segno symbol.
\markup {
    \segno
}
%

\semiflat Draw a semiflat symbol.
\markup {
    \semiflat
}
\

\semisharp Draw a semisharp symbol.
\markup {
    \semisharp
}
%

\sesquiflat Draw a 3/2 flat symbol.
\markup {

\sesquiflat  
\sesquisharp
Draw a 3/2 sharp symbol.
\markup { \sesquisharp }

\sharp
Draw a sharp symbol.
\markup { \sharp }

\tied-lyric str (string)  
Like simple-markup, but use tie characters for ‘~’ tilde symbols.
\markup \column { \tied-lyric
  #"Siam navi all'onde algenti Lasciate in abbandono"
  \tied-lyric
  #"Impetuosi venti I nostri affetti sono"
  \tied-lyric
  #"Ogni diletto e scoglio Tutta la vita e un mar."
}

Siam navi\textunderscore all'onde\textunderscore algenti Lasciate\textunderscore in\textunderscore abbandono
Impetuosi\textunderscore venti\textunderscore I\textunderscore nostri\textunderscore affetti\textunderscore sono
Ogni\textunderscore diletto\textunderscore e\textunderscore scoglio\textunderscore Tutta\textunderscore la\textunderscore vita\textunderscore e\textunderscore un\textunderscore mar.

Used properties:
• word-space

\varcoda
Draw a varcoda sign.
\markup { \varcoda }

A.12.5 Conditional markup
\if condition? (procedure) argument (markup)
Test condition, and only insert argument if it is true. The condition is provided as a procedure taking an output definition and a property alist chain. The procedure is applied, and its result determines whether to print the markup. This command is most useful inside oddHeaderMarkup or similar. Here is an example printing page numbers in bold:
\paper {
\begin{verbatim}
oddHeaderMarkup =
\markup \fill-line {
  ""
  \if #print-page-number
    \bold \fromproperty #'page:page-number-string
  
  evenHeaderMarkup =
  \markup \fill-line {
    \if #print-page-number
      \bold \fromproperty #'page:page-number-string
    ""
  }
}
\unless condition? (procedure) argument (markup)
  Similar to \if, printing the argument if the condition is false.

The following example shows how to print the copyright notice on all pages but the
last instead of just the first page.

\paper {
  oddFooterMarkup = \markup {
    \unless #on-last-page-of-part \fill-line {
      \fromproperty #'header:copyright
    }
  }
}
\header {
  copyright = "© LilyPond Authors. License: GFDL."
  tagline = "© LilyPond Authors. Documentation placed
under the GNU Free Documentation License
version 1.3."
}
\end{verbatim}

\subsection{A.12.6 Instrument-specific markup}

\begin{verbatim}
\fret-diagram definition-string (string)
  Make a (guitar) fret diagram. For example, say

  \markup \fret-diagram #'"s:0.75;6-x;5-x;4-o;3-2;2-3;1-2;"

  for fret spacing 3/4 of staff space, D chord diagram

Syntax rules for \texttt{definition-string}:
- Diagram items are separated by semicolons.
- Possible items:
  - \texttt{s:number} – Set the fret spacing of the diagram (in staff spaces). Default: 1.
  - \texttt{t:number} – Set the line thickness (relative to normal line thickness). De-
  - \texttt{f:number} – Set fingering label type (0 = none, 1 = in circle on string, 2 =
  - \texttt{d:number} – Set radius of dot, in terms of fret spacing. Default: 0.25.
\end{verbatim}
• p: number – Set the position of the dot in the fret space. 0.5 is centered; 1 is on lower fret bar, 0 is on upper fret bar. Default: 0.6.
• c: string1–string2–fret – Include a barre mark from string1 to string2 on fret.
• string–fret – Place a dot on string at fret. If fret is ‘o’, string is identified as open. If fret is ‘x’, string is identified as muted.
• string–fret–fingering – Place a dot on string at fret, and label with fingering as defined by the f: code.
  – Note: There is no limit to the number of fret indications per string.

Used properties:
• thickness (0.5)
• fret-diagram-details
• size (1.0)
• align-dir (-0.4)

\fret-diagram-terse definition-string (string)
Make a fret diagram markup using terse string-based syntax.
Here is an example
\markup \fret-diagram-terse "}x;x;o;2;3;2;"
for a D chord diagram.

Syntax rules for definition-string:
• Strings are terminated by semicolons; the number of semicolons is the number of strings in the diagram.
• Mute strings are indicated by ‘x’.
• Open strings are indicated by ‘o’.
• A number indicates a fret indication at that fret.
• If there are multiple fret indicators desired on a string, they should be separated by spaces.
• Fingerings are given by following the fret number with a -, followed by the finger indicator, e.g. ‘3-2’ for playing the third fret with the second finger.
• Where a barre indicator is desired, follow the fret (or fingering) symbol with ( to start a barre and ) to end the barre.

Used properties:
• thickness (0.5)
• fret-diagram-details
• size (1.0)
• align-dir (-0.4)

\fret-diagram-verbose marking-list (pair)
Make a fret diagram containing the symbols indicated in marking-list.
For example,
\markup \fret-diagram-verbose
#'( (mute 6) (mute 5) (open 4)
  (place-fret 3 2) (place-fret 2 3) (place-fret 1 2))
produces a standard D chord diagram without fingering indications.
Possible elements in *marking-list*:

(mute string-number)
Place a small ‘x’ at the top of string *string-number*.

(open string-number)
Place a small ‘o’ at the top of string *string-number*.

(barre start-string end-string fret-number)
Place a barre indicator (much like a tie) from string *start-string* to string *end-string* at fret *fret-number*.

(capo fret-number)
Place a capo indicator (a large solid bar) across the entire fretboard at fret location *fret-number*. Also, set fret *fret-number* to be the lowest fret on the fret diagram.

(place-fret string-number fret-number [finger-value] [color-modifier] [color] ['parenthesized ['default-paren-color]])
Place a fret playing indication on string *string-number* at fret *fret-number* with an optional fingering label *finger-value*, an optional color modifier *color-modifier*, an optional color *color*, an optional parenthesis 'parenthesized and an optional paranthesis color 'default-paren-color'. By default, the fret playing indicator is a solid dot. This can be globally changed by setting the value of the variable *dot-color* or for a single dot by setting the value of *color*. The dot can be parenthesized by adding 'parenthesized. By default the color for the parenthesis is taken from the dot. Adding 'default-paren-color will take the parenthesis-color from the global *dot-color*, as a fall-back black will be used. Setting *color-modifier* to inverted inverts the dot color for a specific fingering. The values for *string-number*, *fret-number*, and the optional *finger* should be entered first in that order. The order of the other optional arguments does not matter. If the *finger* part of the place-fret element is present, *finger-value* will be displayed according to the setting of the variable *finger-code*. There is no limit to the number of fret indications per string.

Used properties:
- thickness (0.5)
- fret-diagram-details
- size (1.0)
- align-dir (-0.4)

```
\harp-pedal definition-string (string)
Make a harp pedal diagram.
```

Possible elements in *definition-string*:
- pedal is up
- pedal is neutral
- pedal is down
- vertical divider line
- the following pedal should be circled (indicating a change)
The function also checks if the string has the typical form of three pedals, then the divider and then the remaining four pedals. If not it prints out a warning. However, in any case, it will also print each symbol in the order as given. This means you can place the divider (even multiple dividers) anywhere you want, but you’ll have to live with the warnings.

The appearance of the diagram can be tweaked inter alia using the size property of the TextScript grob (\override Voice.TextScript.size = \#0.3) for the overall, the thickness property (\override Voice.TextScript.thickness = \#3) for the line thickness of the horizontal line and the divider. The remaining configuration (box sizes, offsets and spaces) is done by the harp-pedal-details list of properties (\override Voice.TextScript.harp-pedal-details.box-width = \#1). It contains the following settings: box-offset (vertical shift of the box center for up/down pedals), box-width, box-height, space-before-divider (the spacing between two boxes before the divider) and space-after-divider (box spacing after the divider).

\markup \harp-pedal "^-v|--ov^"

Used properties:
- thickness (0.5)
- harp-pedal-details ()
- size (1.2)

\woodwind-diagram instrument (symbol) user-draw-commands (list)
Make a woodwind-instrument diagram. For example, say

\markup \woodwind-diagram
  #'oboe #'((lh . (d ees)) (cc . (five3qT1q)) (rh . (gis)))

for an oboe with the left-hand d key, left-hand ees key, and right-hand gis key depressed while the five-hole of the central column effectuates a trill between 1/4 and 3/4 closed.

The following instruments are supported:
- piccolo
- flute
- oboe
- clarinet
- bass-clarinet
- saxophone
- bassoon
- contrabassoon

To see all of the callable keys for a given instrument, include the function (print-keys 'instrument) in your .ly file, where instrument is the instrument whose keys you want to print.

Certain keys allow for special configurations. The entire gamut of configurations possible is as follows:
- 1q (1/4 covered)
- 1h (1/2 covered)
- 3q (3/4 covered)
- R (ring depressed)
- F (fully covered; the default if no state put)

Additionally, these configurations can be used in trills. So, for example, \texttt{three3qTR} effectuates a trill between $3/4$ full and ring depressed on the three hole. As another example, \texttt{threeRT} effectuates a trill between R and open, whereas \texttt{threeTR} effectuates a trill between open and shut. To see all of the possibilities for all of the keys of a given instrument, invoke \texttt{(print-keys-verbose 'instrument)}.

Lastly, substituting an empty list for the pressed-key alist will result in a diagram with all of the keys drawn but none filled, for example:

\begin{verbatim}
\markup \woodwind-diagram #'oboe #'()
\end{verbatim}

Used properties:
- \texttt{woodwind-diagram-details (\()}
- \texttt{font-size (0)}
- \texttt{graphical (#t)}
- \texttt{thickness (0.1)}
- \texttt{size (1)}

### A.12.7 Accordion registers

\texttt{\discant name (string)}

\texttt{\discant name} generates a discant accordion register symbol.

To make it available,
\begin{verbatim}
#(use-modules (lily accreg))
\end{verbatim}

is required near the top of your input file.

The register names in the default \texttt{\discant} register set have modeled after numeric Swiss notation like depicted in \url{http://de.wikipedia.org/wiki/Register_%28Akkordeon%29}, omitting the slashes and dropping leading zeros.

The string \texttt{name} is basically a three-digit number with the lowest digit specifying the number of 16' reeds, the tens the number of 8' reeds, and the hundreds specifying the number of 4' reeds. Without modification, the specified number of reeds in 8' is centered in the symbol. Newer instruments may have registrations where 8' can be used either within or without a tone chamber, ‘cassotto’. Notationally, the central dot then indicates use of cassotto. One can suffix the tens’ digits ‘1’ and ‘2’ with ‘+’ or ‘−’ to indicate clustering the dots at the right or left respectively rather than centered.

Some examples are

\begin{verbatim}
\discant "1" \discant "1+0"
\discant "120" \discant "131"
\end{verbatim}

Used properties:
- \texttt{font-size (0)}

\texttt{\freeBass name (string)}

\texttt{\freeBass name} generates a free bass/converter accordion register symbol for the usual two-reed layout.
To make it available,

```
#(use-modules (lily accreg))
```

is required near the top of your input file.

Available registrations are

\[\text{\textbackslash freeBass} "1" \quad \text{\textbackslash freeBass} "11"
\]

\[\text{\textbackslash freeBass} "10"
\]

Used properties:

- font-size (0)

\textbackslash stdBass \textit{name} (string)

\textbackslash stdBass \textit{name} generates a standard bass accordion register symbol.

To make it available,

```
#(use-modules (lily accreg))
```

is required near the top of your input file.

The default bass register definitions have been modeled after the article http://www.accordions.com/index/art/stradella.shtml originally appearing in Accord Magazine.

The underlying register model is

\[\text{This kind of overlapping arrangement is common for Italian instruments though the exact location of the octave breaks differ.}
\]

When not composing for a particular target instrument, using the five reed definitions makes more sense than using a four reed layout: in that manner, the ‘Master’ register is unambiguous. This is rather the rule in literature bothering about bass registrations at all.

Available registrations are

\stdBass "Soprano" \stdBass "Soft Bass"

\stdBass "Alto" \stdBass "Soft Tenor"

\stdBass "Tenor" \stdBass "Bass/Alto"

\stdBass "Master"

Used properties:

- font-size (0)

\stdBassIV name (string)
\stdBassIV name generates a standard bass accordion register symbol.

To make it available,

#(use-modules (lily accreg))

is required near the top of your input file.

The main use is for four-reed standard bass instruments with reedbank layout

Notable instruments are Morino models with MIII (the others are five-reed instead) and the Atlantic IV. Most of those models have three register switches. Some newer Morinos with MIII might have five or even seven.

The prevalent three-register layout uses the middle three switches ‘Tenor’, ‘Master’, ‘Soft Bass’. Note that the sound is quite darker than the same registrations of ‘c’, ‘f’-based instruments.

Available registrations are
Appendix A: Notation manual tables

\stdBassIV "Soprano"  \stdBassIV "Soft Bass"
\stdBassIV "Alto"  \stdBassIV "Bass/Alto"
\stdBassIV "Tenor"  \stdBassIV "Soft Bass/Alto"
\stdBassIV "Master"  \stdBassIV "Soft Tenor"

Used properties:
- font-size (0)

\stdBassV name (string)
\stdBassV name generates a standard bass accordion register symbol.

To make it available,

```lisp
#(use-modules (lily accreg))
```

is required near the top of your input file.

The main use is for five-reed standard bass instruments with reedbank layout

This tends to be the bass layout for Hohner’s Morino series without convertor or MIII manual.

With the exception of the rather new 7-register layout, the highest two chord reeds are usually sounded together. The Older instruments offer 5 or 3 bass registers. The Tango VM offers an additional ‘Solo Bass’ setting that mutes the chord reeds. The symbol on the register buttons of the Tango VM would actually match the physical five-octave layout reflected here, but it is not used in literature.

Composers should likely prefer the five-reed versions of these symbols. The mismatch of a four-reed instrument with five-reed symbols is easier to resolve for the player than the other way round.

Available registrations are
Appendix A: Notation manual tables

\stdBassVI name (string)
\stdBassVI name generates a standard bass accordion register symbol for six reed basses.

To make it available,

\texttt{#(use-modules \{lily accreg\})}

is required near the top of your input file.

This is primarily the register layout for the Hohner “Gola” model. The layout is

\begin{figure}
\centering
\includegraphics[width=0.5\textwidth]{register_layout.png}
\end{figure}

The registers are effectively quite similar to that of \stdBass. An additional bass reed at alto pitch is omitted for esthetical reasons from the ‘Master’ setting, so the symbols are almost the same except for the ‘Alto/Soprano’ register with bass notes at Alto pitch and chords at Soprano pitch.

Available registrations are

\begin{itemize}
\item \stdBassV "Bass/Alto"
\item \stdBassV "Soft Bass/Alto"
\item \stdBassV "Soft Bass"
\item \stdBassV "Soft Tenor"
\item \stdBassV "Alto"
\item \stdBassV "Tenor"
\item \stdBassV "Master"
\item \stdBassV "Soprano"
\item \stdBassV "Sopranos"
\item \stdBassV "Solo Bass"
\end{itemize}
Appendix A: Notation manual tables

\begin{verbatim}
\begin{tabular}{|c|c|}
\hline
\stdBassVI "Soprano" & \stdBassVI "Alto/Soprano" \\
\hline
\stdBassVI "Alto" & \stdBassVI "Bass/Alto" \\
\hline
\stdBassVI "Soft Tenor" & \stdBassVI "Soft Bass" \\
\hline
\stdBassVI "Master" & \\
\hline
\end{tabular}
\end{verbatim}

Used properties:
- font-size (0)

A.12.8 Other markup commands

\auto-footnote mkup (markup) note (markup)

Have footnote note act as an annotation to the markup mkup.

\begin{verbatim}
\markup {
  \auto-footnote a b
  \override #'(padding . 0.2)
  \auto-footnote c d
}
\end{verbatim}

\[ a^1 c^2 \]

\begin{verbatim}
\begin{verbatim}
1b \\
\hline
2d
\end{verbatim}
\end{verbatim}

The footnote will be annotated automatically.

Used properties:
- padding (0.0)
- raise (0.5)

\backslashed-digit num (integer)

A feta number, with backslash. This is for use in the context of figured bass notation.

\begin{verbatim}
\markup {
  \backslashed-digit #5
}\end{verbatim}
\hspace #2
\override #'(thickness . 3)
\backslashed-digit #7
}

5. \%

Used properties:
\begin{itemize}
  \item thickness (1.6)
  \item font-size (0)
\end{itemize}

\char num (integer)
Produce a single character. Characters encoded in hexadecimal format require the prefix \#x.

\markup {
  \char #65 \char \#x00a9
}

A ©

\eyeglasses
Prints out eyeglasses, indicating strongly to look at the conductor.

\markup { \eyeglasses }

\&\%

\first-visible args (markup list)
Use the first markup in args that yields a non-empty stencil and ignore the rest.

\markup {
  \first-visible {
    \fromproperty #'header:composer
    \italic Unknown
  }
}

Unknown

\footnote mkup (markup) note (markup)
Have footnote note act as an annotation to the markup mkup.

\markup {
  \footnote a b
  \override #'(padding . 0.2)
  \footnote c d
}
\section*{Appendix A: Notation manual tables}

\begin{center}
\begin{tabular}{ll}
  a & c \\
\end{tabular}
\end{center}

The footnote will not be annotated automatically.

\texttt{\textbackslash fraction }arg1\textit{ (markup)} \texttt{arg2 (markup)}

Make a fraction of two markups.

\texttt{\textbackslash markup} \{
  \texttt{\pi \approx} \\
  \texttt{\textbackslash fraction 355 113}
\}

\[\pi \approx \frac{355}{113}\]

Used properties:
- \texttt{\textbackslash fromproperty }\texttt{symbol (symbol)}

Read the \textit{symbol} from property settings, and produce a stencil from the markup contained within. If \textit{symbol} is not defined, it returns an empty markup.

\texttt{\textbackslash header} \{
  \texttt{myTitle = "myTitle"} \\
  \texttt{title = \textbackslash markup} \{
    \texttt{from} \\
    \texttt{\textbackslash italic} \\
    \texttt{\textbackslash fromproperty \#'header:myTitle}
  \}
\}

\texttt{\textbackslash markup} \{
  \texttt{\textbackslash null}
\}

\textbf{from myTitle}

\texttt{\textbackslash left-brace size (number)}

A feta brace in point size \textit{size}.

\texttt{\textbackslash markup} \{
  \texttt{\left-brace \#35} \\
  \texttt{\textbackslash hspace \#2}
\}
\left-brace \#45 \\
\}

\lookup glyph-name (string) 
Lookup a glyph by name.
\markup {
\override #'(font-encoding . fetaBraces) {
\lookup #"brace200"
\hspace #2
\rotate #180
\lookup #"brace180"
}
}

\markalphabet num (integer) 
Make a markup letter for num. The letters start with A to Z and continue with double letters.
\markup {
\markalphabet #8
\hspace #2
\markalphabet #26
}

H Z

\markletter num (integer) 
Make a markup letter for num. The letters start with A to Z (skipping letter I), and continue with double letters.
\markup {
\markletter #8
\hspace #2
\markletter #26
}

H AA

\null 
An empty markup with extents of a single point.
\markup {
\null
}
\textbf{Appendix A: Notation manual tables} 812

\texttt{\textbackslash on-the-fly procedure} (procedure) \texttt{arg (markup)}

Apply the \texttt{procedure} markup command to \texttt{arg}. \texttt{procedure} takes the same arguments as \texttt{interpret-markup} and returns a stencil.

\texttt{\textbackslash override new-prop} (pair) \texttt{arg (markup)}

Add the argument \texttt{new-prop} to the property list. Properties may be any property supported by Section “font-interface” in \texttt{Internals Reference}, Section “text-interface” in \texttt{Internals Reference} and Section “instrument-specific-markup-interface” in \texttt{Internals Reference}.

\texttt{new-prop} may be either a single alist pair, or non-empty alist of its own.

\begin{verbatim}
\markup {
\undertie "undertied"
\override #'(offset . 15)
\undertie "offset undertied"
\override #'(\(\text{thickness} . 3\))
\undertie "offset thick undertied"
}
\end{verbatim}

\textbf{undertied} offset undertied offset thick undertied

\texttt{\textbackslash page-link} \texttt{page-number} (number) \texttt{arg (markup)}

Add a link to the page \texttt{page-number} around \texttt{arg}. This only works in the PDF backend.

\begin{verbatim}
\markup {
\page-link #2 { \textit{This links to page 2... } }
}
\end{verbatim}

\textit{This links to page 2...}

\texttt{\textbackslash page-ref} \texttt{label} (symbol) \texttt{gauge} (markup) \texttt{default} (markup)

Reference to a page number. \texttt{label} is the label set on the referenced page (using \texttt{\label} or \texttt{\tocItem}), \texttt{gauge} a markup used to estimate the maximum width of the page number, and \texttt{default} the value to display when \texttt{label} is not found.

(If the current book or bookpart is set to use roman numerals for page numbers, the reference will be formatted accordingly – in which case the \texttt{gauge}’s width may require additional tweaking.)

\texttt{\textbackslash pattern} \texttt{count} (non-negative, exact integer) \texttt{axis} (non-negative, exact integer) \texttt{space} (number) \texttt{pattern} (markup)

Prints \texttt{count} times a \texttt{pattern} markup. Patterns are spaced apart by \texttt{space} (defined as for \texttt{\hspace} or \texttt{\vspace}, respectively). Patterns are distributed on \texttt{axis}.

\begin{verbatim}
\markup \column {
"Horizontally repeated :"
\pattern #7 #X #2 \texttt{\flat}
\null
"Vertically repeated :"
\pattern #3 #Y #0.5 \texttt{\flat}
}
\end{verbatim}
Horizontally repeated:
\begin{verbatim}
 b b b b b b b
\end{verbatim}

Vertically repeated:
\begin{verbatim}
 b
 b
 b
\end{verbatim}

\texttt{property-recursive symbol} (symbol)
Print out a warning when a header field markup contains some recursive markup
definition.

\texttt{right-brace size} (number)
A feta brace in point size size, rotated 180 degrees.
\begin{verbatim}
\markup{
  \right-brace #45
  \hspace #2
  \right-brace #35
}
\end{verbatim}

\texttt{slashed-digit num} (integer)
A feta number, with slash. This is for use in the context of figured bass notation.
\begin{verbatim}
\markup{
  \slashed-digit #5
  \hspace #2
  \override #'(thickness . 3)
  \slashed-digit #7
}
\end{verbatim}

5 7
Used properties:
- \texttt{thickness} (1.6)
- \texttt{font-size} (0)

\texttt{stencil stil} (stencil)
Use a stencil as markup.
\begin{verbatim}
\markup{
  \stencil #(make-circle-stencil 2 0 #t)
}
\end{verbatim}

\texttt{strut}
Create a box of the same height as the space in the current font.

\texttt{transparent arg} (markup)
Make \texttt{arg} transparent.
\begin{verbatim}
\markup{
\end{verbatim}
\transparent {  
  invisible text 
}

\verbatim-file name (string)
Read the contents of file name, and include it verbatim.
\verbatim-file #"en/included/simple.ly"

%% A simple piece in LilyPond, a scale.
relative {
  c' d e f g a b c 
}  
%% Optional helper for automatic updating 
%% by convert-ly. May be omitted.
version "2.19.21"

\whiteout arg (markup)
Provide a white background for arg. The shape of the white background is determined by style. The default is box which produces a rectangle. rounded-box produces a rounded rectangle. outline approximates the outline of the markup.

\whiteout-box
\whiteout-rounded-box
\whiteout-outline
Used properties:
- thickness ()
- style (box)

\with-color color (color) arg (markup)
Draw arg in color specified by color.

\markup {
  \with-color #red red
  \hspace #2
  \with-color #green green
  \hspace #2
  \with-color "#0000ff" blue
}

red green blue

\with-dimension axis (integer) val (pair of numbers) arg (markup)
Set the horizontal dimension of arg to val if axis is equal to X. If axis is equal to Y, set the vertical dimension of arg to val instead.

\with-dimension-from axis (integer) arg1 (markup) arg2 (markup)
Print arg2 but replace the horizontal dimension with the one from arg1 if axis is set to X. If axis is set to Y, replace the vertical dimension with the one from arg1 instead.

\with-dimensions x (pair of numbers) y (pair of numbers) arg (markup)
Set the horizontal and vertical dimensions of arg to x and y.

\with-dimensions-from arg1 (markup) arg2 (markup)
Print arg2 with the horizontal and vertical dimensions of arg1.

\with-link label (symbol) arg (markup)
Add a link to the page holding label label around arg. This only works in the PDF backend.

\markup {
  \with-link #'label {
    \italic { This links to the page containing the label... }
  }
}

\with-outline outline (markup) arg (markup)
Print arg with the outline and dimensions of outline. The outline is used by skylines to resolve collisions (not for whiteout).

\with-true-dimension axis (integer) arg (markup)
Give arg its actual dimension (extent) on axis. Sometimes, the extents of a markup’s printed ink differs from the default extents. The main case is if glyphs are involved. By default, the extents of a glyph are based on the glyph’s metrics (i.e., a default vertical and horizontal size for the glyph), which, for various reasons, are often not identical to its bounding box (i.e., the smallest rectangle that completely encompasses the glyph’s outline) – in most cases, the outline protrudes the box spanned up by the metrics.

\markup
A.13 Text markup list commands

The following commands can all be used with \markuplist:

\column-lines args (markup list)
Like \column, but return a list of lines instead of a single markup. \baseline-skip determines the space between each markup in args.

Used properties:

- \baseline-skip

\justified-lines args (markup list)
Like \justify, but return a list of lines instead of a single markup. Use \override-lines '((line-width . X)) to set the line width; X is the number of staff spaces.

Used properties:

- \text-direction (1)
- \word-space
- \line-width (#f)
- \baseline-skip

\map-commands compose (procedure) args (markup list)
This applies the function compose to every markup in args (including elements of markup list command calls) in order to produce a new markup list. Since the return value from a markup list command call is not a markup list but rather a list of stencils, this requires passing those stencils off as the results of individual markup calls. That way, the results should work out as long as no markups rely on side effects.
\override-lines new-prop (pair) args (markup list)
   Like \override, for markup lists.

\score-lines score (score)
   This is the same as the \score markup but delivers its systems as a list of lines. Its score argument is entered in braces like it would be for \score.

\string-lines strg (string)
   Takes the string strg and splits it at the character provided by the property split-char, defaulting to \#newline. Surrounding whitespace is removed from every resulting string. The returned list of markups is ready to be formatted by other markup or markup list commands like \column, \line, etc.
\markup {
   \column
   \string-lines "foo, foo,
   bar, bar,
   buzz, buzz!"
}

foo, foo,
bar, bar,
buzz, buzz!

Used properties:
   • split-char (\#newline)

\table column-align (number list) lst (markup list)
   Returns a table.
   column-align specifies how each column is aligned, possible values are -1, 0, 1. The number of elements in column-align determines how many columns will be printed. The entries to print are given by lst, a markup-list. If needed, the last row is filled up with point-stencils. Overriding padding may be used to increase columns horizontal distance. Overriding baseline-skip to increase rows vertical distance.

% A markup command to print a fixed-width number.
\markup fwnum =
\markup \override #'(font-features . ("ss01" "-kern"))
\number \etc
\markuplist {
   \override #'(padding . 2)
   \table
   #'(0 1 0 -1)
   {\underline { center-aligned right-aligned
center-aligned left-aligned }}
   one \fwnum 1 thousandth \fwnum 0.001
   eleven \fwnum 11 hundredth \fwnum 0.01
   twenty \fwnum 20 tenth \fwnum 0.1
   thousand \fwnum 1000 one \fwnum 1.0
}\}
center-aligned right-aligned center-aligned left-aligned
A.14 List of special characters

The following special characters references can be used; for more details, see [ASCII aliases], page 577.

The HTML syntax is used and most of these references are the same as HTML. The rest of them are inspired by LaTeX.

The characters are boxed so that you can see their size. A small padding has been added between the character and the box for more readability.

A.15 List of articulations

In LilyPond’s internal logic, an ‘articulation’ is any object (other than dynamics) that may be attached directly after a rhythmic event: notes, chords; even silences and skips, or the empty chord construct <> (see Section “Structure of a note entry” in Learning Manual). Even slurs, fingerings and text scripts are technically articulations, although these are not shown here.

Therefore, the following lists include not only articulation marks, but also all other scripts in the Emmentaler font that may be attached to notes (the way an accent is entered as ‘c’\accent or ‘c’\accent). Each example shows the script in its two possible vertical positions: respectively up and down, as well as its default (neutral) position. See also [Script glyphs], page 742, for a more extensive list of glyphs, for use with the \musicglyph markup command as explained in [Music notation inside markup], page 301.

A.20 Technical glossary

A glossary of the technical terms and concepts used internally in LilyPond. These terms may appear in the manuals, on mailing lists or in the source code.

**alist**

An association list or **alist** for short is a Scheme pair which associates a value with a key: `(key . value)`. For example, in `scm/lily.scm`, the alist “type-p-name-alist” associates certain type predicates (e.g., `ly:音乐`) with names (e.g., “music”) so that type check failures can be reported with a console message that includes the name of the expected type predicate.

**callback**

A **callback** is a routine, function or method whose reference is passed as an argument in a call to another routine, so allowing the called routine to invoke it. The technique enables a lower-level software layer to call a function defined in a higher layer. Callbacks are used extensively in LilyPond to permit user-level Scheme code to define how many low-level actions are performed.

**closure**

In Scheme, a **closure** is created when a function, usually a lambda expression, is passed as a variable. The closure contains the function’s code plus references to the lexical bindings of the function’s free variables (i.e., those variables used in the expression but defined outside it). When this function is applied to different arguments later, the free variable bindings that were captured in the closure are used to obtain the values of the free variables to be used in the calculation. One useful property of closures is the retention of internal variable values between invocations, so permitting state to be maintained.
glyph

A **glyph** is a particular graphical representation of a typographic character, or a combination of two characters forming a ligature. A set of glyphs with a single style and shape comprise a font, and a set of fonts covering several styles and sizes comprise a typeface.

**See also**

Notation Reference: Section 1.8.3 [Fonts], page 303, Section 3.4.4 [Special characters], page 576.

**grob**

LilyPond objects which represent items of notation in the printed output such as note heads, stems, slurs, ties, fingering, clefs, etc are called ‘Layout objects’, often known as ‘GRaphical OBjects’, or **grobs** for short. They are represented by instances of the **Grob** class.

**See also**

Notation Reference: Section A.23 [Naming conventions], page 847.

Internals Reference: Section “grob-interface” in *Internals Reference*, Section “All layout objects” in *Internals Reference*.

**immutable**

An **immutable** object is one whose state cannot be modified after creation, in contrast to a mutable object, which can be modified after creation.

In LilyPond, immutable or shared properties define the default style and behavior of grobs. They are shared between many objects. In apparent contradiction to the name, they can be changed using \override and \revert.

**See also**

Notation Reference: [mutable], page 832.

**interface**

Actions and properties which are common to a number of grobs are grouped together in an object called a **grob-interface**, or just ‘interface’ for short.

**See also**

Notation Reference: Section A.23 [Naming conventions], page 847, Section 5.2.2 [Layout interfaces], page 675.

Internals Reference: Section “Graphical Object Interfaces” in *Internals Reference*.

**lexer**

A **lexer** is a program that converts a sequence of characters into a sequence of tokens, a process called *lexical analysis*. The LilyPond lexer converts the stream obtained from an input .ly file into a tokenized stream more suited to the next stage of processing – parsing (see [parser], page 832). The LilyPond lexer is built with Flex from the lexer file lily/lexer.ll, which contains the lexical rules. This file is part of the source code and is not included in the LilyPond binary installation.
mutable
A mutable object is one whose state can be modified after creation, in contrast to an immutable object, whose state is fixed at the time of creation.

In LilyPond, mutable properties contain values that are specific to one grob. Typically, lists of other objects or results from computations are stored in mutable properties.

See also
Notation Reference: [immutable], page 831.

output-def
An instance of the Output-def class contains the methods and data structures associated with an output block. Instances are created for midi, layout and paper blocks.

parser
A parser analyzes the sequence of tokens produced by a lexer to determine its grammatical structure, grouping the tokens progressively into larger groupings according to the rules of the grammar. If the sequence of tokens is valid the end product is a tree of tokens whose root is the grammar’s start symbol. If this cannot be achieved the file is invalid and an appropriate error message is produced. The syntactic groupings and the rules for constructing the groupings from their parts for the LilyPond syntax are defined in lily/parser.yy and shown in Backus Normal Form (BNF) in Section “LilyPond grammar” in Contributor’s Guide. This file is used to build the parser during the program build by the parser generator, Bison. It is part of the source code and is not included in the LilyPond binary installation.

parser variable
These are variables defined directly in Scheme. Their direct use by users is strongly discouraged, because their scoping semantics can be confusing.

When the value of such a variable is changed in a .ly file, the change is global, and unless explicitly reverted, the new value will persist to the end of the file, affecting subsequent \score blocks as well as external files added with the \include command. This can lead to unintended consequences and in complex typesetting projects the consequent errors can be difficult to track down.

LilyPond uses the following parser variables:
- afterGraceFraction
- musicQuotes
- mode
- output-count
- output-suffix
- partCombineListener
- pitchnames
- toplevel-bookparts
- toplevel-scores
- showLastLength
- showFirstLength

prob
PROperty OBjects, or probs for short, are instances of the Prob class, a simple base class for objects which have mutable and immutable property alists and the methods to manipulate
them. The Music and Stream_event classes derive from Prob. Instances of the Prob class are also created to hold the formatted content of system grobs and titling blocks during page layout.

**smob**

Smobs, or ScheMe OBjects, are part of the mechanism used by Guile to export C and C++ objects to Scheme code. In LilyPond, smobs are created from C++ objects through macros. There are two types of smob objects: simple smobs, intended for simple immutable objects like numbers, and complex smobs, used for objects with identities. If you have access to the LilyPond sources, more information can be found in lily/includes/smob.hh.

**spanner**

Spanners are a class of grobs that are not horizontally fixed on one point of the score but extend from one point to another. Examples include beams, ties, and slurs, as well as hairpins and staff lines. Whereas non-spanners can only be broken into at most two visible pieces (for example, a clef duplicated at the end of the line and the beginning of the next line), spanners are broken into as many pieces as required by their start and end points (such as a long crescendo extending on three systems, or staff lines, which always span the whole score).

Technically, spanners are defined as grobs having the spanner-interface; on the C++ side of LilyPond, they are instances of the Spanner subclass of Grob. The left and right bounds of a spanner can be retrieved and set using ly:spanner-bound and ly:spanner-set-bound!, respectively. The bounds are always items. The X parent of a spanner has little musical sense, but is usually set to the left bound.

**See also**

Notation Reference: Section 5.4.4 [Spanners], page 692.

Internals Reference: Section “all-layout-objects” in Internals Reference, Section “spanner-interface” in Internals Reference.

**stencil**

An instance of the stencil class holds the information required to print a typographical object. It is a simple smob containing a confining box, which defines the vertical and horizontal extents of the object, and a Scheme expression which will print the object when evaluated. Stencils may be combined to form more complex stencils defined by a tree of Scheme expressions formed from the Scheme expressions of the component stencils.

The stencil property, which connects a grob to its stencil, is defined in the grob-interface interface.

**See also**

Internals Reference: Section “grob-interface” in Internals Reference.

### A.21 Available music functions

```latex
\absolute [music] - music (music)

Make music absolute. This does not actually change the music itself but rather hides it from surrounding \relative and \fixed commands.
```

```latex
\acciaccatura [music] - music (music)

Create anacciaccatura from the following music expression
```

```latex
\accidentalStyle [music] - style (symbol list)

Set accidental style to symbol list style in the form ‘piano-cautionary’. If style has a form like ‘Staff.piano-cautionary’, the settings are applied to that con-```
text. Otherwise, the context defaults to ‘Staff’, except for piano styles, which use ‘GrandStaff’ as a context.

\addChordShape [void] - key-symbol (symbol) tuning (pair) shape-definition (string or pair)
Add chord shape shape-definition to the chord-shape-table hash with the key (cons key-symbol tuning).

\addInstrumentDefinition [void] - name (string) lst (list)
Create instrument name with properties list.
This function is deprecated.

\addQuote [void] - name (string) music (music)
Define music as a quotable music expression named name

\after [music] - delta (duration) ev (music) mus (music)
Add music ev (usually a post-event) with a delay of delta after the onset of mus.

\afterGrace [music] - fraction [non-negative rational, fraction, or moment] main (music) grace (music)
Create grace note(s) after a main music expression.
The musical position of the grace expression is after a given fraction of the main note’s duration has passed. If fraction is not specified as first argument, it is taken from afterGraceFraction which has a default value of 3/4.

\allowPageTurn [music]
Allow a page turn. May be used at toplevel (ie between scores or markups), or inside a score.

\allowVoltaHook [void] - bar (string)
Allow the volta bracket hook being drawn over bar line bar.

\alterBroken [music] - property (key list or symbol) arg (list) target (key list or music)
Override property for pieces of broken spanner target with values arg. target may either be music in the form of a starting spanner event, or a symbol list in the form ‘Context.Grob’ or just ‘Grob’. If target is in the form of a spanner event, property may also have the form ‘Grob.property’ for specifying a directed tweak.

\ambitusAfter [music] - target (symbol)
Move the ambitus after the break-align symbol target.

\appendToTag [music] - tag (symbol) more (music) music (music)
Append more to the back of music tagged with tag. A post-event can be added to the articulations of rhythmic events or chords; other expressions may be added to chords, sequential or simultaneous music.

\applyContext [music] - proc (procedure)
Modify context properties with Scheme procedure proc.

\applyMusic [music] - func (procedure) music (music)
Apply procedure func to music.

\applyOutput [music] - target (symbol list or symbol) proc (procedure)
Apply function proc to every layout object matched by target which takes the form Context or Context.Grob.

\appoggiatura [music] - music (music)
Create an appoggiatura from music

\assertBeamQuant [music] - l (pair) r (pair)
Testing function: check whether the beam quants l and r are correct.
Appendix A: Notation manual tables

\assertBeamSlope [music] - comp (procedure)
Testing function: check whether the slope of the beam is the same as comp.

Make voices that switch between staves automatically. As an option the pitch where to switch staves may be specified. The clefs for the staves are optional as well. Setting clefs works only for implicitly instantiated staves.

\balloonGrobText [music] - grob-name (symbol) offset (pair of numbers) text (markup)
Attach text to grob-name at offset offset (use like \once).

\balloonText [post event] - offset (pair of numbers) text (markup)
Attach text at offset (use like \tweak).

\bar [music] - type (string)
Insert a bar line of type type, overriding any automatic bar lines.

\barNumberCheck [music] - n (integer)
Print a warning if the current bar number is not n.

\beamExceptions (any type) - music (music)
Extract a value suitable for setting Timing.beamExceptions from the given pattern with explicit beams in music. A bar check | has to be used between bars of patterns in order to reset the timing.

\bendAfter [post event] - delta (real number)
Create a fall or doit of pitch interval delta.

\bendHold [post event] - mus (music)
Sets the 'style of a BendSpanner to 'hold.

\bendStartLevel [post event] - idx (non-negative, exact integer) mus (music)
Sets the details.successive-level of a BendSpanner to idx.

\bookOutputName [void] - newfilename (string)
Direct output for the current book block to newfilename.

\bookOutputSuffix [void] - newsuffix (string)
Set the output filename suffix for the current book block to newsuffix.

\breathe [music]
Insert a breath mark.

\caesura [music]
Insert a caesura.

\chordRepeats [music] - event-types [list] music (music)
Walk through music putting the notes of the previous chord into repeat chords, as well as an optional list of event-types such as #'(string-number-event).

\clef [music] - type (string)
Set the current clef to type.

\codaMark [music] - num [non-negative, exact integer]
Create a coda mark. num may be 1 for the first mark, 2 for the second, etc., or it may be \default to use the next number in sequence automatically.

\compoundMeter [music] - args (pair)
Create compound time signatures. The argument is a Scheme list of lists. Each list describes one fraction, with the last entry being the denominator, while the first
Appendix A: Notation manual tables

entries describe the summands in the enumerator. If the time signature consists of just one fraction, the list can be given directly, i.e. not as a list containing a single list. For example, a time signature of \((3+1)/8 + 2/4\) would be created as \(\texttt{\textbackslash compoundMeter #'(3 1 8) (2 4)}\), and a time signature of \((3+2)/8\) as \(\texttt{\textbackslash compoundMeter #'(3 2 8)}\) or shorter \(\texttt{\textbackslash compoundMeter #'(3 2 8)}\).

\texttt{\textbackslash compressMMRests [music]} - \texttt{music (music)}

Remove the empty bars created by multi-measure rests, leaving just the first bar containing the MM rest itself.

\texttt{\textbackslash crossStaff [music]} - \texttt{notes (music)}

Create cross-staff stems.

\texttt{\textbackslash cueClef [music]} - \texttt{type (string)}

Set the current cue clef to \texttt{type}.

\texttt{\textbackslash cueClefUnset [music]}

Unset the current cue clef.

\texttt{\textbackslash cueDuring [music]} - \texttt{what (string) dir (direction) main-music (music)}

Insert contents of quote \texttt{what} corresponding to \texttt{main-music}, in a CueVoice oriented by \texttt{dir}.

\texttt{\textbackslash cueDuringWithClef [music]} - \texttt{what (string) dir (direction) clef (string) main-music (music)}

Insert contents of quote \texttt{what} corresponding to \texttt{main-music}, in a CueVoice oriented by \texttt{dir}.

\texttt{\textbackslash deadNote [music]} - \texttt{note (music)}

Print \texttt{note} with a cross-shaped note head.

\texttt{\textbackslash defineBarLine [void]} - \texttt{bar (string) glyph-list (list)}

Define bar line settings for bar line \texttt{bar}. The list \texttt{glyph-list} must have three entries which define substitute glyphs for the end of a line, the beginning of a line, and a span bar, respectively. The substitute glyphs may be either strings or booleans: \texttt{#t} calls for the same value as \texttt{bar} and \texttt{#f} calls for no glyph.

\texttt{\textbackslash displayLilyMusic [music]} - \texttt{port [output port] music (music)}

Display the LilyPond input representation of \texttt{music} to \texttt{port}, defaulting to the console.

\texttt{\textbackslash displayMusic [music]} - \texttt{port [output port] music (music)}

Display the internal representation of \texttt{music} to \texttt{port}, defaulting to the console.

\texttt{\textbackslash displayScheme (any type)} - \texttt{port [output port] expr (any type)}

Display the internal representation of \texttt{expr} to \texttt{port}, defaulting to the console.

\texttt{\textbackslash dropNote [music]} - \texttt{num (integer) music (music)}

Drop a note of any chords in \texttt{music}, in \texttt{num} position from above.

\texttt{\textbackslash enablePolymeter [void]}

For use within an output definition. Enables polymetry, moving timing management from Score to Staff-like contexts. This is done by removing the Timing_ translator from Score, and adding it to all contexts having the Staff alias.

\texttt{\textbackslash endSpanners [music]} - \texttt{music (music)}

Terminate the next spanner prematurely after exactly one note without the need of a specific end spanner.

\texttt{\textbackslash eventChords [music]} - \texttt{music (music)}

Compatibility function wrapping EventChord around isolated rhythmic events occurring since version 2.15.28, after expanding repeat chords ‘q’.
\texttt{\textbackslash featherDurations} [music] - \textit{scale} (non-negative rational, fraction, or moment) \textit{argument} (music)

Adjust durations of music in \textit{argument} by \textit{scale}.

\texttt{\textbackslash finger} [post event] - \textit{finger} (index or markup)

Apply \textit{finger} as a fingering indication.

\texttt{\textbackslash fixed} [music] - \textit{pitch} (pitch) \textit{music} (music)

Use the octave of \textit{pitch} as the default octave for \textit{music}.

\texttt{\textbackslash footnote} [music] - \textit{mark} [markup] \textit{offset} (pair of numbers) \textit{footnote} (markup) \textit{item} (symbol list or music)

Make the markup \textit{footnote} a footnote on \textit{item}. The footnote is marked with a markup \textit{mark} moved by \textit{offset} with respect to the marked music.

If \textit{mark} is not given or specified as \texttt{\textbackslash default}, it is replaced by an automatically generated sequence number. If \textit{item} is a symbol list of form ‘Grob’ or ‘Context.Grob’, then grobs of that type will be marked at the current time step in the given context (default Bottom).

If \textit{item} is music, the music will get a footnote attached to a grob immediately attached to the event, like \texttt{\textbackslash tweak} does. For attaching a footnote to an \textit{indirectly} caused grob, write \texttt{\textbackslash single\textbackslash footnote}, use \textit{item} to specify the grob, and follow it with the music to annotate.

Like with \texttt{\textbackslash tweak}, if you use a footnote on a following post-event, the \texttt{\textbackslash footnote} command itself needs to be attached to the preceding note or rest as a post-event with -.

\texttt{\textbackslash grace} [music] - \textit{music} (music)

Insert \textit{music} as grace notes.

\texttt{\textbackslash grobdescriptions} (any type) - \textit{descriptions} (list)

Create a context modification from \textit{descriptions}, a list in the format of all-grob-descriptions.

\texttt{\textbackslash harmonicByFret} [music] - \textit{fret} (number) \textit{music} (music)

Convert \textit{music} into mixed harmonics; the resulting notes resemble harmonics played on a fretted instrument by touching the strings at \textit{fret}.

\texttt{\textbackslash harmonicByRatio} [music] - \textit{ratio} (number) \textit{music} (music)

Convert \textit{music} into mixed harmonics; the resulting notes resemble harmonics played on a fretted instrument by touching the strings at the point given through \textit{ratio}.

\texttt{\textbackslash harmonicNote} [music] - \textit{note} (music)

Print \textit{note} with a diamond-shaped note head.

\texttt{\textbackslash harmonicsOn} [music]

Set the default note head style to a diamond-shaped style.

\texttt{\textbackslash hide} [music] - \textit{item} (symbol list or music)

Set \textit{item}’s ‘transparent’ property to \#t, making it invisible while still retaining its dimensions.

If \textit{item} is a symbol list of form GrobName or Context.GrobName, the result is an override for the grob name specified by it. If \textit{item} is a music expression, the result is the same music expression with an appropriate tweak applied to it.

\texttt{\textbackslash incipit} [music] - \textit{incipit-music} (music)

Output \textit{incipit-music} before the main staff as an indication of its appearance in the original music.
\inherit-acceptability [void] - to (symbol) from (symbol)
When used in an output definition, will modify all context definitions such that context to is accepted as a child by all contexts that also accept from.

\inStaffSegno [music]
Put the segno variant 'varsegno' at this position into the staff, compatible with the repeat command.

\instrumentSwitch [music] - name (string)
Switch instrument to name, which must have been predefined with function \addInstrumentDefinition.
This function is deprecated.

\inversion [music] - around (pitch) to (pitch) music (music)
Invert music about around and transpose from around to to.

\invertChords [music] - num (integer) music (music)
Invert any chords in music into their num-th position. (Chord inversions may be directed downwards using negative integers.)

\jump [music] - text (markup)
Mark a point of departure, e.g. 'Gavotte I D.C.'.

\keepWithTag [music] - tags (symbol list or symbol) music (music)
Include only elements of music that are tagged with one of the tags in tags. tags may be either a single symbol or a list of symbols.
Each tag may be declared as a member of at most one tag group (defined with \tagGroup). If none of a music element’s tags share a tag group with one of the specified tags, the element is retained.

\key [music] - tonic [pitch] pitch-alist [list of number pairs]
Set key to tonic and scale pitch-alist. If both are null, just generate KeyChangeEvent.

\killCues [music] - music (music)
Remove cue notes from music.

\label [music] - label (symbol)
Create label as a referrable label.

\language [void] - language (string)
Set note names for language language.

\languageRestore [void]
Restore a previously-saved pitchnames alist.

\languageSaveAndChange [void] - language (string)
Store the previous pitchnames alist, and set a new one.

\magnifyMusic [music] - mag (positive number) music (music)
Magnify the notation of music without changing the staff-size, using mag as a size factor. Stems, beams, slurs, ties, and horizontal spacing are adjusted automatically.

\magnifyStaff [music] - mag (positive number)
Change the size of the staff, adjusting notation size and horizontal spacing automatically, using mag as a size factor.

\makeClusters [music] - arg (music)
Display chords in arg as clusters.

\makeDefaultStringTuning [void] - symbol (symbol) pitches (list)
This defines a string tuning symbol via a list of pitches. The symbol also gets registered in defaultStringTunings for documentation purposes.
\mark [music] - \textit{label} [index or markup]
Create a rehearsal mark. If \textit{label} is an integer, create the rehearsal mark for the given sequence number. If \textit{label} is \texttt{\textbackslash default}, create the next sequential rehearsal mark. If \textit{label} is markup, use it for the mark.

\markupMap [music] - \textit{path} (symbol list or symbol) \textit{markupfun} (markup-function) \textit{music} (music)
This applies the given markup function \textit{markupfun} to all markup music properties matching \textit{path} in \textit{music}.
For example,
\begin{verbatim}
\new Voice \{ g'2 c'' \}
\addlyrics \{
  \markupMap LyricEvent.text
  \markup \with-color \textcolor{red}{\texttt{\textbackslash etc}}
  \{ Oh yes! \}
\}
\end{verbatim}

\modalInversion [music] - around (pitch) to (pitch) scale (music) \textit{music} (music)
Invert \textit{music} about \textit{around} using \textit{scale} and transpose from \textit{around} to \textit{to}.

\modalTranspose [music] - from (pitch) to (pitch) scale (music) \textit{music} (music)
Transpose \textit{music} from \textit{from} to \textit{to} using \textit{scale}.

\musicMap [music] - proc (procedure) \textit{mus} (music)
Apply \textit{proc} to \textit{mus} and all of the music it contains.

\noPageBreak [music]
Forbid a page break. May be used at toplevel (i.e., between scores or markups), or inside a score.

\noPageTurn [music]
Forbid a page turn. May be used at toplevel (i.e., between scores or markups), or inside a score.

\octaveCheck [music] - pitch (pitch)
Octave check.

\offset [music] - \textit{property} (symbol list or symbol) \textit{offsets} (any type) \textit{item} (key list or music)
Offset the default value of \textit{property} of \textit{item} by \textit{offsets}. If \textit{item} is a string, the result is \texttt{\textbackslash override} for the specified grob type. If \textit{item} is a music expression, the result is the same music expression with an appropriate tweak applied.

\omit [music] - \textit{item} (symbol list or music)
Set \textit{item}'s 'stencil' property to \texttt{\textbackslash #f}, effectively omitting it without taking up space.
If \textit{item} is a symbol list of form \texttt{Context.GrobName} or \texttt{GrobName}, the result is an override for the grob name specified by it. If \textit{item} is a music expression, the result is the same music expression with an appropriate tweak applied to it.

\once [music] - \textit{music} (music)
Set once to \texttt{\textbackslash #t} on all layout instruction events in \textit{music}.

\ottava [music] - octave (integer)
Set the octavation.

\overrideProperty [music] - \textit{grob-property-path} (list of indexes or symbols) \textit{value} (any type)
Set the grob property specified by \textit{grob-property-path} to \textit{value}. \textit{grob-property-path} is a symbol list of the form \texttt{Context.GrobName.property} or \texttt{GrobName.property}, possibly with subproperties given as well.
As opposed to \override which overrides the context-dependent defaults with which a grob is created, this command uses Output_property_ engraver at the grob acknowledge stage. This may be necessary for overriding values set after the initial grob creation.

\overrideTimeSignatureSettings [music] - time-signature (fraction, as pair) base-moment (fraction, as pair) beat-structure (list) beam-exceptions (list) Override timeSignatureSettings for time signatures of time-signature to have settings of base-moment, beat-structure, and beam-exceptions.

\pageBreak [music] Force a page break. May be used at toplevel (i.e., between scores or markups), or inside a score.

\pageTurn [music] Force a page turn between two scores or top-level markups.

\palmMute [music] - note (music) Print note with a triangle-shaped note head.

\palmMuteOn [music] Set the default note head style to a triangle-shaped style.

\parallelMusic [void] - voice-ids (list) music (music) Define parallel music sequences, separated by ’|’ (bar check signs), and assign them to the identifiers provided in voice-ids. voice-ids: a list of music identifiers (symbols containing only letters) music: a music sequence, containing BarChecks as limiting expressions.

Example:
\parallelMusic A,B,C { c c | d d | e e | d d | e e | f f | }
\parallelMusic \{ c c | d d \}
\parallelMusic \{ d d | e e \}
\parallelMusic \{ e e | f f \}
The last bar checks in a sequence are not copied to the result in order to facilitate ending the last entry at non-bar boundaries.

\parenthesize [music] - arg (symbol list or music) Tag arg to be parenthesized. arg may be either a music event or a grob path.

\partCombine [music] - chord-range [pair of numbers] part1 (music) part2 (music) Take the music in part1 and part2 and return a music expression containing simultaneous voices, where part1 and part2 are combined into one voice where appropriate. Optional chord-range sets the distance in steps between notes that may be combined into a chord or unison.

\partCombineDown [music] - chord-range [pair of numbers] part1 (music) part2 (music) Take the music in part1 and part2 and typeset so that they share a staff with stems directed downward.

\partCombineForce [music] - type [symbol] Override the part-combiner.
Appendix A: Notation manual tables

\partCombineUp [music] - chord-range [pair of numbers] part1 (music) part2 (music)

Take the music in part1 and part2 and typeset so that they share a staff with stems directed upward.

\partial [music] - dur (duration)

Make a partial measure.

\phrasingSlurDashPattern [music] - dash-fraction (number) dash-period (number)

Set up a custom style of dash pattern for dash-fraction ratio of line to space repeated at dash-period interval for phrasing slurs.

\pitchedTrill [music] - main-note (music) secondary-note (music)

Print a trill with main-note as the main note of the trill and print secondary-note as a stemless note head in parentheses.

\pointAndClickOff [void]

Suppress generating extra code in final-format (e.g. pdf) files to point back to the lilypond source statement.

\pointAndClickOn [void]

Enable generation of code in final-format (e.g. pdf) files to reference the originating lilypond source statement; this is helpful when developing a score but generates bigger final-format files.

\pointAndClickTypes [void] - types (symbol list or symbol)

Set a type or list of types (such as #'note-event) for which point-and-click info is generated.

\preBend [post event] - mus (music)

Sets the 'style of a BendSpanner to 'pre-bend.

\preBendHold [post event] - mus (music)

Sets the 'style of a BendSpanner to 'pre-bend-hold.

\propertyOverride [music] - grob-property-path (list of indexes or symbols) value (any type)

Set the grob property specified by grob-property-path to value. grob-property-path is a symbol list of the form Context.GrobName.property or GrobName.property, possibly with subproperties given as well. This music function is mostly intended for use from Scheme as a substitute for the built-in \override command.

\propertyRevert [music] - grob-property-path (list of indexes or symbols)

Revert the grob property specified by grob-property-path to its previous value. grob-property-path is a symbol list of the form Context.GrobName.property or GrobName.property, possibly with subproperties given as well. This music function is mostly intended for use from Scheme as a substitute for the built-in \revert command.

\propertySet [music] - property-path (symbol list or symbol) value (any type)

Set the context property specified by property-path to value. This music function is mostly intended for use from Scheme as a substitute for the built-in \set command.

\propertyTweak [music] - prop (key list or symbol) value (any type) item (key list or music)

Add a tweak to the following item, usually music. This generally behaves like \tweak but will turn into an \override when item is a symbol list. In that case, item specifies the grob path to override. This is mainly useful when using \propertyTweak as as a component for building other functions like \omit. It is not the default behavior for \tweak since many input strings in \lyricmode can serve equally as music or as symbols which causes surprising behavior when tweaking lyrics using the less specific semantics of \propertyTweak.
prop can contain additional elements in which case a nested property (inside of an
alist) is tweaked.

propertyUnset [music] - property-path (symbol list or symbol)
Unset the context property specified by property-path. This music function is mostly
intended for use from Scheme as a substitute for the built-in \unset command.

pushToTag [music] - tag (symbol) more (music) music (music)
Add more to the front of music tagged with tag. A post-event can be added to
the articulations of rhythmic events or chords; other expressions may be added to
chords, sequential or simultaneous music.

quoteDuring [music] - what (string) main-music (music)
Indicate a section of music to be quoted. what indicates the name of the quoted
voice, as specified in an \addQuote command. main-music is used to indicate the
length of music to be quoted; usually contains spacers or multi-measure rests.

raiseNote [music] - num (integer) music (music)
Raise a note of any chords in music, in num position from below.

reduceChords [music] - music (music)
Reduce chords contained in music to single notes, intended mainly for reusing music
in RhythmicStaff. Does not reduce parallel music.

relative [music] - pitch [pitch] music (music)
Make music relative to pitch. If pitch is omitted, the first note in music is given in
absolute pitch.

removeWithTag [music] - tags (symbol list or symbol) music (music)
Remove elements of music that are tagged with one of the tags in tags. tags may
be either a single symbol or a list of symbols.

resetRelativeOctave [music] - pitch (pitch)
Set the octave inside a \relative section.

retrograde [music] - music (music)
Return music in reverse order.

revertTimeSignatureSettings [music] - time-signature (pair)
Revert timeSignatureSettings for time signatures of time-signature.

rightHandFinger [post event] - finger (index or markup)
Apply finger as a fingering indication.

scaleDurations [music] - fraction (non-negative rational, fraction, or moment) music (music)
Multiply the duration of events in music by fraction.

sectionLabel [music] - text (markup)
Mark the beginning of a named passage, e.g. “Coda”. This is well suited for use at
a section division created with \section, but it does not imply \section and may
be used alone.

segnoMark [music] - num [non-negative, exact integer]
Create a segno mark (or bar line, if the segnoStyle context property is ’bar-line).
num may be 1 for the first segno, 2 for the second, etc., or it may be \default to
use the next number in sequence automatically.

settingsFrom (any type) - ctx [symbol] music (music)
Take the layout instruction events from music, optionally restricted to those applying
to context type ctx, and return a context modification duplicating their effect.
\shape [music] - offsets (list) item (key list or music)
Offset control-points of item by offsets. The argument is a list of number pairs or list of such lists. Each element of a pair represents an offset to one of the coordinates of a control-point. The y-coordinate of each number pair is scaled by staff space. If item is a string, the result is \once\override for the specified grob type. If item is a music expression, the result is the same music expression with an appropriate tweak applied.

\shiftDurations [music] - dur (integer) dots (integer) arg (music)
Change the duration of arg by adding dur to the durlog of arg and dots to the dots of arg.

\single [music] - overrides (music) music (music)
Convert overrides to tweaks and apply them to music. This does not convert \revert, \set or \unset.

\skip [music] - arg (duration-or-music)
Skip over arg, which may be music or a duration.

\slashedGrace [music] - music (music)
Create slashed graces (slashes through stems, but no slur) from the following music expression

\slurDashPattern [music] - dash-fraction (number) dash-period (number)
Set up a custom style of dash pattern for dash-fraction ratio of line to space repeated at dash-period interval for slurs.

\staffHighlight [music] - color (color)
Start a highlight with the specified color.

\storePredefinedDiagram [void] - fretboard-table (hash table) chord (music) tuning (pair)
diagram-definition (string or pair)
Add predefined fret diagram defined by diagram-definition for the chord pitches chord and the string tuning tuning.

\stringTuning (any type) - chord (music)
Convert chord to a string tuning. chord must be in absolute pitches and should have the highest string number (generally the lowest pitch) first.

\styledNoteHeads [music] - style (symbol) heads (symbol list or symbol) music (music)
Set heads in music to style.

\tabChordRepeats [music] - event-types [list] music (music)
Walk through music putting the notes, fingerings and string numbers of the previous chord into repeat chords, as well as an optional list of event-types such as #'(articulation-event).

\tabChordRepetition [void]
Include the string and fingering information in a chord repetition. This function is deprecated; try using \tabChordRepeats instead.

\tag [music] - tags (symbol list or symbol) music (music)
Tag the following music with tags and return the result, by adding the single symbol or symbol list tags to the tags property of music.

\tagGroup [void] - tags (symbol list)
Define a tag group comprising the symbols in the symbol list tags. Tag groups must not overlap.
\textit{\texttt{\textbackslash temporary [music] - music (music)}}

Make any \texttt{\textbackslash override} in \textit{music} replace an existing grob property value only temporarily, restoring the old value when a corresponding \texttt{\textbackslash revert} is executed. This is achieved by clearing the ‘pop-first’ property normally set on \texttt{\textbackslash overrides}.

An \texttt{\textbackslash override/\textbackslash revert} sequence created by using \texttt{\textbackslash temporary} and \texttt{\textbackslash undo} on the same \textit{music} containing overrides will cancel out perfectly or cause a warning.

Non-property-related \textit{music} is ignored, warnings are generated for any property-changing \textit{music} that isn’t an \texttt{\textbackslash override}.

\textit{\texttt{\textbackslash textEndMark [music] - text (markup)}}

(undocumented; fixme)

\textit{\texttt{\textbackslash textMark [music] - text (markup)}}

(undocumented; fixme)

\textit{\texttt{\textbackslash tieDashPattern [music] - dash-fraction (number) dash-period (number)}}

Set up a custom style of dash pattern for \texttt{\textbackslash dash-fraction} ratio of line to space repeated at \texttt{\textbackslash dash-period} interval for ties.

\textit{\texttt{\textbackslash time [music] - beat-structure [number list] fraction (fraction, as pair)}}

Set \texttt{\textbackslash fraction} as time signature, with optional number list \texttt{\textbackslash beat-structure} before it.

\textit{\texttt{\textbackslash times [music] - fraction (fraction, as pair) music (music)}}

Scale \textit{music} in time by \texttt{\textbackslash fraction}.

\textit{\texttt{\textbackslash tocItem [music] - label [symbol list or symbol] text (markup)}}

Add a line to the table of contents, using the \texttt{\textbackslash tocItemMarkup} paper variable markup and assigning it to \texttt{\textbackslash label} if one is provided. If a hierarchy of labels is given, make the current item a child of the corresponding objects.

\textit{\texttt{\textbackslash transpose [music] - from (pitch) to (pitch) music (music)}}

Transpose \textit{music} from pitch \texttt{\textbackslash from} to pitch \texttt{\textbackslash to}.

\textit{\texttt{\textbackslash transposedCueDuring [music] - what (string) dir (direction) pitch (pitch) main-music (music)}}

Insert notes from the part \texttt{\textbackslash what} into a voice called \texttt{\textbackslash cue}, using the transposition defined by \texttt{\textbackslash pitch}. This happens simultaneously with \texttt{\textbackslash main-music}, which is usually a rest. The argument \texttt{\textbackslash dir} determines whether the cue notes should be notated as a first or second voice.

\textit{\texttt{\textbackslash transposition [music] - pitch (pitch)}}

Set instrument transposition

\textit{\texttt{\textbackslash tuplet [music] - ratio (fraction, as pair) tuplet-span [duration] music (music)}}

Scale the given \textit{music} to tuplets. \texttt{\textbackslash ratio} is a fraction that specifies how many notes are played in place of the nominal value: it will be ‘3/2’ for triplets, namely three notes being played in place of two. If the optional duration \texttt{\textbackslash tuplet-span} is specified, it is used instead of \texttt{tupletSpannerDuration} for grouping the tuplets. For example,

\begin{verbatim}
\tuplet 3/2 4 \{ c8 c c c c c \}
\end{verbatim}

will result in two groups of three tuplets, each group lasting for a quarter note.

\textit{\texttt{\textbackslash tupletSpan [music] - tuplet-span [duration]}}

Set \texttt{tupletSpannerDuration}, the length into which \texttt{\textbackslash tuplet} without an explicit ‘tuplet-span’ argument of its own will group its tuplets, to the duration \texttt{tuplet-span}. To revert to the default of not subdividing the contents of a \texttt{\textbackslash tuplet} command without explicit ‘tuplet-span’, use

\begin{verbatim}
\tupletSpan \default
\end{verbatim}
\tweak [music] - prop (key list or symbol) value (any type) music (music)
  Add a tweak to the following music. Layout objects created by music get their property prop set to value. If prop has the form ‘Grob.property’, like with
  \tweak Accidental.color #red cis'
n an indirectly created grob (‘Accidental’ is caused by ‘NoteHead’) can be tweaked; otherwise only directly created grobs are affected.
  prop can contain additional elements in which case a nested property (inside of an alist) is tweaked.
  If music is an ‘event-chord’, every contained ‘rhythmic-event’ is tweaked instead.

\undo [music] - music (music)
  Convert \override and \set in music to \revert and \unset, respectively. Any reverts and unsets already in music cause a warning. Non-property-related music is ignored.

\unfolded [music] - music (music)
  Mask music until the innermost enclosing repeat is unfolded.

\unfoldRepeats [music] - types [symbol list or symbol] music (music)
  Force \repeat volta, \repeat tremolo or \repeat percent commands in music to be interpreted as \repeat unfold, if specified in the optional symbol-list types.
  The default for types is an empty list, which will force any of those commands in music to be interpreted as \repeat unfold. Possible entries are volta, tremolo or percent. Multiple entries are possible.

\voices [music] - ids (list of indexes or symbols) music (music)
  Take the given key list of numbers (indicating the use of ‘\voiceOne’...) or symbols (indicating voice names, typically converted from strings by argument list processing) and assign the following \-separated music to contexts according to that list.
  Named rather than numbered contexts can be used for continuing one voice (for the sake of spanners and lyrics), usually requiring a \voiceOne-style override at the beginning of the passage and a \oneVoice override at its end.
  The default
  \[ << ... \ \ ... \ \ ... >>
  construct would correspond to
  \voices 1,2,3 << ... \ \ ... \ \ ... >>

\void [void] - arg (any type)
  Accept a scheme argument, return a void expression. Use this if you want to have a scheme expression evaluated because of its side-effects, but its value ignored.

\volta [music] - volta-numbers (number list) music (music)
  Mark music as being limited to the volte given in volta-numbers when the innermost enclosing repeat is unfolded. Volta number begins at 1 and increases by 1 with each repetition.

\vshape [music] - offsets (list) item (key list or music)
  Like \shape, but additionally show control points for ease of tweaking.

\withMusicProperty [music] - sym (symbol) val (any type) music (music)
  Set sym to val in music.

\xNote [music] - note (music)
  Print note with a cross-shaped note head.
Appendix A: Notation manual tables

\[= \text{[post event]} - \text{id (index or symbol)} \text{ event (post event)} \]

This sets the \text{spanner-id} property of the following event to the given \text{id} (non-negative integer or symbol). This can be used to tell LilyPond how to connect overlapping or parallel slurs or phrasing slurs within a single \text{Voice}.

\[
\text{fixed} \ c' \{ c\!\!1( \ d\!\!2( \ e\!\!1) \ f\!\!2) \}
\]

### A.22 Context modification identifiers

The following commands are defined for use as context modifications within a \texttt{\layout} or \texttt{\with} block.

\texttt{\EnableGregorianDivisiones}

Configure division commands such as \texttt{\section} to create \texttt{Divisio} grobs rather than \texttt{BarLine} grobs. This does not affect measure bar lines or the properties of the grobs themselves.

- Sets translator property \texttt{caesuraTypeTransform} to \texttt{caesura-to-divisio}.
- Sets translator property \texttt{doubleRepeatBarType} to '\('\).
- Sets translator property \texttt{endRepeatBarType} to '\('\).
- Sets translator property \texttt{fineBarType} to '\"\'.
- Sets translator property \texttt{sectionBarType} to '\"\'.
- Sets translator property \texttt{startRepeatBarType} to '\('\).
- Sets translator property \texttt{underlyingRepeatBarType} to '\"\'.
- Sets translator property \texttt{doubleRepeatSegnoBarType} to '\"S-||\"'.
- Sets translator property \texttt{endRepeatSegnoBarType} to '\"S-||\"'.
- Sets translator property \texttt{fineSegnoBarType} to '\"S-||\"'.
- Sets translator property \texttt{fineStartRepeatSegnoBarType} to '\"S-||\"'.
- Sets translator property \texttt{segnoBarType} to '\"S-||\"'.
- Sets translator property \texttt{startRepeatSegnoBarType} to '\"S-||\"'.

\texttt{\RemoveAllEmptyStaves}

Remove staves which are considered to be empty according to the list of interfaces set by \texttt{keepAliveInterfaces}, including those in the first system.

- Sets grob property \texttt{remove-empty} in Section ‘‘VerticalAxisGroup’’ in \texttt{ internals Reference} to \texttt{#t}.
- Sets grob property \texttt{remove-first} in Section ‘‘VerticalAxisGroup’’ in \texttt{ internals Reference} to \texttt{#t}.

\texttt{\RemoveEmptyStaves}

Remove staves which are considered to be empty according to the list of interfaces set by \texttt{keepAliveInterfaces}.

- Sets grob property \texttt{remove-empty} in Section ‘‘VerticalAxisGroup’’ in \texttt{ internals Reference} to \texttt{#t}. 
## A.23 Naming conventions

Naming conventions are used so that it is easier to keep the nature of an object in mind.

<table>
<thead>
<tr>
<th>Object/property type</th>

</tr>
</tbody>
</table>

## A.24 Predefined type predicates

Predicates return #t when their argument is of the named type and #f if it isn’t.

### R5RS primary predicates

Primary predicates can be applied to any expression. They can be used on their own as predicates for LilyPond functions. The predicates here are part of the Scheme standard R5RS.

<table>
<thead>
<tr>
<th>Type predicate</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>boolean?</td>
<td>boolean</td>
</tr>
<tr>
<td>char?</td>
<td>character</td>
</tr>
<tr>
<td>complex?</td>
<td>complex number</td>
</tr>
<tr>
<td>eof-object?</td>
<td>end-of-file object</td>
</tr>
<tr>
<td>input-port?</td>
<td>input port</td>
</tr>
<tr>
<td>integer?</td>
<td>integer</td>
</tr>
<tr>
<td>list?</td>
<td>list (use cheap-list? for faster processing)</td>
</tr>
<tr>
<td>null?</td>
<td>null</td>
</tr>
<tr>
<td>number?</td>
<td>number</td>
</tr>
<tr>
<td>output-port?</td>
<td>output port</td>
</tr>
<tr>
<td>pair?</td>
<td>pair</td>
</tr>
<tr>
<td>port?</td>
<td>port</td>
</tr>
<tr>
<td>procedure?</td>
<td>procedure</td>
</tr>
</tbody>
</table>

2 For historical reasons, some but not all of the functions defined by LilyPond start with the ly: prefix.
rational? rational number
real? real number
string? string
symbol? symbol
vector? vector

**R5RS secondary predicates**

Secondary predicates are only applicable to specific expressions (for example, to numbers). They will throw a type error when applied to expressions they are not intended for. The predicates here are part of the Scheme standard R5RS.

<table>
<thead>
<tr>
<th>Type predicate</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>char-alphabetic?</td>
<td>alphabetic character</td>
</tr>
<tr>
<td>char-lower-case?</td>
<td>lower-case character</td>
</tr>
<tr>
<td>char-numeric?</td>
<td>numeric character</td>
</tr>
<tr>
<td>char-upper-case?</td>
<td>upper-case character</td>
</tr>
<tr>
<td>char-whitespace?</td>
<td>whitespace character</td>
</tr>
<tr>
<td>even?</td>
<td>even number</td>
</tr>
<tr>
<td>exact?</td>
<td>exact number</td>
</tr>
<tr>
<td>inexact?</td>
<td>inexact number</td>
</tr>
<tr>
<td>negative?</td>

</tr>
<tr>
<td>odd?</td>
<td>odd number</td>
</tr>
<tr>
<td>positive?</td>
<td>positive number</td>
</tr>
<tr>
<td>zero?</td>
<td>zero</td>
</tr>
</tbody>
</table>

**Guile predicates**

These predicates are defined by Guile but are not part of a Scheme standard.

<table>
<thead>
<tr>
<th>Type predicate</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>hash-table?</td>
<td>hash table</td>
</tr>
</tbody>
</table>

**LilyPond scheme predicates**

These predicates are only available within LilyPond and defined in Scheme.

<table>
<thead>
<tr>
<th>Type predicate</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>alist?</td>
<td>association list (list of pairs)</td>
</tr>
<tr>
<td>boolean-or-symbol?</td>
<td>boolean or symbol</td>
</tr>
<tr>
<td>cheap-list?</td>
<td>list (use this instead of list? for faster processing)</td>
</tr>
<tr>
<td>color?</td>
<td>color</td>
</tr>
<tr>
<td>exact-rational?</td>
<td>an exact rational number</td>
</tr>
<tr>
<td>fraction?</td>
<td>fraction, as pair</td>
</tr>
<tr>
<td>grob-list?</td>
<td>list of grobs</td>
</tr>
<tr>
<td>index?</td>
<td>non-negative, exact integer</td>
</tr>
<tr>
<td>index-or-markup?</td>
<td>index or markup</td>
</tr>
<tr>

Appendix C GNU Free Documentation License

Version 1.3, 3 November 2008

https://fsf.org/

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

0. PREAMBLE

The purpose of this License is to make a manual, textbook, or other functional and useful document free in the sense of freedom: to assure everyone the effective freedom to copy and redistribute it, with or without modifying it, either commercially or noncommercially. Secondarily, this License preserves for the author and publisher a way to get credit for their work, while not being considered responsible for modifications made by others.

This License is a kind of “copyleft”, which means that derivative works of the document must themselves be free in the same sense. It complements the GNU General Public License, which is a copyleft license designed for free software.

We have designed this License in order to use it for manuals for free software, because free software needs free documentation: a free program should come with manuals providing the same freedoms that the software does. But this License is not limited to software manuals; it can be used for any textual work, regardless of subject matter or whether it is published as a printed book. We recommend this License principally for works whose purpose is instruction or reference.

1. APPLICABILITY AND DEFINITIONS

This License applies to any manual or other work, in any medium, that contains a notice placed by the copyright holder saying it can be distributed under the terms of this License. Such a notice grants a world-wide, royalty-free license, unlimited in duration, to use that work under the conditions stated herein. The “Document”, below, refers to any such manual or work. Any member of the public is a licensee, and is addressed as “you”. You accept the license if you copy, modify or distribute the work in a way requiring permission under copyright law.

A “Modified Version” of the Document means any work containing the Document or a portion of it, either copied verbatim, or with modifications and/or translated into another language.

A “Secondary Section” is a named appendix or a front-matter section of the Document that deals exclusively with the relationship of the publishers or authors of the Document to the Document’s overall subject (or to related matters) and contains nothing that could fall directly within that overall subject. (Thus, if the Document is in part a textbook of mathematics, a Secondary Section may not explain any mathematics.) The relationship could be a matter of historical connection with the subject or with related matters, or of legal, commercial, philosophical, ethical or political position regarding them.

The “Invariant Sections” are certain Secondary Sections whose titles are designated, as being those of Invariant Sections, in the notice that says that the Document is released under this License. If a section does not fit the above definition of Secondary then it is not allowed to be designated as Invariant. The Document may contain zero Invariant Sections. If the Document does not identify any Invariant Sections then there are none.

The “Cover Texts” are certain short passages of text that are listed, as Front-Cover Texts or Back-Cover Texts, in the notice that says that the Document is released under this License. A Front-Cover Text may be at most 5 words, and a Back-Cover Text may be at most 25 words.
A “Transparent” copy of the Document means a machine-readable copy, represented in a format whose specification is available to the general public, that is suitable for revising the document straightforwardly with generic text editors or (for images composed of pixels) generic paint programs or (for drawings) some widely available drawing editor, and that is suitable for input to text formatters or for automatic translation to a variety of formats suitable for input to text formatters. A copy made in an otherwise Transparent file format whose markup, or absence of markup, has been arranged to thwart or discourage subsequent modification by readers is not Transparent. An image format is not Transparent if used for any substantial amount of text. A copy that is not “Transparent” is called “Opaque”.

Examples of suitable formats for Transparent copies include plain ASCII without markup, Texinfo input format, LaTeX input format, SGML or XML using a publicly available DTD, and standard-conforming simple HTML, PostScript or PDF designed for human modification. Examples of transparent image formats include PNG, XCF and JPG. Opaque formats include proprietary formats that can be read and edited only by proprietary word processors, SGML or XML for which the DTD and/or processing tools are not generally available, and the machine-generated HTML, PostScript or PDF produced by some word processors for output purposes only.

The “Title Page” means, for a printed book, the title page itself, plus such following pages as are needed to hold, legibly, the material this License requires to appear in the title page. For works in formats which do not have any title page as such, “Title Page” means the text near the most prominent appearance of the work’s title, preceding the beginning of the body of the text.

The “publisher” means any person or entity that distributes copies of the Document to the public.

A section “Entitled XYZ” means a named subunit of the Document whose title either is precisely XYZ or contains XYZ in parentheses following text that translates XYZ in another language. (Here XYZ stands for a specific section name mentioned below, such as “Acknowledgements”, “Dedications”, “Endorsements”, or “History”.) To “Preserve the Title” of such a section when you modify the Document means that it remains a section “Entitled XYZ” according to this definition.

The Document may include Warranty Disclaimers next to the notice which states that this License applies to the Document. These Warranty Disclaimers are considered to be included by reference in this License, but only as regards disclaiming warranties: any other implication that these Warranty Disclaimers may have is void and has no effect on the meaning of this License.

2. VERBATIM COPYING

You may copy and distribute the Document in any medium, either commercially or noncommercially, provided that this License, the copyright notices, and the license notice saying this License applies to the Document are reproduced in all copies, and that you add no other conditions whatsoever to those of this License. You may not use technical measures to obstruct or control the reading or further copying of the copies you make or distribute. However, you may accept compensation in exchange for copies. If you distribute a large enough number of copies you must also follow the conditions in section 3.

You may also lend copies, under the same conditions stated above, and you may publicly display copies.

3. COPYING IN QUANTITY

If you publish printed copies (or copies in media that commonly have printed covers) of the Document, numbering more than 100, and the Document’s license notice requires Cover Texts, you must enclose the copies in covers that carry, clearly and legibly, all these Cover Texts: Front-Cover Texts on the front cover, and Back-Cover Texts on the back cover. Both
covers must also clearly and legibly identify you as the publisher of these copies. The front cover must present the full title with all words of the title equally prominent and visible. You may add other material on the covers in addition. Copying with changes limited to the covers, as long as they preserve the title of the Document and satisfy these conditions, can be treated as verbatim copying in other respects.

If the required texts for either cover are too voluminous to fit legibly, you should put the first ones listed (as many as fit reasonably) on the actual cover, and continue the rest onto adjacent pages.

If you publish or distribute Opaque copies of the Document numbering more than 100, you must either include a machine-readable Transparent copy along with each Opaque copy, or state in or with each Opaque copy a computer-network location from which the general network-using public has access to download using public-standard network protocols a complete Transparent copy of the Document, free of added material. If you use the latter option, you must take reasonably prudent steps, when you begin distribution of Opaque copies in quantity, to ensure that this Transparent copy will remain thus accessible at the stated location until at least one year after the last time you distribute an Opaque copy (directly or through your agents or retailers) of that edition to the public.

It is requested, but not required, that you contact the authors of the Document well before redistributing any large number of copies, to give them a chance to provide you with an updated version of the Document.

4. MODIFICATIONS

You may copy and distribute a Modified Version of the Document under the conditions of sections 2 and 3 above, provided that you release the Modified Version under precisely this License, with the Modified Version filling the role of the Document, thus licensing distribution and modification of the Modified Version to whoever possesses a copy of it. In addition, you must do these things in the Modified Version:

A. Use in the Title Page (and on the covers, if any) a title distinct from that of the Document, and from those of previous versions (which should, if there were any, be listed in the History section of the Document). You may use the same title as a previous version if the original publisher of that version gives permission.

B. List on the Title Page, as authors, one or more persons or entities responsible for authorship of the modifications in the Modified Version, together with at least five of the principal authors of the Document (all of its principal authors, if it has fewer than five), unless they release you from this requirement.

C. State on the Title page the name of the publisher of the Modified Version, as the publisher.

D. Preserve all the copyright notices of the Document.

E. Add an appropriate copyright notice for your modifications adjacent to the other copyright notices.

F. Include, immediately after the copyright notices, a license notice giving the public permission to use the Modified Version under the terms of this License, in the form shown in the Addendum below.

G. Preserve in that license notice the full lists of Invariant Sections and required Cover Texts given in the Document’s license notice.

H. Include an unaltered copy of this License.

I. Preserve the section Entitled “History”, Preserve its Title, and add to it an item stating at least the title, year, new authors, and publisher of the Modified Version as given on the Title Page. If there is no section Entitled “History” in the Document, create one stating the title, year, authors, and publisher of the Document as given on its
Title Page, then add an item describing the Modified Version as stated in the previous sentence.

J. Preserve the network location, if any, given in the Document for public access to a Transparent copy of the Document, and likewise the network locations given in the Document for previous versions it was based on. These may be placed in the “History” section. You may omit a network location for a work that was published at least four years before the Document itself, or if the original publisher of the version it refers to gives permission.

K. For any section Entitled “Acknowledgements” or “Dedications”, Preserve the Title of the section, and preserve in the section all the substance and tone of each of the contributor acknowledgements and/or dedications given therein.

L. Preserve all the Invariant Sections of the Document, unaltered in their text and in their titles. Section numbers or the equivalent are not considered part of the section titles.

M. Delete any section Entitled “Endorsements”. Such a section may not be included in the Modified Version.

N. Do not retitle any existing section to be Entitled “Endorsements” or to conflict in title with any Invariant Section.

O. Preserve any Warranty Disclaimers.

If the Modified Version includes new front-matter sections or appendices that qualify as Secondary Sections and contain no material copied from the Document, you may at your option designate some or all of these sections as invariant. To do this, add their titles to the list of Invariant Sections in the Modified Version’s license notice. These titles must be distinct from any other section titles.

You may add a section Entitled “Endorsements”, provided it contains nothing but endorsements of your Modified Version by various parties—for example, statements of peer review or that the text has been approved by an organization as the authoritative definition of a standard.

You may add a passage of up to five words as a Front-Cover Text, and a passage of up to 25 words as a Back-Cover Text, to the end of the list of Cover Texts in the Modified Version. Only one passage of Front-Cover Text and one of Back-Cover Text may be added by (or through arrangements made by) any one entity. If the Document already includes a cover text for the same cover, previously added by you or by arrangement made by the same entity you are acting on behalf of, you may not add another; but you may replace the old one, on explicit permission from the previous publisher that added the old one.

The author(s) and publisher(s) of the Document do not by this License give permission to use their names for publicity for or to assert or imply endorsement of any Modified Version.

5. COMBINING DOCUMENTS

You may combine the Document with other documents released under this License, under the terms defined in section 4 above for modified versions, provided that you include in the combination all of the Invariant Sections of all of the original documents, unmodified, and list them all as Invariant Sections of your combined work in its license notice, and that you preserve all their Warranty Disclaimers.

The combined work need only contain one copy of this License, and multiple identical Invariant Sections may be replaced with a single copy. If there are multiple Invariant Sections with the same name but different contents, make the title of each such section unique by adding at the end of it, in parentheses, the name of the original author or publisher of that section if known, or else a unique number. Make the same adjustment to the section titles in the list of Invariant Sections in the license notice of the combined work.
In the combination, you must combine any sections Entitled “History” in the various original documents, forming one section Entitled “History”; likewise combine any sections Entitled “Acknowledgements”, and any sections Entitled “Dedications”. You must delete all sections Entitled “Endorsements.”

6. COLLECTIONS OF DOCUMENTS
You may make a collection consisting of the Document and other documents released under this License, and replace the individual copies of this License in the various documents with a single copy that is included in the collection, provided that you follow the rules of this License for verbatim copying of each of the documents in all other respects.

You may extract a single document from such a collection, and distribute it individually under this License, provided you insert a copy of this License into the extracted document, and follow this License in all other respects regarding verbatim copying of that document.

7. AGGREGATION WITH INDEPENDENT WORKS
A compilation of the Document or its derivatives with other separate and independent documents or works, in or on a volume of a storage or distribution medium, is called an “aggregate” if the copyright resulting from the compilation is not used to limit the legal rights of the compilation’s users beyond what the individual works permit. When the Document is included in an aggregate, this License does not apply to the other works in the aggregate which are not themselves derivative works of the Document.

If the Cover Text requirement of section 3 is applicable to these copies of the Document, then if the Document is less than one half of the entire aggregate, the Document’s Cover Texts may be placed on covers that bracket the Document within the aggregate, or the electronic equivalent of covers if the Document is in electronic form. Otherwise they must appear on printed covers that bracket the whole aggregate.

8. TRANSLATION
Translation is considered a kind of modification, so you may distribute translations of the Document under the terms of section 4. Replacing Invariant Sections with translations requires special permission from their copyright holders, but you may include translations of some or all Invariant Sections in addition to the original versions of these Invariant Sections. You may include a translation of this License, and all the license notices in the Document, and any Warranty Disclaimers, provided that you also include the original English version of this License and the original versions of those notices and disclaimers. In case of a disagreement between the translation and the original version of this License or a notice or disclaimer, the original version will prevail.

If a section in the Document is Entitled “Acknowledgements”, “Dedications”, or “History”, the requirement (section 4) to Preserve its Title (section 1) will typically require changing the actual title.

9. TERMINATION
You may not copy, modify, sublicense, or distribute the Document except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense, or distribute it is void, and will automatically terminate your rights under this License.

However, if you cease all violation of this License, then your license from a particular copyright holder is reinstated (a) provisionally, unless and until the copyright holder explicitly and finally terminates your license, and (b) permanently, if the copyright holder fails to notify you of the violation by some reasonable means prior to 60 days after the cessation.

Moreover, your license from a particular copyright holder is reinstated permanently if the copyright holder notifies you of the violation by some reasonable means, this is the first time you have received notice of violation of this License (for any work) from that copyright holder, and you cure the violation prior to 30 days after your receipt of the notice.
Termination of your rights under this section does not terminate the licenses of parties who have received copies or rights from you under this License. If your rights have been terminated and not permanently reinstated, receipt of a copy of some or all of the same material does not give you any rights to use it.

10. FUTURE REVISIONS OF THIS LICENSE

The Free Software Foundation may publish new, revised versions of the GNU Free Documentation License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns. See https://www.gnu.org/licenses/.

Each version of the License is given a distinguishing version number. If the Document specifies that a particular numbered version of this License “or any later version” applies to it, you have the option of following the terms and conditions either of that specified version or of any later version that has been published (not as a draft) by the Free Software Foundation. If the Document does not specify a version number of this License, you may choose any version ever published (not as a draft) by the Free Software Foundation. If the Document specifies that a proxy can decide which future versions of this License can be used, that proxy’s public statement of acceptance of a version permanently authorizes you to choose that version for the Document.

11. RELICENSING

“Massive Multiauthor Collaboration Site” (or “MMC Site”) means any World Wide Web server that publishes copyrightable works and also provides prominent facilities for anybody to edit those works. A public wiki that anybody can edit is an example of such a server. A “Massive Multiauthor Collaboration” (or “MMC”) contained in the site means any set of copyrightable works thus published on the MMC site.

“CC-BY-SA” means the Creative Commons Attribution-Share Alike 3.0 license published by Creative Commons Corporation, a not-for-profit corporation with a principal place of business in San Francisco, California, as well as future copyleft versions of that license published by that same organization.

“Incorporate” means to publish or republish a Document, in whole or in part, as part of another Document.

An MMC is “eligible for relicensing” if it is licensed under this License, and if all works that were first published under this License somewhere other than this MMC, and subsequently incorporated in whole or in part into the MMC, (1) had no cover texts or invariant sections, and (2) were thus incorporated prior to November 1, 2008.

The operator of an MMC Site may republish an MMC contained in the site under CC-BY-SA on the same site at any time before August 1, 2009, provided the MMC is eligible for relicensing.
ADDENDUM: How to use this License for your documents

To use this License in a document you have written, include a copy of the License in the document and put the following copyright and license notices just after the title page:

Copyright (C) year your name.
Permission is granted to copy, distribute and/or modify this document under the terms of the GNU Free Documentation License, Version 1.3 or any later version published by the Free Software Foundation; with no Invariant Sections, no Front-Cover Texts, and no Back-Cover Texts. A copy of the license is included in the section entitled "GNU Free Documentation License".

If you have Invariant Sections, Front-Cover Texts and Back-Cover Texts, replace the "with... Texts." line with this:

with the Invariant Sections being list their titles, with the Front-Cover Texts being list, and with the Back-Cover Texts being list.

If you have Invariant Sections without Cover Texts, or some other combination of the three, merge those two alternatives to suit the situation.

If your document contains nontrivial examples of program code, we recommend releasing these examples in parallel under your choice of free software license, such as the GNU General Public License, to permit their use in free software.
Appendix D  LilyPond command index

This index lists all the LilyPond commands and keywords with links to those sections of the manual that describe or discuss their use.

Appendix E LilyPond index

In addition to all the LilyPond commands and keywords, this index lists musical terms and words that relate to each of them, with links to those sections of the manual that describe or discuss that topic.

Slanted index entries point to locations (mostly ‘See also’ sections) that contain external links to other LilyPond documentation files like the Internal Reference or the Glossary.
