

'+.1y'

Introduction

This document presents proofs for LilyPond 2.10.0. When the text corresponds with the shown notation, we consider LilyPond Officially BugFree (tm). This document is intended for finding bugs and for documenting bugfixes.

In the web version of this document, you can click on the file name or figure for each example to see the corresponding input file.

TODO: order of tests (file names!), test only one feature per test. Smaller and neater tests.

(left blank intentionally)

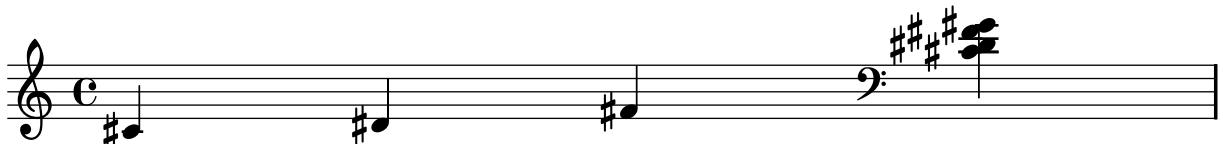

'accidental-cautionary.ly'

Cautionary accidentals are indicated using either parentheses (default) or smaller accidentals.

'accidental-clef-change.ly'

Accidentals are reset for clef changes.

'accidental-double.ly'

If two forced accidentals happen at the same time, only one sharp sign is printed.

'accidental-forced-tie.ly'

Accidentals can be forced with ! and ? even if the notes are tied.

'accidental-ledger.ly'

Ledger lines are shortened when there are accidentals. This happens only for the single ledger line close to the note head, and only if the accidental is horizontally close to the head.

'accidental-octave.ly'

This shows how accidentals in different octaves are handled. The note names are also automatically printed but the octavation has been dropped out.

A musical staff in treble clef and A major (two sharps). It shows a sequence of notes: gis, g, g, gis, gis, g, g, gis, g, gis, g. Below each note is its name: gis, g, g, gis, gis, g, g, gis, g, gis, g.

A continuation of the musical staff. It shows a sequence of notes: fis, f, f, fis, fis, f, f, fis, f, fis, f. Below each note is its name: fis, f, f, fis, fis, f, f, fis, f, fis, f.

'accidental-piano.ly'

In piano accidental style, notes in both staves influence each other. In this example, each note should have an accidental.

Two staves of music. The top staff is in C minor (one flat) and the bottom staff is in C major (no sharps or flats). The notes are: C, B, B, C, and B. The bottom staff has a repeat sign and the notes are: C, G, #F, #G, #F.

'accidental-placement.ly'

Accidentals are placed as closely as possible. Accidentals in corresponding octaves are aligned. The top accidental should be nearest to the chord. The flats in a sixth should be staggered.

A single staff of music in C major (no sharps or flats). It shows a sequence of chords: C major, G major, D major, A major, E major, B major, F# major, C major, G major, D major, A major, E major, B major. The accidentals are placed as closely as possible to the notes they affect.

A single staff of music in C major (no sharps or flats). It shows a sequence of chords: C major, G major, D major, A major, E major, B major, F# major, C major, G major, D major, A major, E major, B major. The accidentals are placed as closely as possible to the notes they affect.

'accidental-quarter.ly'

Quarter tone notation is supported, including threequarters flat.

A single staff of music in 12/4 time. It shows a sequence of notes: two flats, one flat, one sharp, one flat. The time signature changes to 4/4 at the end.

'accidental-single-double.ly'

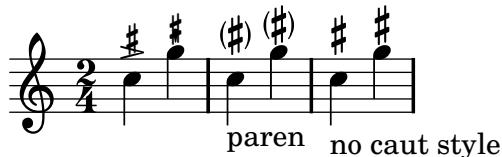

A sharp sign after a double sharp sign, as well as a flat sign after a double flat sign is automatically prepended with a natural sign.

gis is gis gis ges

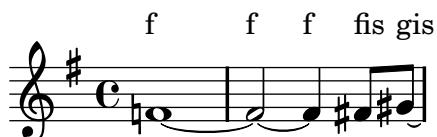

'accidental-suggestions.ly'

setting the `suggestAccidentals` will print accidentals vertically relative to the note. This is useful for denoting Musica Ficta.

'accidental-tie.ly'

The second and third notes should not get accidentals, 6 because they are tied to a note. However, an accidental is present if the line is broken at the tie, which happens for the G sharp.

'accidental-unbroken-tie-spacing.ly'

Tied accidentaled notes (which cause reminder accidentals) do not wreak havoc in the spacing when unbroken.

'accidental-voice.ly'

This shows how modern cross voice auto cautionary accidentals are handled. The first two fisses get accidentals because they belong to different voices. The first f gets cautionary natural because of previous measure. The last f gets cautionary natural because fis was only in the other voice.

A musical staff in common time with a treble clef. It contains two measures. The first measure has notes labeled 'fis' and 'a'. Below the staff, the notes are labeled 'c' and 'fis'. The second measure has notes labeled 'f' and 'fis'. Below the staff, the notes are labeled 'f', 'c', and 'f'. There are forced accidentals (sharps) on the second note of each measure, and courtesy accidentals (sharps) on the third and fourth notes.

'accidentally'

Accidentals work: the second note does not get a sharp. The third and fourth show forced and courtesy accidentals.

A musical staff in common time with a treble clef. It contains four measures. The first measure has a note labeled 'force'. Below the staff, the note is labeled 'dis'. The second measure has a note labeled 'dis'. Below the staff, the note is labeled 'dis'. The third measure has a note labeled 'dis'. Below the staff, the note is labeled 'dis'. The fourth measure has a note labeled 'dis'. Below the staff, the note is labeled 'dis'.

'alignment-order.ly'

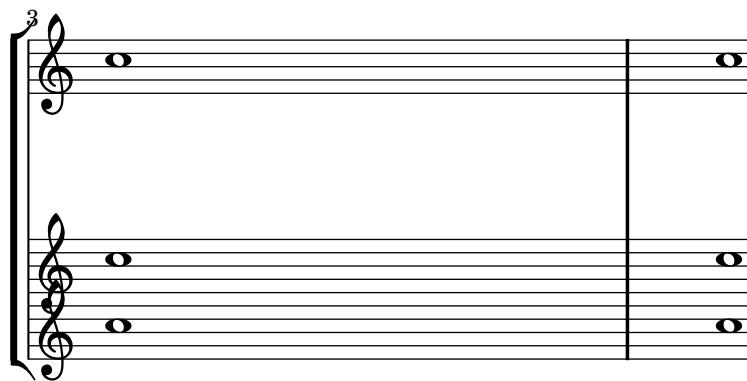

Newly created contexts can be inserted anywhere in the vertical alignment.

Four staves in common time with a treble clef, illustrating different vertical alignments:

- The first staff shows three notes aligned "below first staff".
- The second staff shows three notes aligned "this abovestaff".
- The third staff shows six eighth notes aligned "staff last". A bracket above the staff indicates a length of "6".
- The fourth staff shows three notes aligned "below first staff".

'alignment-vertical-manual-setting.ly'

Alignments may be changed pre system by setting `alignment-offsets` in the `line-break-system-details` property

'alignment-vertical-spacing.ly'

By setting properties in `NonMusicalPaperColumn`, vertical spacing of alignments can be adjusted per system.

By setting `alignment-extra-space` or `fixed-alignment-extra-space` an individual system may be stretched vertically.

For technical reasons, `overrideProperty` has to be used for setting properties on individual object. `\override` in a `\context` block may still be used for global overrides.

piano

normal

pn

fixed-alignment-extra-space

pn

aligned-alignment-extra-space

'ambitus.ly'

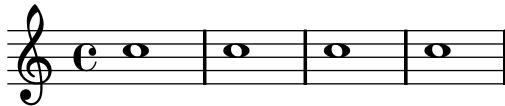

Ambitususes indicate pitch ranges for voices.

Accidentals only show up if they're not part of key signature. `AmbitusNoteHead` grobs also have ledger lines.

'apply-context.ly'

With `\applyContext`, `\properties` can be modified procedurally. Applications include: checking bar numbers, smart octavation.

This example prints a bar-number during processing on stdout.

'apply-output.ly'

The `\applyOutput` expression is the most flexible way to tune properties for individual grobs. Here, the layout of a note head is changed depending on its vertical position.

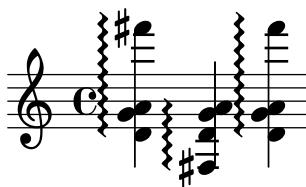

'arpeggio-bracket.ly'

A square bracket on the left indicates that the player should not arpeggiate the chord.

'arpeggio-collision.ly'

Arpeggio stays clear of accidentals and flipped note heads.

'arpeggio.ly'

Arpeggios are supported, both cross-staff and broken single staff.

A musical score with two staves. The top staff is in treble clef and the bottom staff is in bass clef, both in C major. An arpeggio is shown crossing between the two staves.

`'auto-beam-bar.ly'`

No auto beams will be put over (manual) repeat bars.

`'auto-beam-no-beam.ly'`

The autobeamer may be switched off for a single note with `\noBeam`.

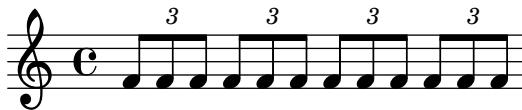

`'auto-beam-triplet.ly'`

Automatic beaming is also done on tuplets.

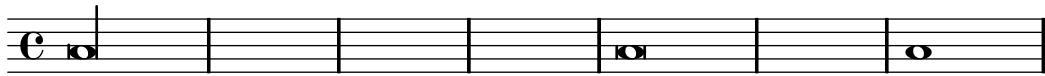

`'auto-beam-tuplets.ly'`

Tuplet-spanner should not put (visible) brackets on beams even if they're auto generated.

`'auto-beam.ly'`

Beams are placed automatically; the last measure should have a single beam.

8

‘auto-change.ly’

Auto change piano staff switches voices between up and down staves automatically rests are switched along with the coming note. When central C is reached, staff is not yet switched (by default).

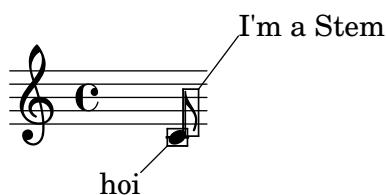

‘backend-exercise.ly’

Excercise all output functions

‘balloon.ly’

With balloon texts, objects in the output can be marked, with lines and explanatory text added.

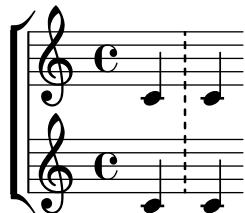

‘bar-check-redefine.ly’

The meaning of | is stored in the identifier pipeSymbol.

'bar-line-dashed.ly'

The dashes in a dashed bar line covers staff lines exactly. Dashed barlines between staves start and end on a half dash precisely.

'bar-number.ly'

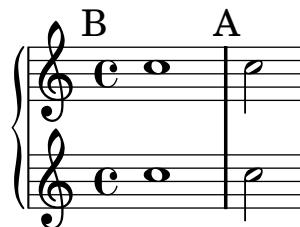

Bar number may be set and their padding adjusted individually. The counting of bar numbers is started after the anacrusis.

To prevent clashes at the beginning of a line, the padding may have to be increased.

99999 100000 100001
2 3

'bar-scripts.ly'

Markings can be attached to (invisible) barlines.

'beam-auto-knee.ly'

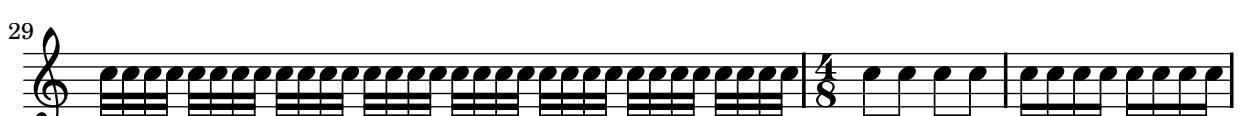

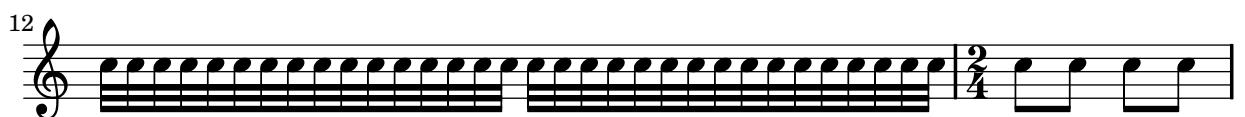

A knee is made automatically when a horizontal beam fits in a gap between note heads that is larger than a predefined threshold.

'beam-auto.ly'

There are presets for the `auto-beam` engraver in the case of common time signatures.

‘beam-beat-grouping.ly’

Beaming patterns obey the `beatGrouping` property.

‘beam-break.ly’

Beams can be printed across line breaks, if forced.

‘beam-center-slope.ly’

Simple beams on middle staffline are allowed to be slightly sloped, even if the notes have ledgers. Beams reaching beyond middle line can have bigger slope.

‘beam-concave-damped.ly’

Beams that are not strictly concave are damped according to their concaveness.

‘beam-concave.ly’

Fully concave beams should be horizontal. Informally spoken, concave refers to the shape of the notes that are opposite a beam. If an up-beam has high notes on its center stems, then we call it concave.

If a beam fails a test, the desired slope is printed next to it.

The image shows three staves of musical notation. The first staff begins at measure 8, indicated by a large '8' above the clef. It consists of two measures of eighth-note pairs followed by a repeat sign. The second staff begins at measure 15, indicated by a large '15' above the clef. It consists of four measures of eighth-note pairs. The third staff begins at measure 20, indicated by a large '20' above the clef. It consists of three measures of eighth-note pairs.

'beam-cross-staff-auto-knee.ly'

Automatic cross-staff knees work also (here they were produced with explicit staff switches).

'beam-cross-staff-slope.ly'

Cross staff (kneed) beams do not cause extreme slopes.

A musical score for piano, featuring two staves. The top staff is in Treble clef and 3/8 time, with a key signature of one sharp. It contains three measures of music, with the third measure ending on a dotted half note. The bottom staff is in Bass clef and 3/8 time, with a key signature of one sharp. It also contains three measures of music, with the third measure ending on a dotted half note. The music consists of eighth and sixteenth note patterns.

'beam-cross-staff.ly'

Beams can be typeset over fixed distance aligned staves, beam beautification does not really work, but knees do. Beams should be behave well, wherever the switching point is.

A musical score for piano, featuring two staves. The top staff is in treble clef and the bottom staff is in bass clef. Measure 1 starts with a forte dynamic and consists of eighth-note chords in G major. Measure 2 begins with a half note followed by eighth-note chords. Measure 3 features eighth-note chords and a fermata over the third note. Measure 4 concludes with eighth-note chords.

`'beam-damp.ly'`

Beams are less steep than the notes they encompass.

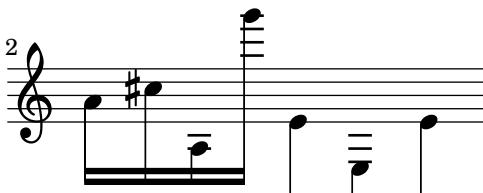

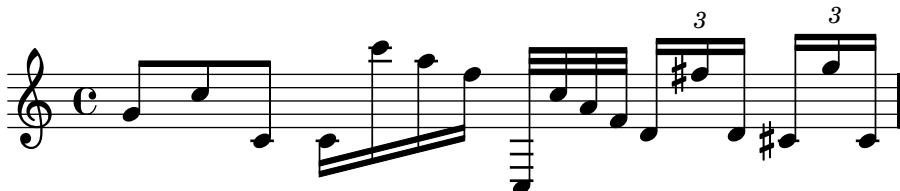

`'beam-default-lengths.ly'`

Beamed stems have standard lengths if possible. Quantization is switched off in this example.

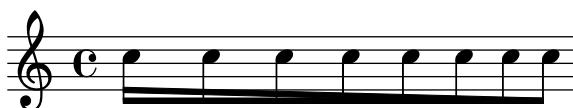

`'beam-extreme.ly'`

Beams should behave reasonably well, even under extreme circumstances. Stems may be short, but noteheads should never touch the beam. Note that under normal circumstances, these beams would get knees here `Beam.auto-knee-gap` was set to false.

`'beam-feather.ly'`

Specifying `grow-direction` on a beam, will cause feathered beaming. The `\featherDurations` function can be used to adjust note durations.

`'beam-french.ly'`

In french style beaming, the stems do not go between beams.

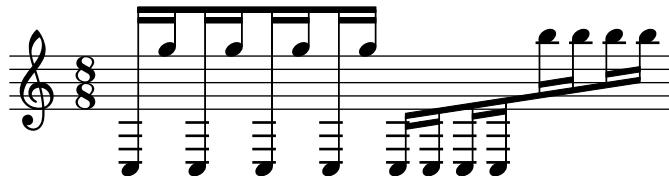

`'beam-funky-beamlet.ly'`

Funky kneed beams with beamlets also work. The beamlets should be pointing to the note head.

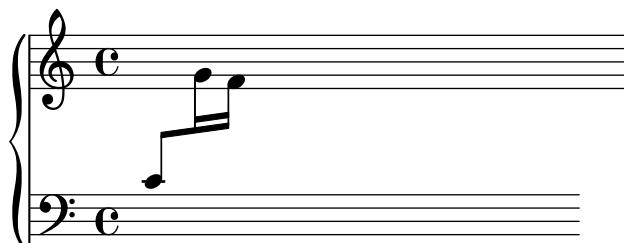

`'beam-funky.ly'`

In complex configurations of knee beaming, according to Paul Roberts, the first stem of a beam determines the direction of the beam, and as such the way that following (kneed) stems attach to the beam. This is in disagreement with the current algorithm.

`'beam-isknee.ly'`

Beams can be placed across a PianoStaff.

`'beam-knee-symmetry.ly'`

Point-symmetric beams should receive the same quantizing. There is no up/down bias in the quantizing code.

`'beam-length.ly'`

Beams should look the same.

`'beam-manual-beaming.ly'`

Beaming can be overridden for individual stems.

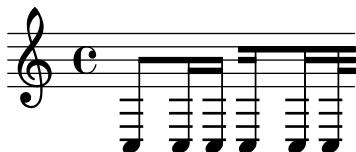

`'beam-multiple-cross-staff.ly'`

Kneed beams (often happens with cross-staff beams) should look good when there are multiple beams: all the beams should go on continuously at the staff change. Stems in both staves reach up to the last beam.

A two-staff system in common time. The top staff has a treble clef and the bottom staff has a bass clef. Both staves begin with eighth notes. The first two notes on each staff are connected by a single horizontal beam. At the end of the first measure, the staff changes. The notes continue with beams that span both staves, ensuring a continuous flow across the barline.

`'beam-outside-beamlets.ly'`

Beams may overshoot stems. This is also controlled with `break-overshoot`.

`'beam-over-barline.ly'`

Explicit beams may cross barlines.

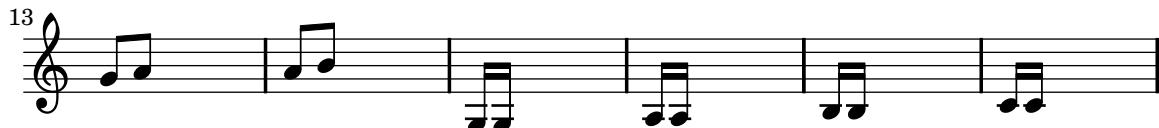

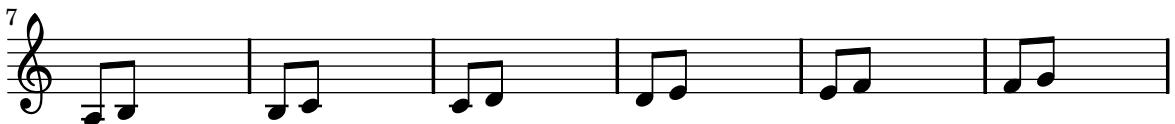

'beam-position.ly'

Beams on ledgered notes should always reach the middle staff line. The second beam counting from the note head side, should never be lower than the second staff line. This does not hold for grace note beams. Override with `no-stem-extend`.

'beam-quant-standard.ly'

This file tests a few standard beam quants, taken from Ted Ross' book. If LilyPond finds another quant, the correct quant is printed over the beam.

'beam-quanting-32nd.ly'

Stem lengths take precedence over beam quants: 'forbidden' quants are only avoided for 32nd beams when they are outside of the staff. However, that leads to very long stems, which is even worse.

'beam-quanting-horizontally'

In this test for beam quant positions for horizontal beams, staff lines should be covered in all cases. For 32nd beams, the free stem lengths are between 2 and 1.5.

'beam-quarter.ly'

Quarter notes may be beamed: the beam is halted momentarily.

'beam-rest.ly'

The number of beams does not change on a rest.

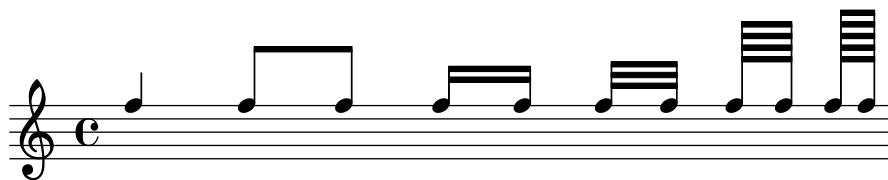

'beam-second.ly'

Engraving second intervals is tricky. We used to have problems with seconds being too steep, or getting too long stems. In a file like this, showing seconds, you'll spot something fishy very quickly.

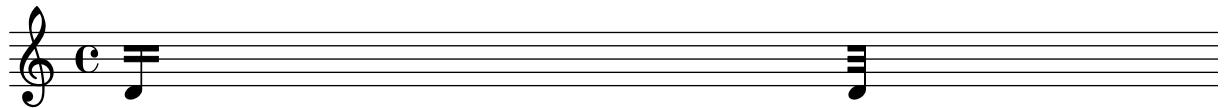

'beam-shortened-lengths.ly'

Beams in unnatural direction, have shortened stems, but do not look too short.

'beam-single-stem.ly'

Single stem beams are also allowed. For such beams, clip-edges is switched off automatically.

'beam-unconnected-beamlets.ly'

By setting `max-beam-connect`, it is possible to create pairs of unconnected beamlets.

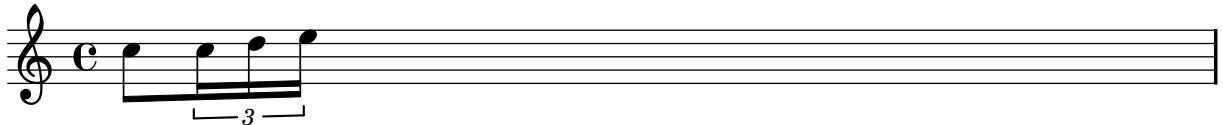

'beaming-ternary-metrum.ly'

Automatic beaming works also in ternary time sigs. In this case, the 8th is a beat, so the 16ths are split into two groups. This can be avoided by overriding `beatLength` to be 3 8th notes.

'beaming.ly'

Beaming is generated automatically. Beams may cross bar lines. In that case, line breaks are forbidden.

'beams.ly'

Beaming can be also given explicitly.

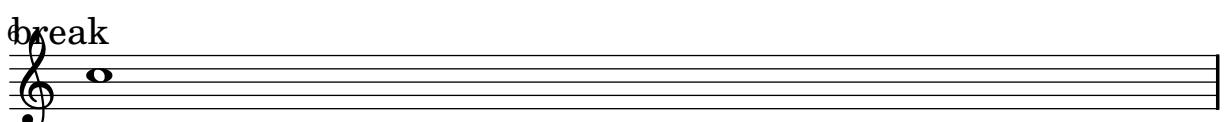

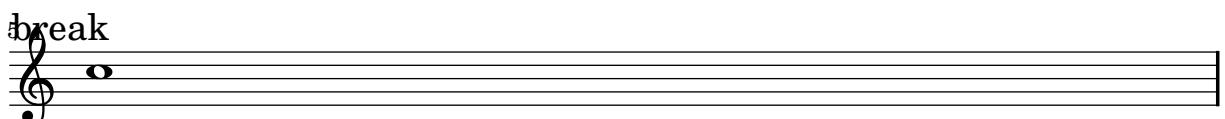

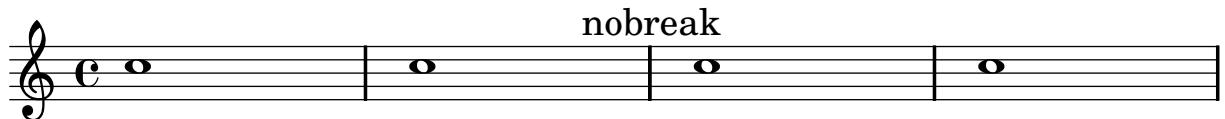

'bend-after.ly'

Falls and doits can be created with `bendAfter`. They run to the next note, or to the next barline.

'break.ly'

Breaks can be encouraged and discouraged using \break and \noBreak.

'breathing-sign-ancient.ly'

Gregorian chant notation sometimes also uses commas and ticks, but in smaller font size (we call it 'virgula' and 'caesura'). However, the most common breathing signs are divisio minima/maior/maxima and finalis, the latter three looking similar to bar glyphs.

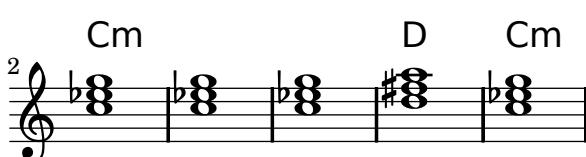

'breathing-sign.ly'

Breathing signs are available in different tastes: commas (default), ticks, vees and 'railroad tracks' (caesura).

'chord-changes.ly'

Property chordChanges: display chord names only when there's a change in the chords scheme, but always display the chord name after a line break.

7 Cm D

'chord-name-entry-11.ly'

The 11 is only added to major-13 if it is mentioned explicitly.

'chord-name-entry.ly'

Chords can be produced with the new chordname entry code (\chordmode mode), using a pitch and a suffix. Here, the suffixes are printed below pitches.

10

19

'chord-name-exceptions.ly'

The property `chordNameExceptions` can be used to store a list of special notations for specific chords.

'chord-name-major7.ly'

The layout of the major 7 can be tuned with `majorSevenSymbol`.

C^Δ

C^{j7}

'chord-names-bass.ly'

In ignatzek inversions, a note is dropped down to act as the bass note of the chord. Bass note may be also added explicitly. Above the staff: computed chord names. Below staff: entered chord name.

A musical staff in common time (indicated by 'c') and G major (indicated by a treble clef). The staff shows six chords, each consisting of three notes. Above the staff, the chords are labeled with their computed names: F^{\triangle}/E , F^{\triangle}/F , F^{\triangle}/G , F^{\triangle}/E , F^{\triangle}/F , and F^{\triangle}/G . Below the staff, the corresponding entered chord names are shown: ':maj7/e', ':maj7/f', ':maj7/g', ':maj7/+e', ':maj7/+f', and ':maj7/+g'. The bass note for each chord is indicated by a vertical line with a note head below it.

'chord-scripts.ly'

Scripts can also be attached to chord elements.

A musical staff in common time (indicated by 'c') and G major (indicated by a treble clef). The staff shows a sequence of chords. Above each chord, there is a small script symbol: a dot above the first chord, an arrow pointing up above the second, a vertical ellipsis above the third, an arrow pointing down above the fourth, an arrow pointing up above the fifth, and an arrow pointing up above the sixth. These symbols likely indicate specific note heads or voices within the chords.

'chord-tremolo-short.ly'

Tremolo repeats can be constructed for short tremolos (total duration smaller than 1/4) too. Only some of the beams are connected to the stems.

A musical staff in common time (indicated by 'c') and G major (indicated by a treble clef). The staff shows a short tremolo over two measures. The tremolo is indicated by a beam connecting two notes in each measure, with a repeat sign at the end of the first measure.

'chord-tremolo.ly'

Chord tremolos look like beams, but are a kind of repeat symbol. To avoid confusion, chord tremolo beams do not reach the stems, but leave a gap. Chord tremolo beams on half notes are not ambiguous, as half notes cannot appear in a regular beam, and should reach the stems.

In this example, each tremolo lasts exactly one measure.

(To ensure that the spacing engine is not confused we add some regular notes as well.)

A musical staff in common time (indicated by 'c') and G major (indicated by a treble clef). The staff shows a long tremolo across four measures. The tremolo is indicated by a beam connecting notes in each measure, with a repeat sign at the end of the first measure. The notes are half notes, which reach the stems.

A musical staff in common time (indicated by 'c') and G major (indicated by a treble clef). The staff shows a complex rhythmic pattern. The first measure has a 7/8 time signature. The second measure has a 2/4 time signature. The third measure has a 4/4 time signature. The fourth measure has a 3/4 time signature. The notes are eighth and sixteenth notes, with a tremolo effect indicated by a beam connecting notes in each measure.

‘chords-funky-ignatzek.ly’

Jazz chords may have unusual combinations.

A musical staff in C major with a treble clef. It contains five measures of chords: C^{sus4/sus2}, C^{sus4/sus2/add3}, C^{sus2/add3}, C^{b6/sus2/addb3}, and C^{11/sus4/sus2/add3}. Below this, another staff shows C^{7/sus4/sus2/add3/add8/add9/add10}, C^{7/add8/add9/add10}, C^{7/add6}, and C^{6/add9}.

‘clef-oct.ly’

Octavation signs may be added to clefs. These octavation signs may be placed below or above (meaning an octave higher or lower), and can take any value, including 15 for two octaves.

A musical staff in C major with a treble clef. The octavation signs are: 8, 15, 7, 6, 8, 15, 9. The notes are eighth notes.

‘clefs.ly’

Clefs with `full-size-change` should be typeset in full size. For octaviated clefs, the “8” should appear closely above or below the clef respectively.

Two rows of musical staves. The top row shows treble, french, soprano, mezzosoprano, alto, and tenor clefs with their respective octavation signs (8, 15, 7, 6, 8, 15). The bottom row shows baritone, varbaritone, bass, and subbass clefs with their respective octavation signs (7, 15, 8, 15).

‘clip-systems.ly’

Clipping snippets from a finished score

Notes:

- If system starts and ends are included, they include extents of the System grob, eg. instrument names.
- Grace notes at the end point of the region are not included
- Regions can span multiple systems. In this case, multiple EPS files are generated.

This file needs to be run separately with `-dclip-systems`; the collated-files.html of the regression test does not adequately show the results.

The result will be files named '`base-from-start-to-end [-count].eps`'.

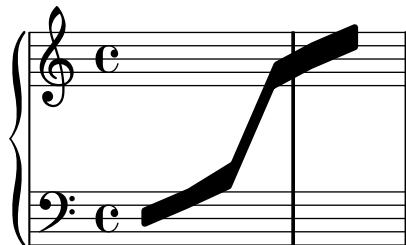

5

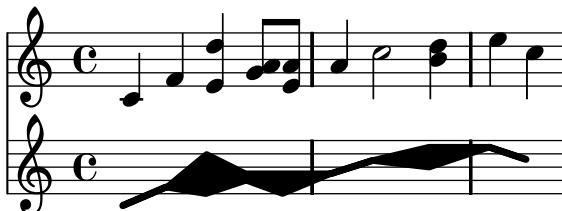

'cluster-cross-staff.ly'

Clusters can be written across staves.

'cluster.ly'

Clusters are a device to denote that a complete range of notes is to be played.

'collision-2.ly'

Single head notes may collide.

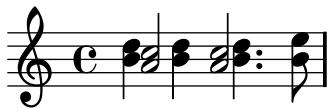

'collision-alignment.ly'

Notes in different staves should be aligned to the left-most note, in case of collisions.

`'collision-dots-invert.ly'`

When notes are colliding, the resolution depends on the dots: notes with dots should go to the right, if there could be confusion to which notes the dots belong.

`'collision-dots-move.ly'`

If collision resolution finds dotted note head must remain on left hand side, move dots to the right.

`'collision-dots.ly'`

Collision resolution tries to put notes with dots on the right side.

`'collision-head-chords.ly'`

Note heads in collisions should be merged if they have the same positions in the extreme note heads.

`'collision-heads.ly'`

Open and black note heads are not merged by default.

`'collision-merge-differently-dotted.ly'`

If `NoteCollision` has `merge-differently-dotted = ##t` note heads that have differing dot counts may be merged anyway. Dots should not disappear when merging similar note heads.

`'collision-merge-differently-headed.ly'`

If `merge-differently-headed` is enabled, then open note heads may be merged with black noteheads, but only if the black note heads are from 8th or shorter notes.

`'collision-merge-dots.ly'`

When merging heads, the dots are merged too.

`'collision-mesh.ly'`

Oppositely stemmed chords, meshing into each other, are resolved.

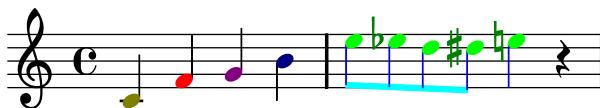

`'collisions.ly'`

In addition to normal collision rules, there is support for polyphony, where the collisions are avoided by shifting middle voices horizontally.

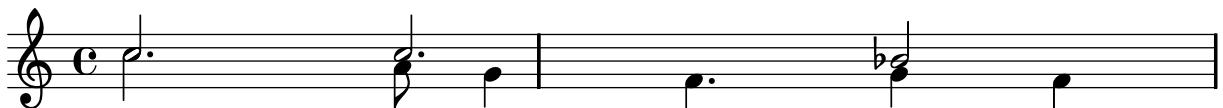

`'color.ly'`

Each grob can have a color assigned to it. Use the `\override` and `\revert` expressions to set the `color` property.

`'completion-heads-polyphony.ly'`

Completion heads are broken across bar lines. This was intended as a debugging tool, but it can be used to ease music entry. Completion heads are not fooled by polyphony with a different rhythm.

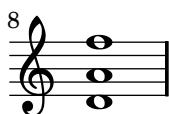

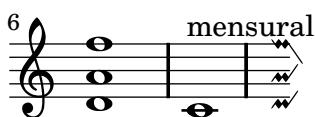

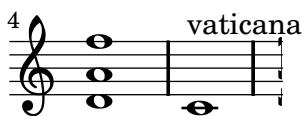

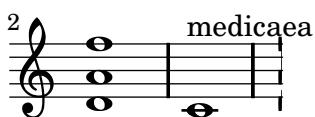

'completion-heads.ly'

If the `Note_heads_engraver` is replaced by the `Completion_heads_engraver`, notes that cross bar lines are split into tied notes.

'custos.ly'

Custodes may be engraved in various styles.

'dot-flag-collision.ly'

Dots move to the right when a collision with the (up)flag happens.

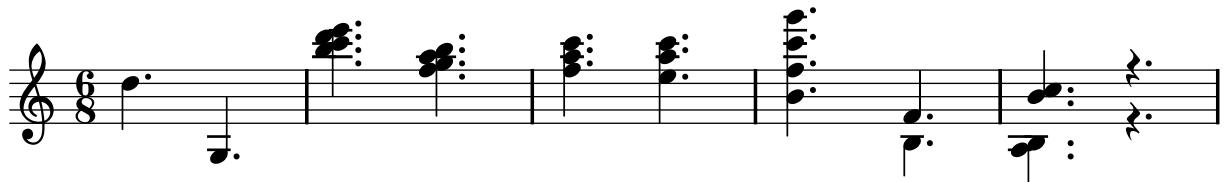

'dots.ly'

Noteheads can have dots, and rests too. Augmentation dots should never be printed on a staff line, but rather be shifted vertically. They should go up, but in case of multiple parts, the down stems have down shifted dots. In case of chords, all dots should be in a column. The dots follow the shift of rests when avoiding collisions.

The priorities to print the dots are (ranked in importance):

- keeping dots off staff lines,
- keeping dots close to their note heads,
- moving dots in the direction specified by the voice,
- moving dots up.

'drums.ly'

In drum notation, there is a special clef symbol, drums are placed to their own staff positions and have note heads according to the drum, an extra symbol may be attached to the drum, and the number of lines may be restricted.

timbales

drums

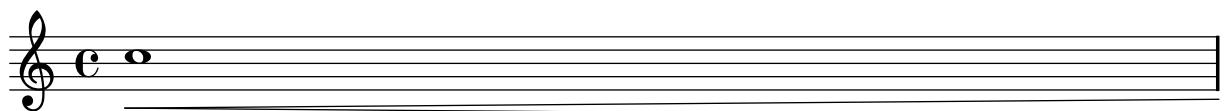

This block shows two staves. The top staff is for 'timbales' and the bottom for 'drums'. Both staves use a unique clef symbol. The drums staff includes labels for 'crash' and 'h.h.' (hi-hat) with specific note heads. The notation uses various symbols like dots, crosses, and dashes to represent different drum strokes and dynamics.

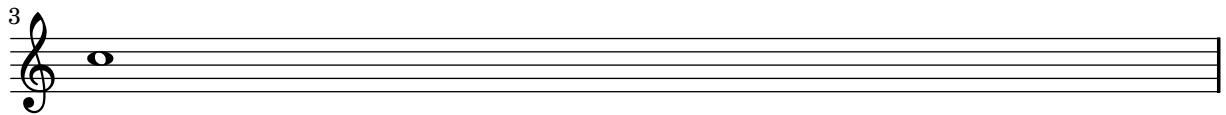

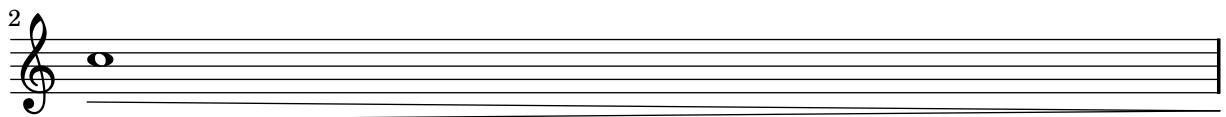

3

This block continues the drum notation from the previous page. It shows two staves: 'timbales' and 'drums'. The drums staff continues with 'crash' and 'h.h.' labels. The notation uses various symbols like dots, crosses, and dashes to represent different drum strokes and dynamics.

'dynamics-broken-hairpin.ly'

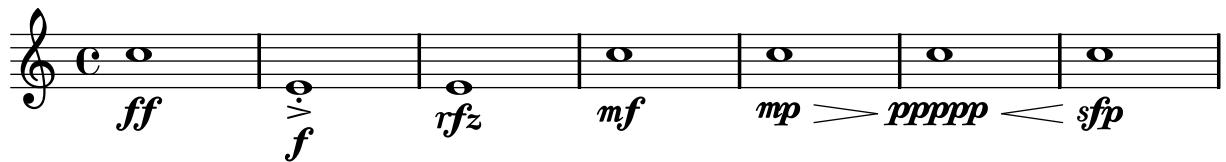

Broken crescendi should be open on one side.

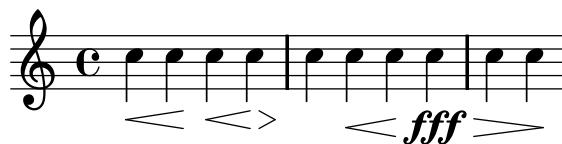

'dynamics-glyphs.ly'

Dynamic letters are kerned, and their weight matches that of the hairpin signs. The dynamic scripts should be horizontally centered on the note head. Scripts that should appear closer to the note head (staccato, accent) are reckoned with.

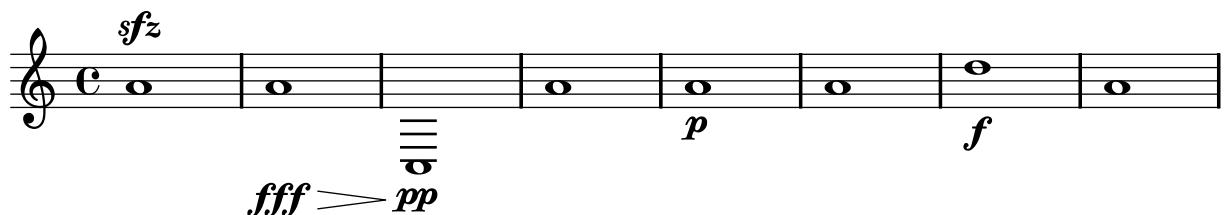

'dynamics-hairpin-length.ly'

Hairpins extend to the extremes of the bound if there is no adjacent hairpin of dynamic-text. If there is, the hairpin extends to the center of the column or the bound of the text respectively.

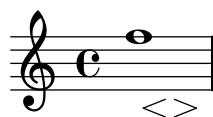

'dynamics-line.ly'

Dynamics appear below or above the staff. If multiple dynamics are linked with (de)crescendi, they should be on the same line. Isolated dynamics may be forced up or down.

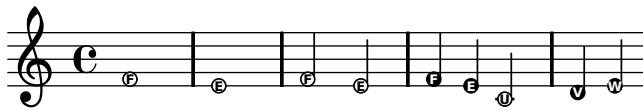

'dynamics-unbound-hairpin.ly'

Crescendi may start off-notes, however, they should not collapse into flat lines.

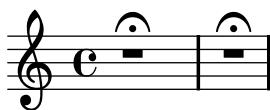

'easy-notation.ly'

Easy-notation (or Ez-notation) prints names in note heads. You also get ledger lines, of course.

'fermata-rest-position.ly'

Fermatas over multimeasure rests are positioned as over normal rests.

'figured-bass-continuation-center.ly'

Pairs of congruent figured bass extender lines are vertically centered if `figuredBassCenterContinuations` is set to true.

#6 6
4 —————
3

#6 6
4 —————
3 ————— **#3**

'figured-bass-continuation-forbid.ly'

By adorning a bass figure with `\!`, an extender may be forbidden.

'figured-bass-continuation.ly'

Figured bass extender lines run between repeated bass figures. They are switched on with `useBassFigureExtenders`

the same with extenders

#6 6 4
4 ————— **3** **#6 6**
4 —————
3 ————— **#3**

`'figured-bass-implicit.ly'`

Implicit bass figures are not printed, but they do get extenders.

normal extenders

implicit

`\bassFig{3}{3} \bassFig{3}{4} \bassFig{3}{4}`

`'figured-bass-staff.ly'`

Figured bass can also be added to Staff context directly. In that case, the figures must be entered with `\figuremode` and be directed to an existing Staff context.

Since these engravers are on Staff level, properties controlling figured bass should be set in Staff context.

`'figured-bass.ly'`

Figured bass is created by the FiguredBass context which responds to figured bass events and rest events. You must enter these using the special `\figuremode { }` mode, which allows you to type numbers, like `<4 6+>` and add slashes and pluses.

You can also enter markup strings. The vertical alignment may also be tuned.

3 +3 #3 3 3 3 V7
5 [5] 5 5 6 [bla]
7 7 5 7 6
[9]
[11] 7 8

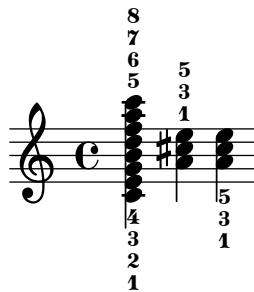

`'fill-line-test.ly'`

The fill-line markup command should align texts in columns. For example, the characters in the center should form one column.

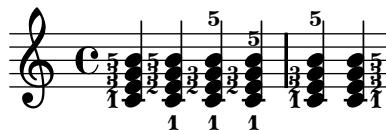

'finger-chords-order.ly'

Ordering of the fingerings depends on vertical ordering of the notes, and is independent of up/down direction.

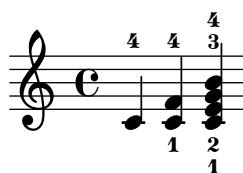

'finger-chords.ly'

With the new chord syntax, it is possible to associate fingerings uniquely with notes. This makes it possible to add horizontal fingerings to notes.

'fingering.ly'

Automatic fingering tries to put fingering instructions next to noteheads.

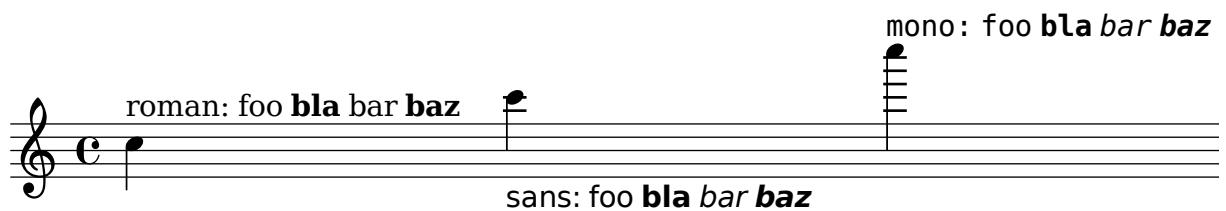

'follow-voice-break.ly'

The line-spanners connects to the Y position of the note on the next line. When put across line breaks, only the part before the line break is printed.

'font-family-override.ly'

The default font families for text can be overridden with `make-pango-font-tree`

'font-kern.ly'

Text set in TrueType Fonts that contain kerning tables, are kerned.

With kerning:

VAVAVA
VAVAVA

Without kerning:

`'font-name.ly'`

Other fonts can be used by setting `font-name` for the appropriate object. The string should be a Pango font description without size specification.

`Rest in LuxiMono`

This text is in large Vera Bold

`'font-postscript.ly'`

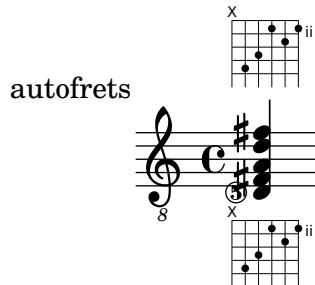

This file demonstrates how to load different (postscript) fonts. The file `'font.scm'` shows how to define the scheme-function `make-century-schoolbook-tree`.

This file should be run with the TeX and extra options should be passed to LaTe \backslash X and dvips to help it find the uncb font.

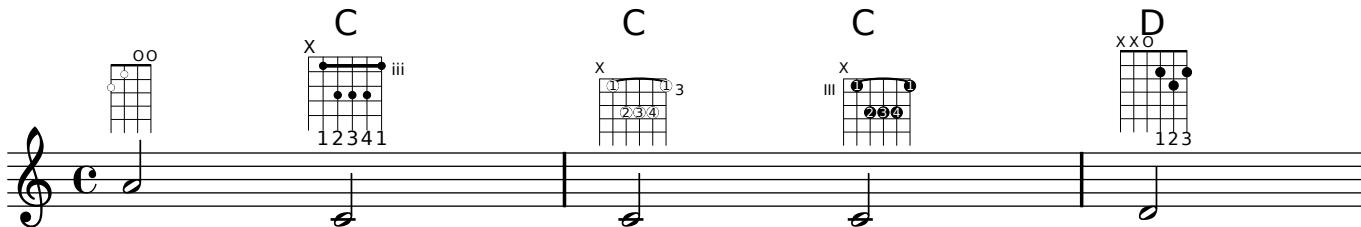

`'fret-boards.ly'`

Frets can be assigned automatically. The results will be best when one string number is indicated in advance

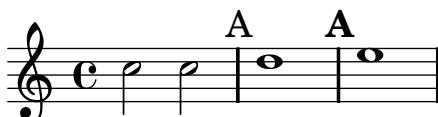

`'fret-diagrams.ly'`

`'generic-output-property.ly'`

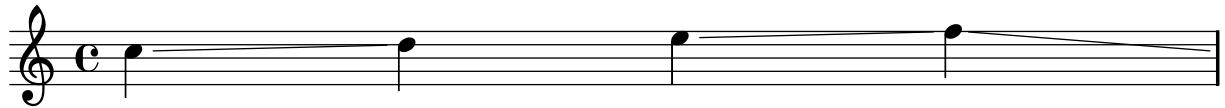

As a last resort, the placement of grobs can be adjusted manually, by setting the `extra-offset` of a grob.

'glissando.ly'

Between notes, there may be simple glissando lines. Here, the first two glissandi are not consecutive.

The engraver does no time-keeping, so it involves some trickery to get << { s8 s8 s4 } { c4 \gliss d4 } >> working correctly.

A musical staff in common time (indicated by 'C') with a treble clef. It contains several notes. There are two grace notes at the beginning of the staff, each with a wavy line extending from its top right to the start of a regular note. Following these are two groups of three notes each, separated by vertical bar lines. The first group has a wavy line from the first note to the second, and the second group has a wavy line from the first note to the second.

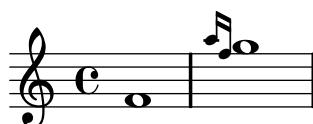

'grace-auto-beam.ly'

The autobeamer is not confused by grace notes.

'grace-bar-line.ly'

Bar line should come before the grace note.

'grace-bar-number.ly'

Grace notes do tricky things with timing. If a measure starts with a grace note, the measure does not start at 0, but earlier. Nevertheless, lily should not get confused. For example, line breaks should be possible at grace notes, and the bar number should be printed correctly.

'grace-beam.ly'

Grace beams and normal beams may occur simultaneously. Unbeamed grace notes are not put into normal beams.

'grace-end.ly'

Grace notes after the last note do not confuse the timing code.

'grace-nest.ly'

Grace code should not be confused by nested sequential musics, containing grace notes; practically speaking, this means that the end-bar and measure bar coincide in this example.

'grace-nest1.ly'

Grace code should not be confused by nested sequential musics, containing grace notes; practically speaking, this means that the end-bar and measure bar coincide in this example.

'grace-nest2.ly'

Grace code should not be confused by nested sequential musics, containing grace notes; practically speaking, this means that the end-bar and measure bar coincide in this example.

'grace-nest3.ly'

In nested syntax, graces are still properly handled.

'grace-nest4.ly'

Also in the nested syntax here, grace notes appear rightly.

'grace-nest5.ly'

Graces notes may have the same duration as the main note.

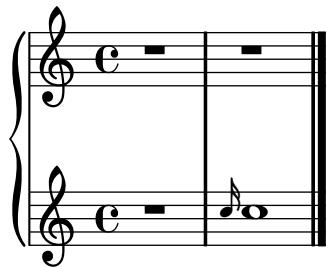

'grace-part-combine.ly'

Grace notes may be put in a partcombiner.

'grace-staff-length.ly'

Stripped version of trip.ly. Staves should be of correct length.

'grace-start.ly'

Pieces may begin with grace notes.

'grace-stem-length.ly'

Stem lengths for grace notes should be shorter than normal notes, if possible. They should never be longer, even if that would lead to beam quanting program.

'grace-stems.ly'

Here `startGraceMusic` should set `no-stem-extend` to true; the two grace beams should be the same here.

'grace-sync.ly'

Grace notes in different voices/staves are synchronized.

Three staves in common time. The top staff has a treble clef and a 'C' key signature. The middle staff has a bass clef and a 'B-flat' key signature. The bottom staff has a treble clef and a 'C' key signature. All three staves contain grace notes that align vertically, demonstrating synchronization across different voices and staves.

'grace-types.ly'

There are three different kinds of grace types: the base grace switches to smaller type, the appoggiatura inserts also a slur, and the acciaccatura inserts a slur and slashes the stem.

'grace-unfold-repeat.ly'

When grace notes are entered with unfolded repeats, line breaks take place before grace notes.

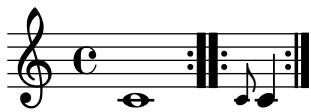

6

'grace-volta-repeat-2.ly'

A volta repeat may begin with a grace. Consecutive ending and starting repeat bars are merged into one :||:.

'grace-volta-repeat.ly'

Repeated music can start with grace notes. Bar checks preceding the grace notes do not cause synchronization effects.

'grace.ly'

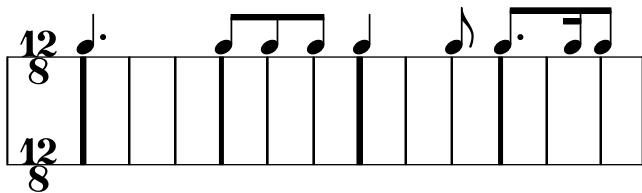

You can have beams, notes, chords, stems etc. within a \grace section. If there are tuplets, the grace notes will not be under the brace.

Main note scripts do not end up on the grace note.

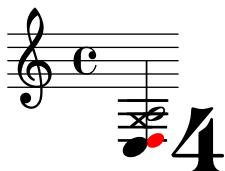

'grid-lines.ly'

With grid lines, vertical lines can be drawn between staves synchronized with the notes.

'grob-tweak.ly'

With the \tweak function, individual grobs that are directly caused by events may be tuned directly.

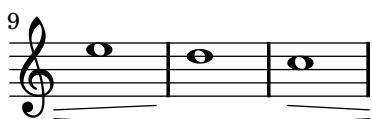

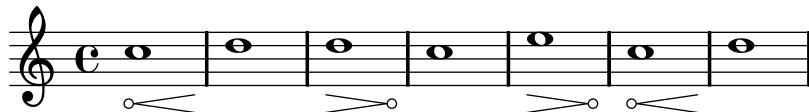

'hairpin-barline-break.ly'

If a hairpin ends on the first note of a new stave, we don't print that ending. But on the previous line, this hairpin should not be left open, and should end at the barline.

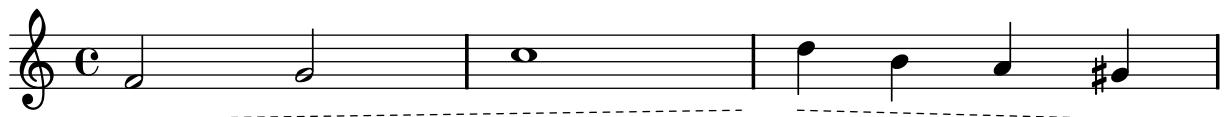

'hairpin-circled.ly'

Hairpins can have circled tips. A decrescendo del niente followed by a crescendo al niente should only print one circle.

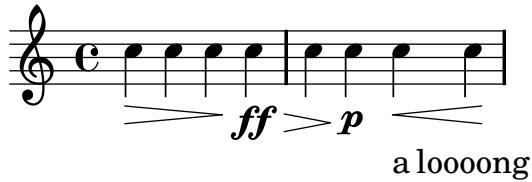

'hairpin-dashed.ly'

Hairpin crescendi may be dashed.

'hairpin-ending.ly'

Hairpin dynamics start under notes if there are no text-dynamics. If there are text dynamics, the hairpin does not run into them.

'hairpin-to-barline.ly'

By setting `hairpinToBarline`, hairpins will stop at the barline preceding the ending note.

'hara-kiri-pianostaff.ly'

Hara-kiri staves kill themselves if they are empty. This example really contains three staves, but as they progress, empty ones are removed: this example has three staves, but some of them disappear: note how the 2nd line only has the bar number 2. (That the bar number is printed might be considered a bug, however, the scenario of all staves disappearing does not happen in practice.)

Any staff brackets and braces are removed, both in the single staff and no staff case.

This example was done with a pianostaff, which has fixed distance alignment; this should not confuse the mechanism.

A piano staff alignment containing three staves. The first staff has a treble clef and a bar number 1 above it. The second staff has a treble clef and a bar number 2 above it. The third staff has a treble clef and a bar number 3 above it. The middle staff is empty because it contains only rests.

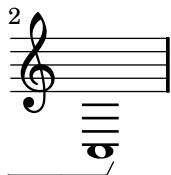

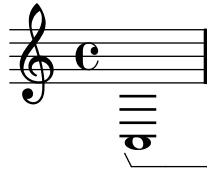

2

A piano staff alignment containing three staves. The first staff has a treble clef and a bar number 1 above it. The second staff has a treble clef and a bar number 2 above it. The third staff has a treble clef and a bar number 3 above it. The middle staff is empty because it contains only rests.

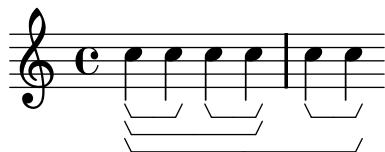

'horizontal-bracket-break.ly'

Horizontal brackets connect over line breaks.

'horizontal-bracket.ly'

Note grouping events are used to indicate where analysis brackets start and end.

'instrument-name-dynamic.ly'

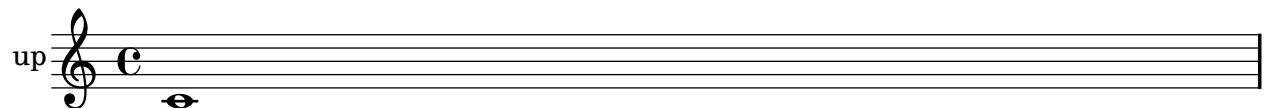

Instrument names (aligned on axis group spanners) ignore dynamic and pedal line spanners.

'instrument-name-hara-kiri.ly'

PianoStaff.instrument and PianoStaff.instr are removed when the staves are killed off.

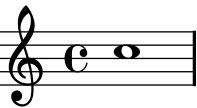

In this example, the 2nd staff (marked by the barnumber 2) disappears as does the instrument name.

`'instrument-name-markup.ly'`

Instrument names are set with `Staff.instrument` and `Staff.instr`. You can enter markup texts to create more funky names, including alterations.

Clarinet*t*
in B \flat

Cl(B \flat)
²

`'instrument-name-partial.ly'`

Instrument names are also printed on partial starting measures.

foo

`'instrument-name.ly'`

Staff margins are also markings attached to barlines. They should be left of the staff, and be centered vertically with respect to the staff. They may be on normal staves, but also on compound staves, like the PianoStaff.

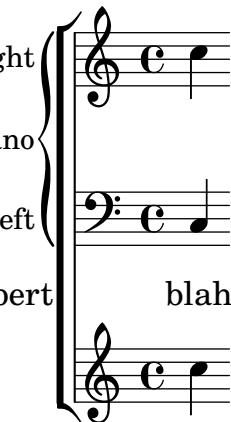

Right

Piano

Left

bert

blah

`'instrument-switch.ly'`

The `switchInstrument` music function modifies properties for an in staff instrument switch.

bl

'key-clefs.ly'

Each clef have own accidental placing rules.

'key-signature-cancellation.ly'

Key cancellation signs consists of naturals for pitches that are not in the new key signature. Naturals get a little padding so the stems don't collide.

'key-signature-scordatura.ly'

By setting `Staff.keySignature` directly, key signatures can be set individually per pitch.

'keys.ly'

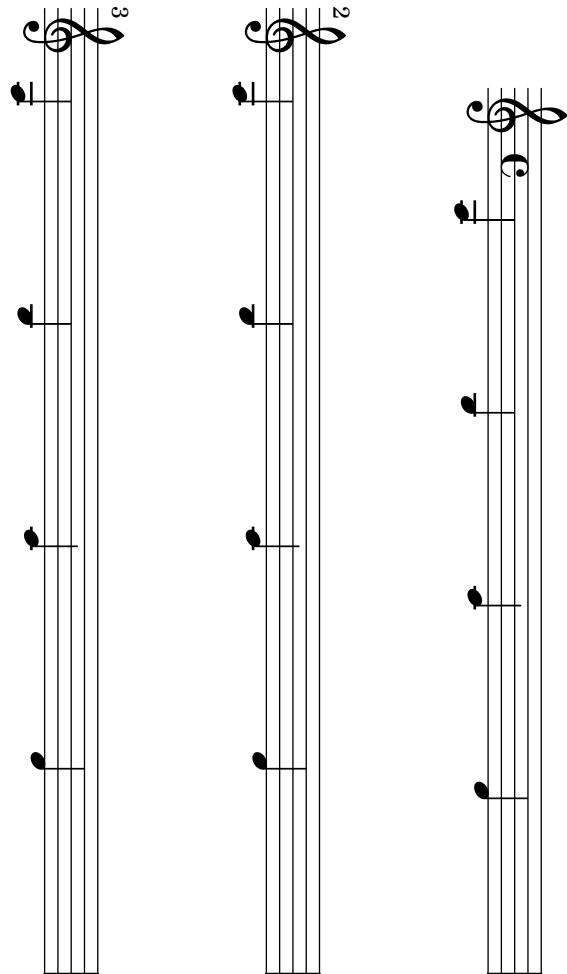

Key signatures may appear on key changes, even without a barline. In the case of a line break, the restoration accidentals are printed at end of a line. If `createKeyOnClefChange` is set, key signatures are created also on a clef change.

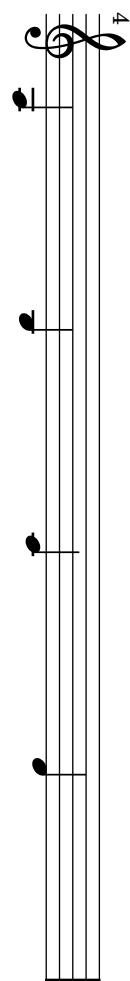

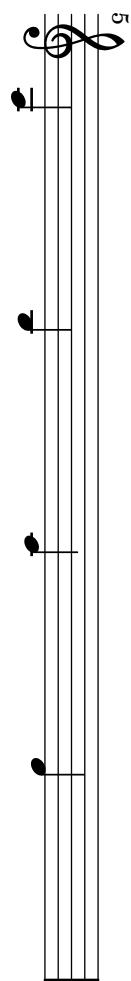

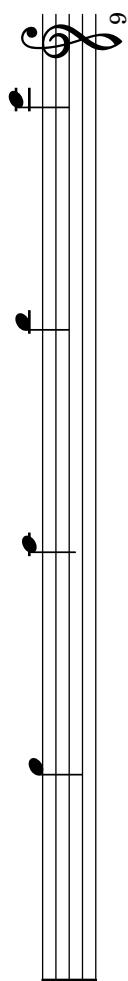

'laissez-vibrer-ties.ly'

l.v. ties should avoid dots and staff lines, similar to normal ties. They have fixed size. Their formatting can be tuned with `tie-configuration`.

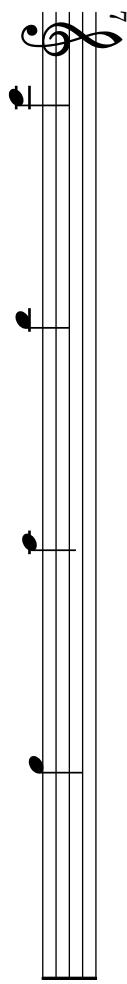

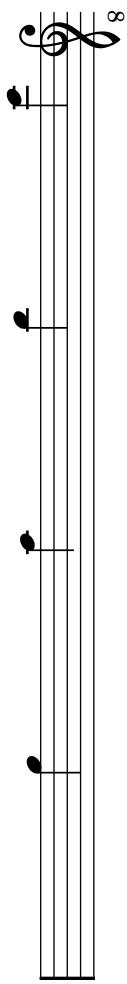

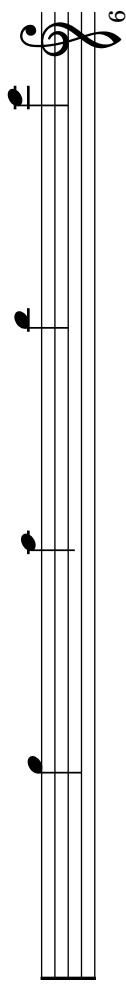

'landscape.ly'

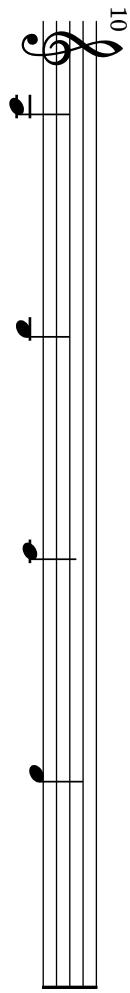

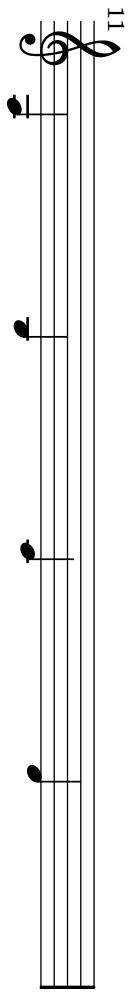

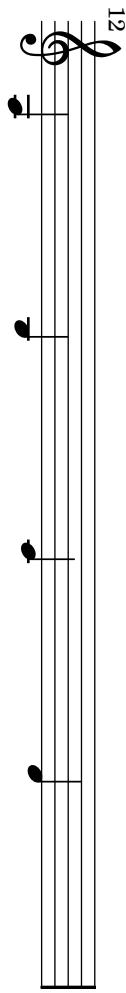

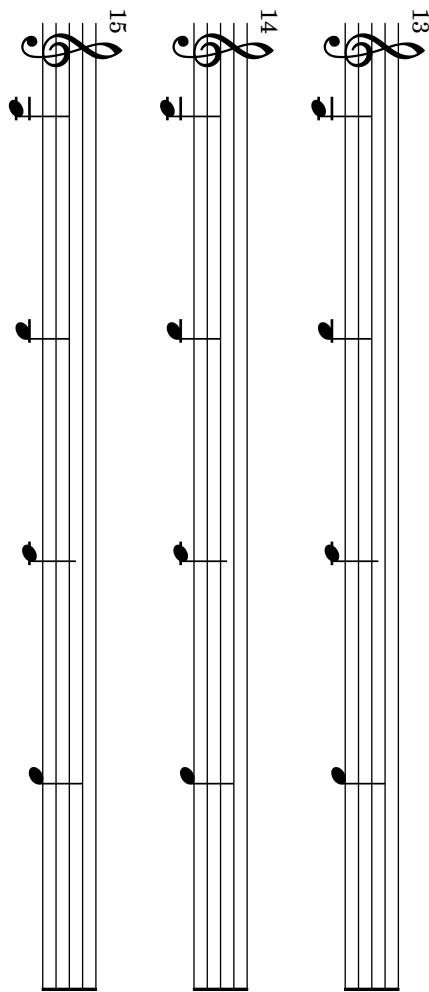

2

3

4

5

‘ledger-line-minimum.ly’

When ledgered notes are very close, for example, in grace notes, they are kept at a minimum distance to prevent the ledgers from disappearing.

‘ledger-line-shorten.ly’

Ledger lines are shortened when they are very close. This ensures that ledgers lines stay separate.

‘lily-in-scheme.ly’

LilyPond syntax can be used inside scheme to build music expressions, with the #`{ ... #}` syntax. Scheme forms can be introduced inside these blocks by escaping them with a \$, both in a LilyPond context or in a Scheme context.

In this example, the `\withpaddingA`, `\withpaddingB` and `\withpaddingC` music functions set different kinds of padding on the `TextScript` grob.

`'line-arrows.ly'`

Arrows can be applied to text-spanners and line-spanners (such as the Glissando)

`'lyric-combine-new.ly'`

With the `\lyricsto` mechanism, individual lyric lines can be associated with one melody line. For each lyric line, can be tuned whether to follow melismata or not.

`'lyric-combine-polyphonic.ly'`

Polyphonic rhythms and rests do not disturb `\lyricsto`.

`'lyric-combine.ly'`

Lyrics can be set to a melody automatically. Excess lyrics will be discarded. Lyrics will not be set over rests. You can have melismata either by setting a property `melismaBusy`, or by setting `automaticMelismas` (which will set melismas during slurs and ties). If you want a different order than first Music, then Lyrics, you must precook a chord of staves/lyrics and label those. Of course, the lyrics ignores any other rhythms in the piece.

la la - - la la la
da - da da - da da

'lyric-extender-broken.ly'

Lyric extenders run to the end of the line if it continues the next line. Otherwise, it should run to the last note of the melisma.

a

3 a

5 ha

'lyric-extender.ly'

A LyricExtender may span several notes. A LyricExtender does not extend past a rest, or past the next lyric syllable.

ah___ ha a.haaaaaaaaaaaa

'lyric-hyphen-break.ly'

Hyphens are print at the beginning of the line only when they go past the first note.

bla - bla

'lyric-hyphen-retain.ly'

The minimum distance between lyrics are determined by the `minimum-distance` of `LyricHyphen` and `LyricSpace`.

The ideal length of a hyphen is determined by its `length` property, but it may be shortened down to `minimum-length` in tight situations. If in this it still does not fit, the hyphen will be omitted.

Like all overrides within `\lyricsto` and `\addlyrics`, the effect of a setting is delayed is one syllable.

syllab word syl-lab word syl-labword

'lyric-hyphen.ly'

In lyrics, hyphens may be used.

blaalb xxxyyy

'lyric-melisma-manual.ly'

Melisma's may be entered manually by substituting `_` for lyrics on notes that are part of the melisma.

Ky - ri_____ e

'lyric-phrasing.ly'

Normally, the lyric is centered on the note head. However, on melismata, the text is left aligned on the left-side of the note head.

alllll_____t d iizzz

'lyric-tie.ly'

Tildes in lyric syllables are converted to tie symbols.

waoa

'lyrics-bar.ly'

Adding a `Bar_engraver` to the `Lyrics` context makes sure that lyrics do not collide with barlines.

A musical score in C major with two staves. The top staff has lyrics: "no Bar Engraver Bar Engraver Bar Engraver". The word "no" is positioned above the first barline, while "Bar Engraver" is repeated three times across the three bars following the barline. The bottom staff is empty. Both staves begin with a treble clef and a common time signature.

'lyrics-melisma-beam.ly'

Melismata are triggered by manual beams.

A musical score in C major with one staff. The lyrics "bla bla bla" are placed under the staff, aligned with the notes. The notes are connected by manual beams. The staff begins with a treble clef and a common time signature.

'lyrics-tenor-clef.ly'

Lyrics are not lowered despite the presence of an octavation 8.

A musical score in C major with one staff. The lyrics "bla bla bla bla" are placed under the staff, aligned with the notes. An octavation 8 indicator is present on the staff. The staff begins with a treble clef and a common time signature.

'markup-arrows.ly'

The feta font has arrow heads

▶ ← ↗ > < ↙

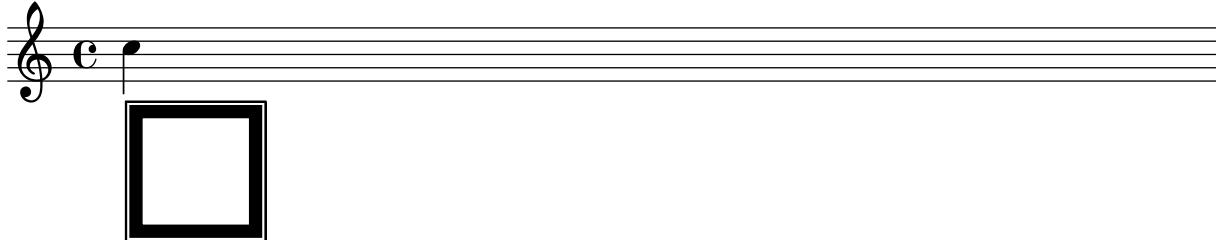

'markup-bidi-pango.ly'

A single pango string is considered to have one direction. The hebrew in this example (including punctuation) is set right-to-left, with the first word (containing 1) on the right.

ליליל, ורזה.

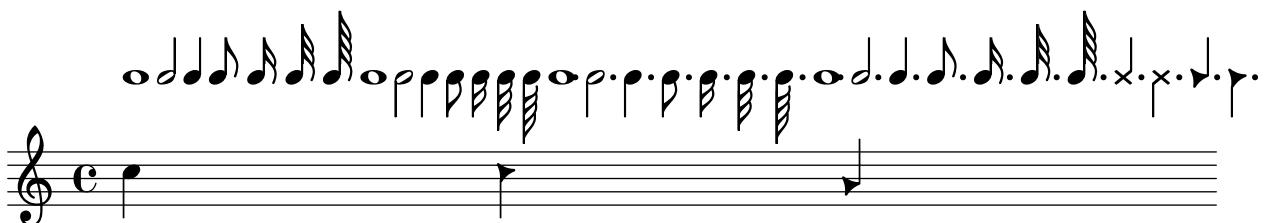

'markup-eps.ly'

The `epsfile` markup command reads an EPS file

'markup-note.ly'

The note markup function may be used to make metronome markings. It works for a variety of flag, dot and duration settings.

'markup-scheme.ly'

There is a Scheme macro `markup` to produce markup texts using a similar syntax as `\markup`.

A musical staff with a treble clef and a 'C' key signature. It features a note head with the text "foo bar[baz
bazr
bla]". To its right is another note head with the text "d X b[string 1
string 2] Norsk ² sfzp A A A A alike".

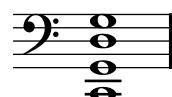

A second musical staff with a treble clef and a 'C' key signature. It features a note head with the text "foo bar[baz
bazr
bla]". To its right is another note head with the text "d X b[string 1
string 2] Norsk ² (p) sfzp A A A A alike".

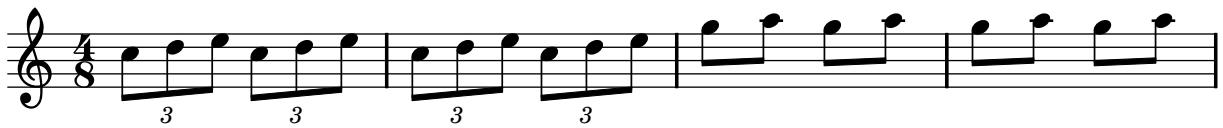

'markup-score.ly'

Use `\score` block as markup command.

Solo Cello Suites Suite IV

Originalstimmung:

'markup-stack.ly'

Markup scripts may be stacked.

a 1
2
3

'markup-syntax.ly'

Demo of markup texts, using LilyPond syntax.

'markup-user.ly'

Own markup commands may be defined by using the `define-markup-command` scheme macro.

'markup-word-wrap.ly'

The markup commands `\wordwrap` and `\justify` produce simple paragraph text.

this is normal text This is a test of the wordwrapping function. 1 This is a continuing test of the wordwrapping function. 2 This is a test of the wordwrapping function. 3 This is a test of the wordwrapping function. 4 1a111 11111 **22222** 2222

BBBBB BB B.B.B.B.B.B.B.B. B.B.

`'mensural.ly'`

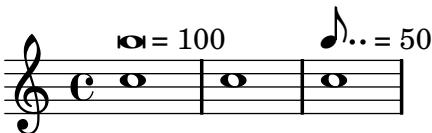

There is limited support for mensural notation: note head shapes are available. Mensural stems are centered on the note heads, both for up and down stems.

`'metronome-marking.ly'`

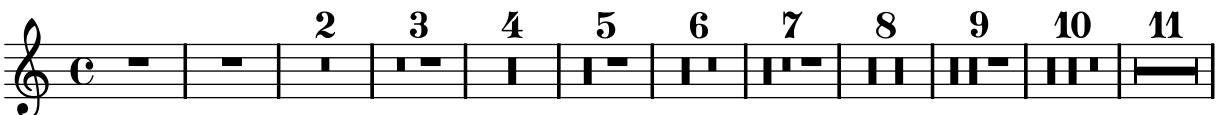

Here `\tempo` directives are printed as metronome markings.

The marking is left aligned with the time signature, if there is one.

`'mm-rests2.ly'`

If `Score.skipBars` is set, the signs for four, two, and one measure rest are combined to produce the graphical representation of rests for up to 10 bars. The number of bars will be written above the sign.

`'multi-measure-rest-center.ly'`

The multimeasure rest is centered exactly between bar lines.

`'multi-measure-rest-grace.ly'`

Multi-measure rests are centered also in the case of grace notes.

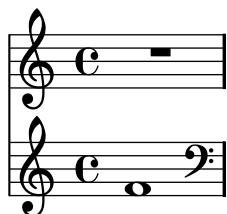

'multi-measure-rest-instr-name.ly'

There are both long and short instrument names. Engraving instrument names should not be confused by the multimeasure rests.

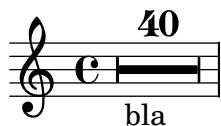

'multi-measure-rest-multi-staff-center.ly'

The centering of multi-measure rests is independent on prefatory matter in other staves.

'multi-measure-rest-spacing.ly'

By setting texts starting with a multi-measure rest, an extra spacing column is created. This should not cause problems.

'multi-measure-rest-text.ly'

Texts may be added to the multi-measure rests.

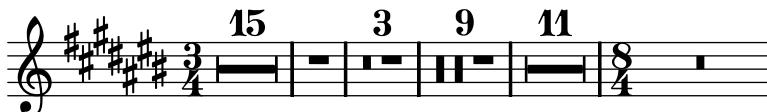

By setting the appropriate **spacing-procedure**, we can make measures stretch to accomodate wide texts.

A musical staff in G clef. The time signature changes between 3/4 and 4/4. Various markings like "inner", "top", "bot", "inner", "Ad lib", and "a1b2c3" are placed under the staff. A very long text, "very very very very very very very long text", is placed over a multi-measure rest.

'multi-measure-rest.ly'

Multi-measure rests do not collide with barlines and clefs. They are not expanded when you set `Score.skipBars`. Although the multi-measure-rest is a Spanner, minimum distances are set to keep it colliding from barlines.

Rests over measures during longer than 2 wholes use breve rests. When more than 10 or more measures (tunable through `expand-limit`) are used then a different symbol is used.

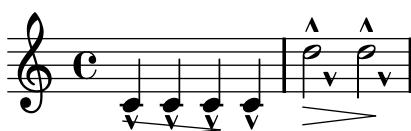

'music-function.ly'

Music function are generic music transformation functions, which can be used to extend music syntax seamlessly. Here we demonstrate a `\myBar` function, which works similar to `\bar`, but is implemented completely in Scheme.

'music-map.ly'

With `music-map`, you can apply functions operating on a single piece of music to an entire music expression. In this example, the the function `notes-to-skip` changes a note to a skip. When applied to an entire music expression in the 1st measure, the scripts and dynamics are left over. These are put onto the 2nd measure.

'newaddlyrics.ly'

newlyrics, multiple stanzas, multiple lyric voices.

My first Li - ly song,
Not much can go wrong!

MY FIRST LI - LY SONG,
NOT MUCH CAN GO WRONG!

`'no-staff.ly'`

The printing of the staff lines may be suppressed by removing the corresponding engraver.

`'non-empty-text.ly'`

By default, text is set with empty horizontal dimensions. The boolean property `no-spacing-rods` in `TextScript` is used to control the horizontal size of text.

A musical staff with a key signature of C major and a tempo marking of 'c'. It contains two eighth notes. Below the staff, the text "very wide and long text" is centered, appearing as a single horizontal line of text.

A musical staff with a key signature of C major and a tempo marking of '2' (two time). It contains two eighth notes. Below the staff, the text "very wide and long text" is centered.

`'note-head-chord.ly'`

Note heads are flipped on the stem to prevent collisions. It also works for whole heads that have invisible stems.

A musical staff with a key signature of C major and a tempo marking of 'c'. It contains three chords: a C major chord (three notes), a G major chord (three notes), and a D major chord (three notes). The note heads are flipped to prevent collisions.

`'note-head-harmonic-whole.ly'`

A harmonic note head must be centered if the base note is a whole note.

A musical staff with a key signature of C major and a tempo marking of 'c'. It contains a whole note followed by a harmonic note head. The harmonic note head is centered above the stem of the whole note.

`'note-head-harmonic.ly'`

The handling of stems for harmonic notes must be completely identical to normal note heads.

Harmonic heads do not get dots. If `harmonicAccidentals` is unset, they also don't get accidentals.

A musical staff with a key signature of C major and a tempo marking of 'c'. It contains a whole note followed by a harmonic note head with a sharp accidental. The harmonic note head has a stem and a dot, just like a normal note head.

‘note-head-solfa.ly’

With `shapeNoteStyles`, the style of the note head is adjusted according to the step of the scale, as measured relative to the `tonic` property.

A musical staff starting at measure 12. It features a treble clef, a key signature of two sharps, and a common time signature. The staff contains several slurs: a short horizontal line above a note, a longer horizontal line above a note, a horizontal line with a small vertical tick below it, and a horizontal line with a small vertical tick above it. There are also grace notes indicated by small vertical stems with dots. The notes include quarter notes, eighth notes, and sixteenth notes.

A musical score page with a treble clef, a key signature of two sharps, and a common time signature. The page number '21' is at the top left. Measures 1 through 10 are shown, each consisting of a single vertical bar line with a note or rest. Measure 1 has a note with a downward arrow. Measure 2 has a note with a horizontal line. Measure 3 has a note with a square above it. Measure 4 has a note with a triangle above it. Measure 5 has a note with a triangle above it and a small circle below it. Measure 6 has a note with a downward arrow. Measure 7 has a note with a triangle above it. Measure 8 has a note with a square above it. Measure 9 has a note with a triangle above it. Measure 10 has a note with a triangle above it.

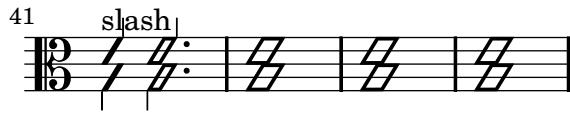

‘note-head-style.ly’

Note head shapes may be set from several choices. The stem endings should be adjusted according to the note head. If you want different note head styles on one stem, you must create a special context.

Harmonic notes have a different shape and different dimensions.

9 neomensural mensural

17 petrucci harmonic

'note-line.ly'

Note head lines (e.g. glissando) run between centers of the note heads.

3

'number-staff-lines.ly'

The number of stafflines of a staff can be set. Ledger lines both on note heads and rests, as well as barlines, are adjusted accordingly.

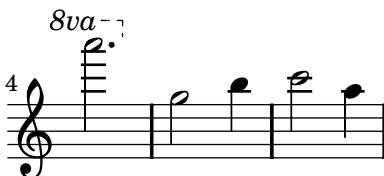

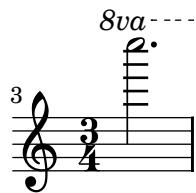

'optimal-page-breaking-hstretch.ly'

The optimal page breaker will stretch the systems horizontally so that the vertical spacing will be more acceptable. The page-spacing-weight parameter controls the relative importance of vertical/horizontal spacing. Because ragged-last-bottom is on, only the first page should be horizontally stretched.

6

`'ottava-broken.ly'`

At line breaks, ottava brackets have no vertical line and their horizontal line does not stick out. The dashed line runs until the end of the line (regardless of prefatory matter).

`'ottava.ly'`

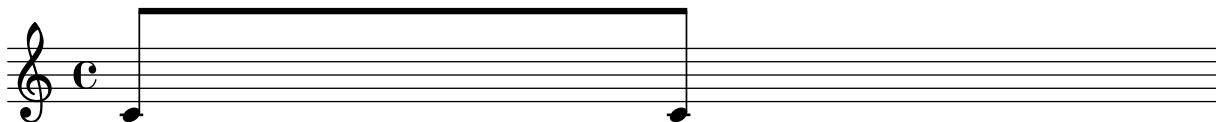

Ottava brackets are supported, through the use of the scheme function `set-octavation`.

The spanner should go below a staff for 8va bassa, and the ottavation string can be tuned with `Staff.ottavation`.

`'override-nest.ly'`

Sublist of grob property lists may be also tuned. In the next example, the `beamed-lengths` property of the `Stem` grob is tweaked.

'page-breaks.ly'

Stress optimal page breaking. This should look nice and even on 4 a6 pages.

Music engraving by LilyPond 2.10.0 4
www.lilypond.org

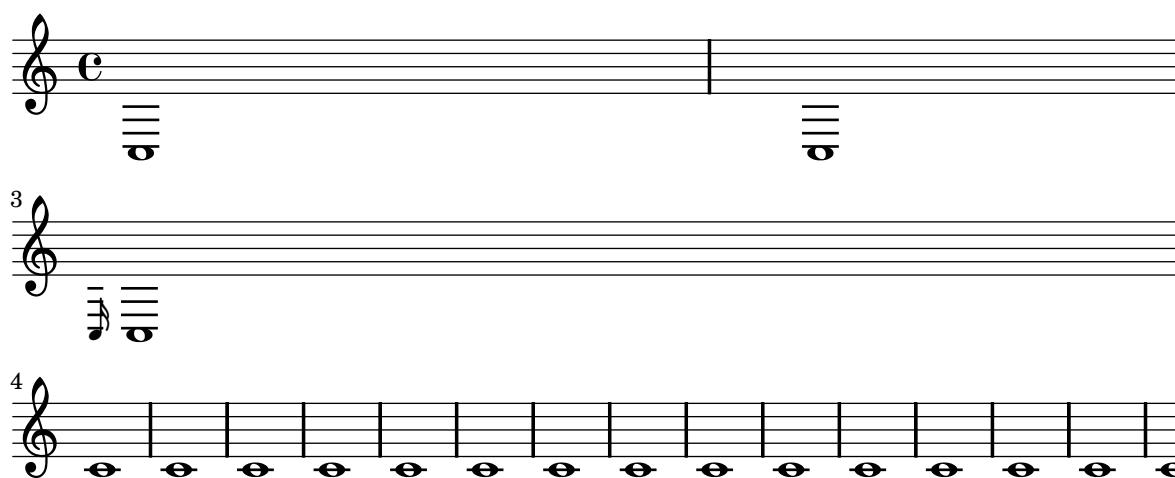

'page-layout-manual-position.ly'

By setting `Y-offset` and `X-offset` for the `line-break-system-details` of `NonMusicalPaperColumn`, systems may be placed absolutely on the printable area of the page.

'page-layout-twopass.ly'

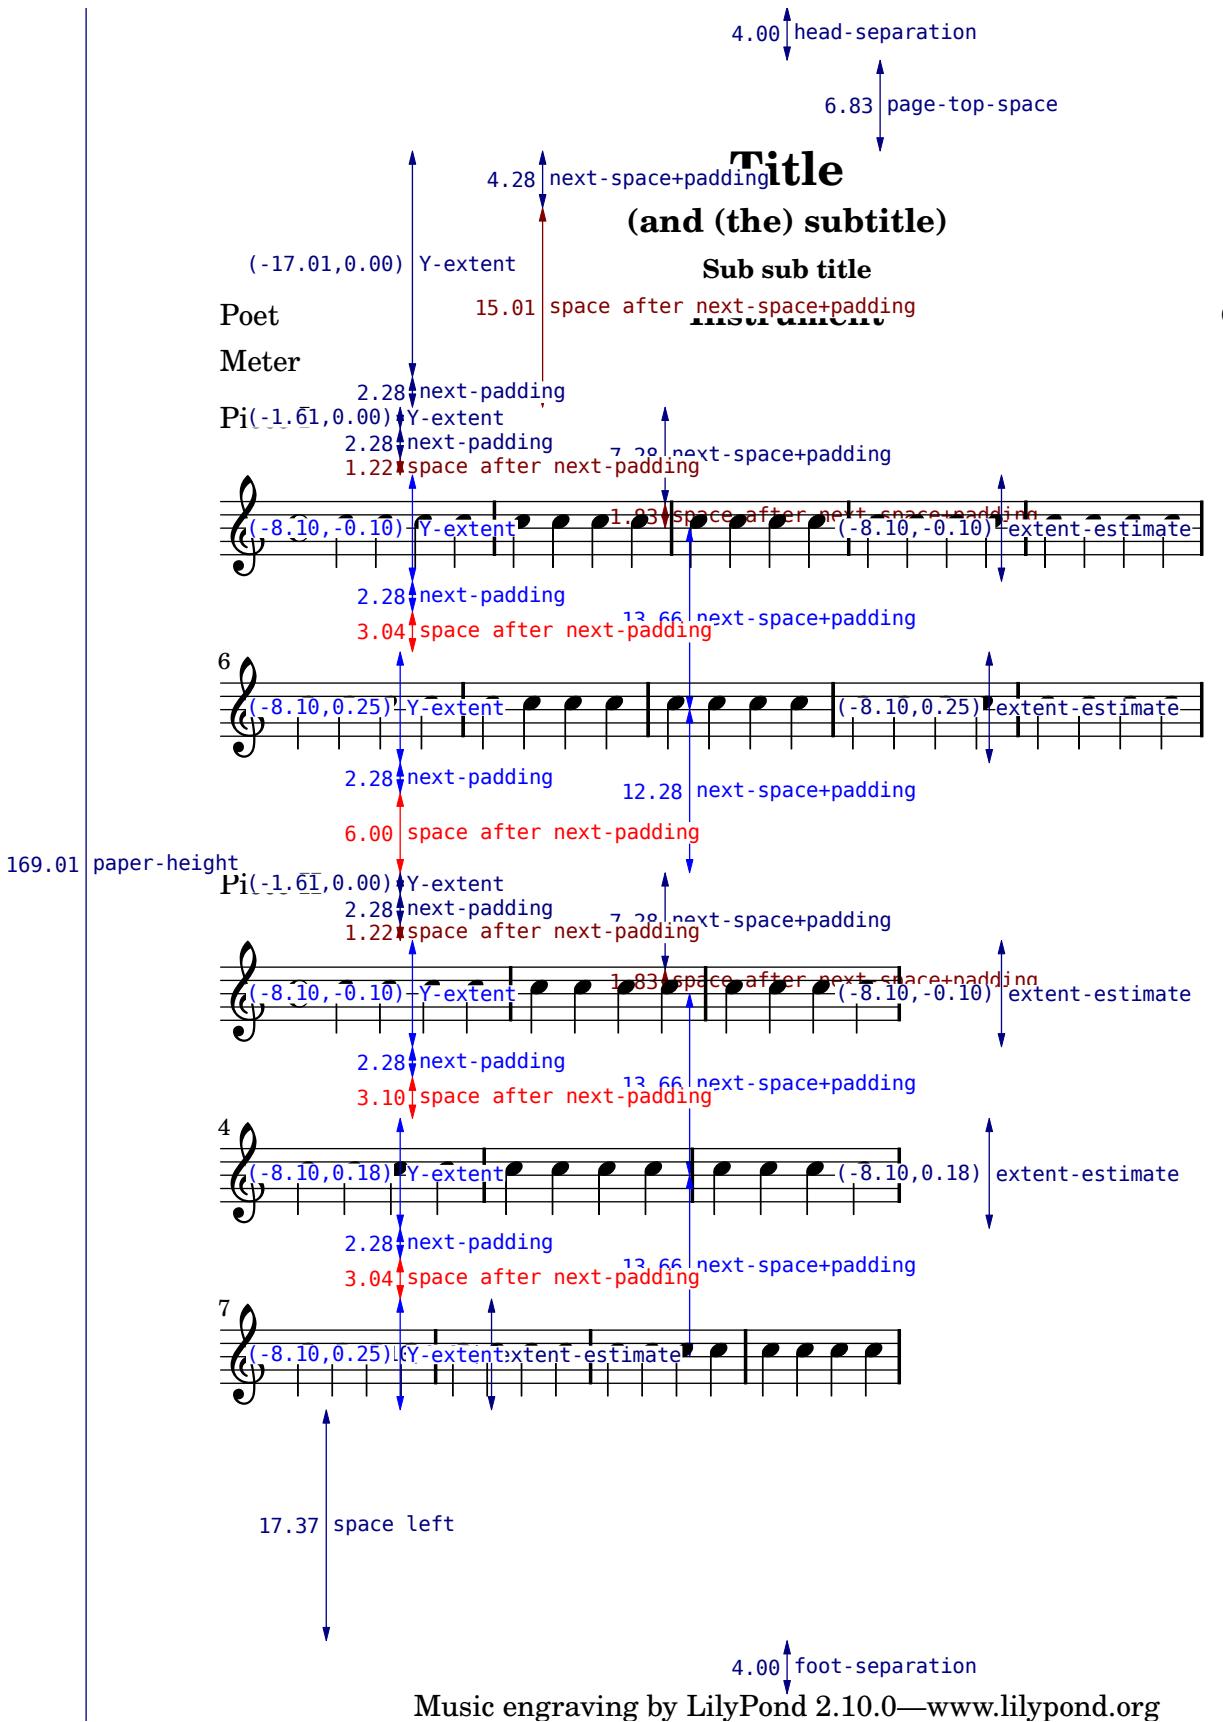

Page breaking details can be stored for later reference.

‘page-layout.ly’

This shows how different settings on \paper modify the general page layout. Basically \paper will set the values for the whole paper while \layout for each \score block.

This file is best viewed outside the collated files document.

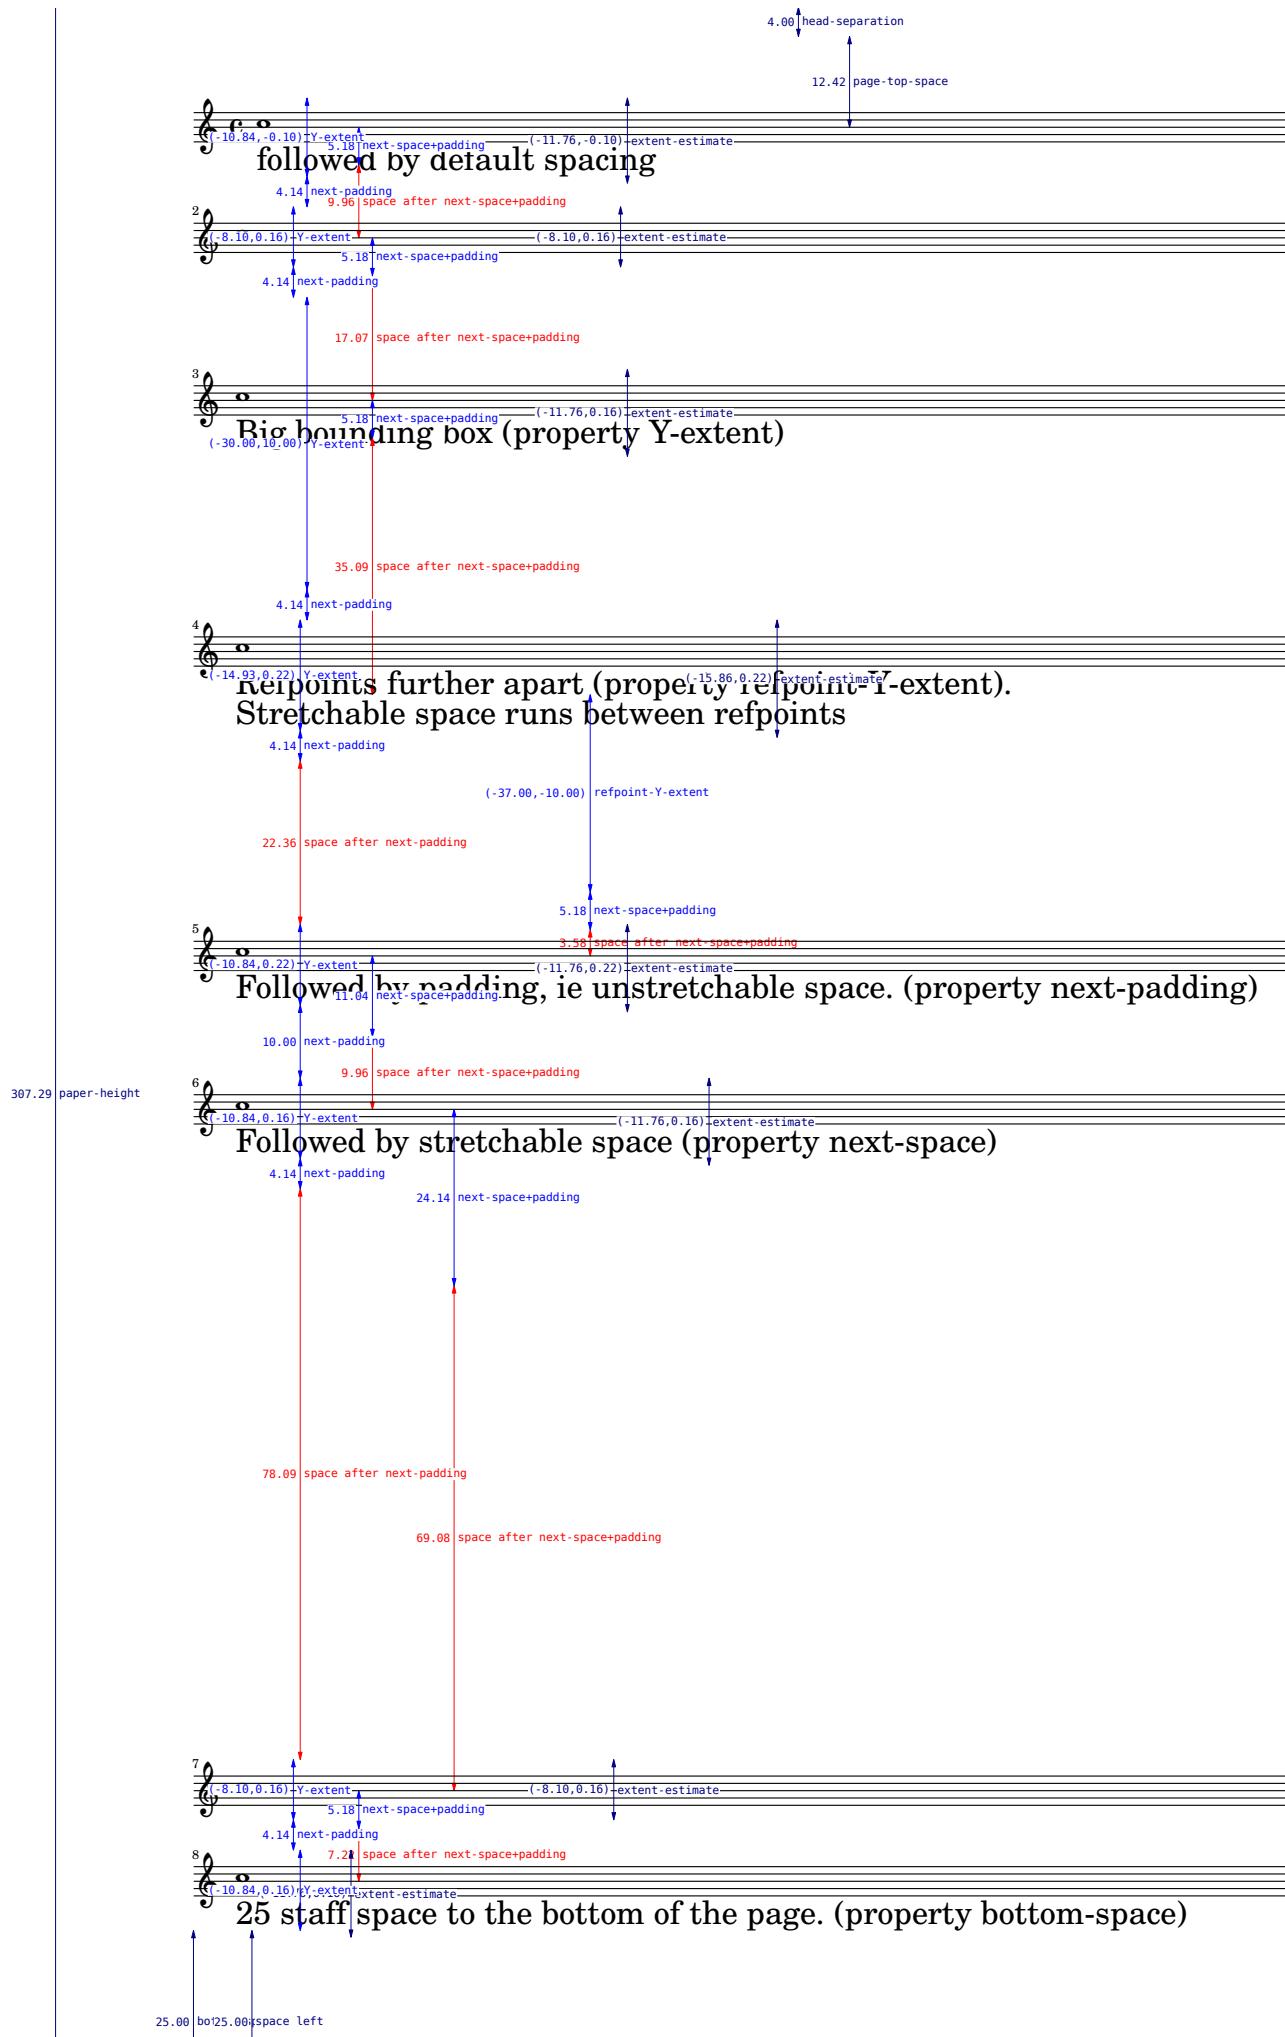

Music engraving by LilyPond 2.10.0—www.lilypond.org

‘page-spacing.ly’

By setting properties in NonMusicalPaperColumn, vertical spacing of page layout can be adjusted.

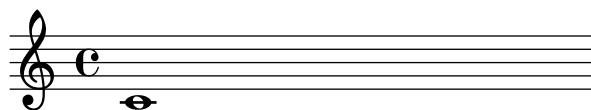

For technical reasons, `overrideProperty` has to be used for setting properties on individual object. `\override` may still be used for global overrides.

By setting `annotate-spacing`, we can see the effect of each property.

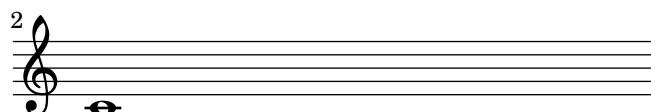

‘page-top-space.ly’

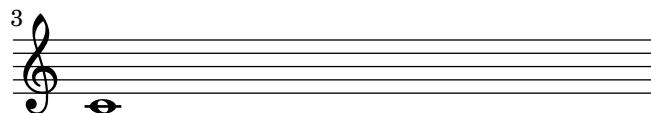

By setting `page-top-space`, the Y position of the first system can be forced to be uniform.

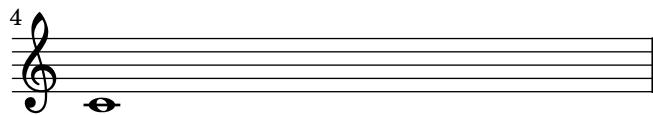

2

3

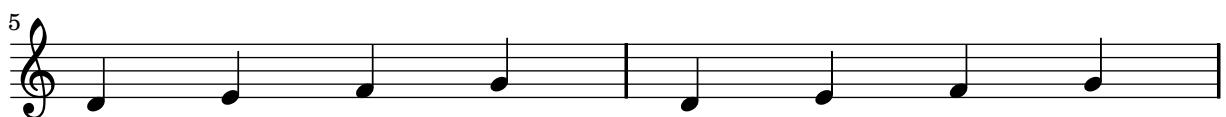

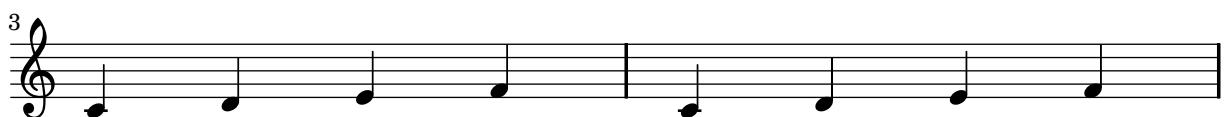

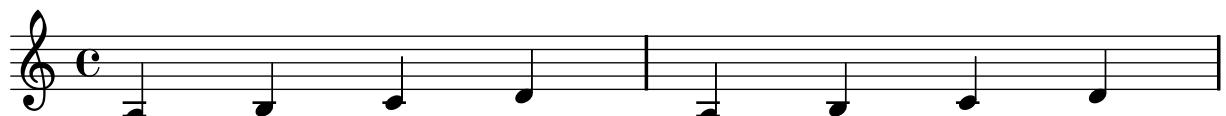

bla

Music engraving by LilyPond 2.10.0—www.lilypond.org

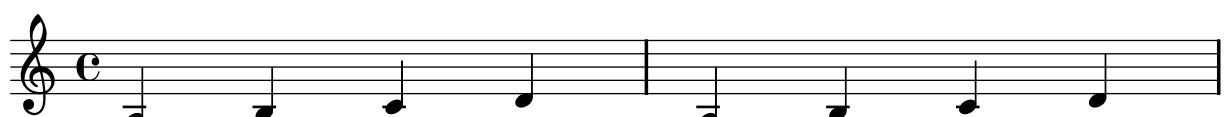

'page-turn-page-breaking-badturns.ly'

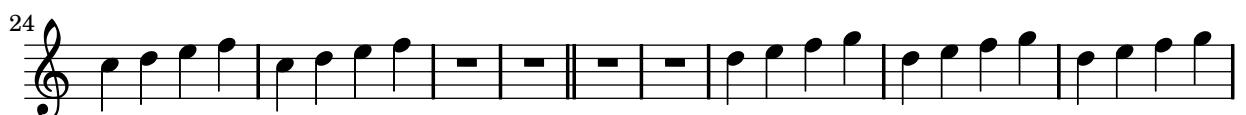

If there are no good places to have a page turn, the optimal-breaker will just have to recover gracefully. This should appear on 3 pages.

'page-turn-page-breaking.ly'

The page-turn breaker will put a page turn after a rest unless there is a 'special' barline within the rest, in which case the turn will go after the special barline.

'parenthesize.ly'

The `parenthesize` function is a special tweak that encloses objects in parentheses. The associated grob is `Score.ParenthesesItem`.

'part-combine-a2.ly'

The `a2` string is printed only on notes (i.e. not on rests), and only after chords, solo or polyphony.

'part-combine-cross.ly'

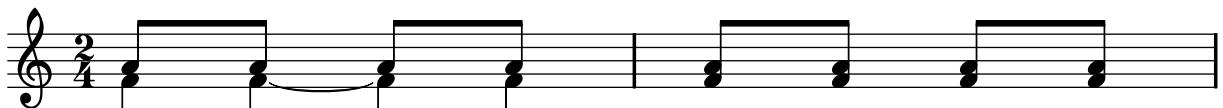

The part combiner stays apart for crossing voices.

'part-combine-global.ly'

The analysis of the part combiner is non-local: in the following example, the decision for using separate voices in the 1st measure is made on the 2nd note, but influences the 1st note.

In the 2nd measure, the pattern without the tie, leads to combined voices.

'part-combine-mmrest-after-solo.ly'

Multimeasure rests are printed after solos, both for solo1 and for solo2.

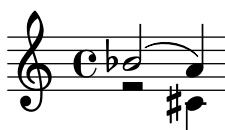

'part-combine-solo-end.ly'

SOLO is printed even if the solo voice ends before the other one. Unfortunately, the multi-rest of the 1st voice (which is 2 bars longer than the 2nd voice) does not get printed.

'part-combine-solo-global.ly'

In this example, solo1 should not be printed over the 1st note, because of the slur which is present from the one-voice to the two-voice situation.

'part-combine-solo.ly'

A solo string can only be printed when a note starts. Hence, in this example, there is no Solo-2 although the 2nd voice has a dotted quarter, while the first voice has a rest.

A Solo indication is only printed once; (shared) rests do not require reprinting a solo indication.

Solo 1/2 can not be used when a spanner is active, so there is no solo over any of the tied notes.

'part-combine-text.ly'

The new part combiner detects a2, solo1 and solo2, and prints i texts accordingly.

'part-combine.ly'

The new part combiner stays apart from:

- different durations,
- different articulations (taking into account only slur/beam/tie), and
- wide pitch ranges.

'pedal-bracket.ly'

The brackets of a piano pedal should start and end at the left side of the note. If a note is shared between two brackets, these ends are flared.

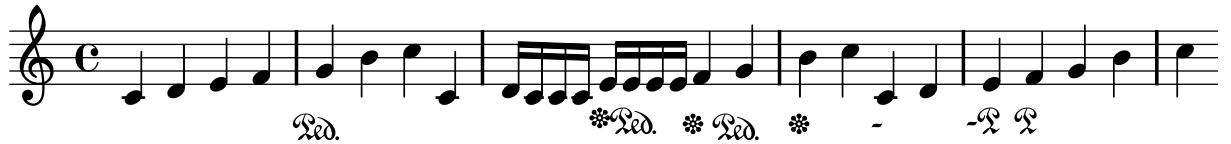

At a line-break, there are no vertical endings.

'pedal-end.ly'

Unterminated piano pedal brackets run to the end of the piece.

'pedal-ped.ly'

The standard piano pedals style comes with Ped symbols. The pedal string can be also tuned, for example, to a shorter tilde/P variant at the end of the melody.

'phrasing-slur-slur-avoid.ly'

PhrasingSlurs go over normal slurs.

'prefatory-empty-spacing.ly'

The A is atop an invisible barline. The barline, although invisible, is also translated because it is the last one of the break alignment.

'prefatory-spacing-matter.ly'

Distances between prefatory items (e.g. clef, bar, etc.) are determined by engraving standards. These distances depend on which items are combined. Mid-line, the order for clef and bar-line is different from the start of line.

'property-grace-polyphony.ly'

Property overrides and reverts from \grace do not interfere with the overrides and reverts from polyphony.

‘property-once.ly’

Once properties take effect during a single time step only.

‘quote-cue-during.ly’

The `cueDuring` form of quotation will set stem directions on both quoted and main voice, and deliver the quoted voice in the `cue Voice`. The music function `\killCues` can remove all cue notes.

Spanners run to the end of a cue section, and are not started on the last note.

The image shows three staves of musical notation side-by-side. The top staff, labeled "quoteMe", contains a single sharp sign in the key signature and features a dynamic marking "ff". The middle staff, labeled "orig (killCues)", has a key signature of C major and includes a rest at the beginning of the second measure. The bottom staff, labeled "orig+quote", also has a key signature of C major and includes a rest at the beginning of the second measure. All three staves show a similar melodic line with stems pointing in various directions due to the `cueDuring` processing.

‘quote-cyclic.ly’

Two quoted voices may refer to each other. In this example, there are notes with each full-bar rest.

‘quote-during.ly’

With `\cueDuring` and `\quoteDuring`, fragments of previously entered music may be quoted. `quotedEventTypes` will determine what things are quoted. In this example, a 16th rests is not quoted, since `rest-event` is not in `quotedEventTypes`.

The image shows three staves of musical notation side-by-side. The top staff, labeled "quoteMe", contains a single sharp sign in the key signature and features a dynamic marking "ff". The middle staff, labeled "orig", has a key signature of C major and includes a rest at the beginning of the second measure. The bottom staff, labeled "orig+quote", also has a key signature of C major and includes a rest at the beginning of the second measure. The "orig+quote" staff shows a 16th note rest where the original rest was, demonstrating that certain events are not quoted.

'quote-grace.ly'

Quotes may contain grace notes. The grace note leading up to an unquoted note is not quoted.

The image shows two staves of musical notation. The top staff is labeled "quoted" and contains a grace note followed by a sixteenth note. The bottom staff is labeled "original" and contains a sixteenth note followed by another sixteenth note. This illustrates that grace notes in quotes are not quoted.

'quote-tie.ly'

Voices from different cues must not be tied together. In this example, the first note has a tie. This note should not be tied to the 2nd note.

The image shows a single staff of musical notation with two notes. The first note has a tie to the second note, which is incorrect according to the rule that voices from different cues must not be tied together.

'quote-transposition.ly'

Quotations take into account the transposition of both source and target. In this example, all instruments play sounding central C, the target is a instrument in F. The target part may be \transposed. In this case, all the pitches (including the quoted ones) will transposed as well.

The image shows two staves of musical notation. The top staff is labeled "clar" and "sax". The bottom staff is also labeled "clar" and "sax", with "up 1 tone" written below it. This illustrates that quotations take into account the transposition of both source and target.

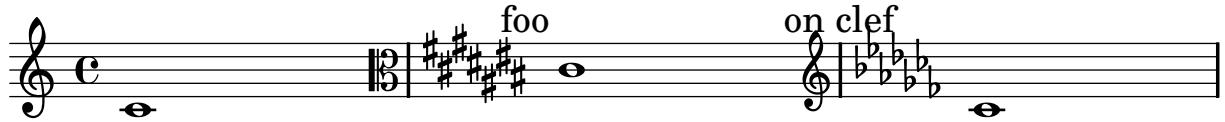

'quote.ly'

With \quote, fragments of previously entered music may be quoted. `quotedEventTypes` will determine what things are quoted. In this example, a 16th rests is not quoted, since `rest-event` is not in `quotedEventTypes`.

The image shows three staves of musical notation. The top staff is labeled "quoteMe" and contains a 16th rest followed by a forte dynamic. The middle staff is labeled "orig" and contains a 16th note followed by a 16th note. The bottom staff is labeled "orig+quote" and contains a 16th note followed by a 16th note, mirroring the original staff. This illustrates that a 16th rest is not quoted, while other events like notes are.

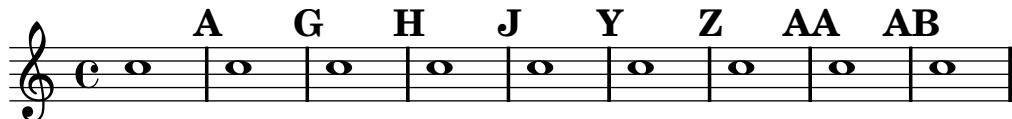

‘rehearsal-mark-align.ly’

The rehearsal mark is put on top a breakable symbol, according to the value of `break-align-symbol` value of the `RehearsalMark`. The same holds for `BarNumber` grobs.

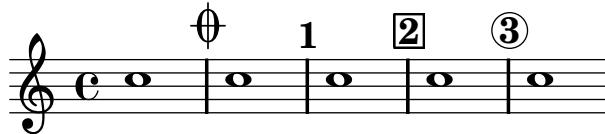

‘rehearsal-mark-letter.ly’

Rehearsal marks in letter style: the I is skipped, and after Z, double letters are used. The mark may be set with `\mark NUMBER`, or with `Score.rehearsalMark`.

‘rehearsal-mark-number.ly’

Marks can be printed as numbers. By setting `markFormatter` we may choose a different style of mark printing. Also, marks can be specified manually, with a markup argument.

‘repeat-fold.ly’

Folded repeat may not make sense without alternatives, and there should not be more alternatives than repeats.

‘repeat-line-break.ly’

Across linebreaks, the left edge of a first and second alternative bracket should be equal.

`'repeat-percent-count.ly'`

Percent repeats get incremental numbers when `countPercentRepeats` is set, to indicate the repeat counts, but only if there are more than two repeats.

`'repeat-percent-grace.ly'`

Percent repeats are also centered when there is a grace note in a parallel staff.

`'repeat-percent-skipbars.ly'`

Percent repeats are not skipped, even when `skipBars` is set.

`'repeat-percent.ly'`

Measure repeats may be nested with beat repeats.

‘repeat-slash.ly’

Within a bar, beat repeats denote that a music snippet should be played again.

‘repeat-tie.ly’

Repeat ties are only connected on the right side to a note head.

‘repeat-unfold-all.ly’

Volta repeats may be unfolded through the music function \unfoldRepeats.

A musical staff in common time (C) with a treble clef. It features a repeat sign with a number '1' above it and a number '2' below it. The first half of the staff has four notes. The second half has five notes. This indicates that the first half of the measure should be repeated, with the repeat sign unfolded to show both halves.

‘repeat-unfold-tremolo.ly’

Unfolding tremolo repeats. All fragments fill one measure with 16th notes exactly.

A musical staff in common time (C) with a treble clef. It shows a repeat sign with a number '1' above it and a number '2' below it. The first half of the staff has four groups of four 16th notes. The second half has five groups of four 16th notes. This indicates that the first half of the measure should be repeated, with the repeat sign unfolded to show both halves filled with 16th notes.

A musical staff in common time (C) with a treble clef. It shows a repeat sign with a number '1' above it and a number '2' below it. The first half of the staff has four groups of four eighth notes. The second half has five groups of four eighth notes. This indicates that the first half of the measure should be repeated, with the repeat sign unfolded to show both halves filled with eighth notes.

‘repeat-unfold.ly’

LilyPond has three modes for repeats: folded, unfolded and semi-unfolded. Unfolded repeats are fully written out. Semi unfolded repeats have the body written and all alternatives sequentially. Folded repeats have the body written and all alternatives simultaneously. If the number of alternatives is larger than the repeat count, the excess alternatives are ignored. If the number of alternatives is smaller, the first alternative is multiplied to get to the number of repeats.

Unfolded behavior:

A musical staff in common time (C) with a treble clef. It shows a repeat sign with a number '1' above it and a number '2' below it. The first half of the staff has four groups of four eighth notes. The second half has five groups of four eighth notes. This indicates that the first half of the measure should be repeated, with the repeat sign unfolded to show both halves filled with eighth notes.

'repeat-volta-skip-alternatives.ly'

When too few alternatives are present, the first alternative is repeated, by printing a range for the 1st repeat.

A musical staff in common time with a treble clef. It features a repeat sign with '1-2' written above it, followed by a barline, and then '3' written above it. The staff contains two measures of music.

'repeat-volta.ly'

Volta (Semi folded) behavior. Voltas can start on non-barline moments. If they don't barlines should still be shown.

A musical staff in common time with a treble clef. It shows three sections of music labeled '3x 0alt', '4x 2alt', and '2x 3alt' from left to right. Above each section is a volta sign consisting of a bracket with '1' at the top and '2' at the bottom, with a horizontal line connecting them.

'rest-collision-beam.ly'

Rests under beams are only moved if necessary.

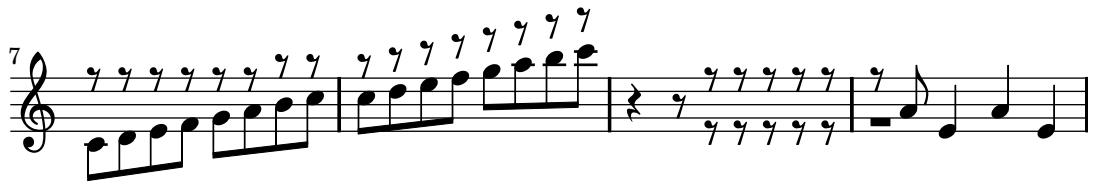

A musical staff in common time with a treble clef. It shows a series of chords with rests under beams. The rests are positioned under the beams without causing collisions with noteheads or stems.

A continuation of the musical staff from the previous section, showing more chords and rests under beams, demonstrating the 'rest-collision-beam.ly' behavior.

'rest-collision.ly'

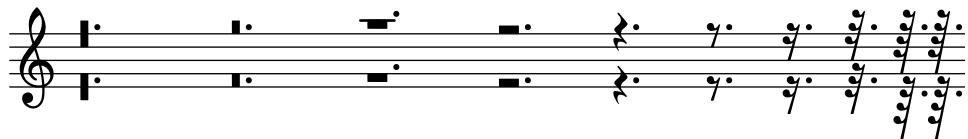

Rests should not collide with beams, stems and noteheads. Rests may be under beams. Rests should be move by integral number of spaces inside the staff, and by half spaces outside. Notice that the half and whole rests just outside the staff get ledger lines in different cases.

A musical staff in common time with a treble clef. It shows a complex pattern of notes, rests, and beams, illustrating the 'rest-collision.ly' behavior where rests do not collide with beams, stems, or noteheads.

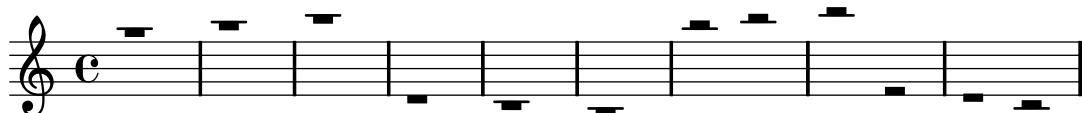

'rest-dot-position.ly'

Dots of rests should follow the rest positions.

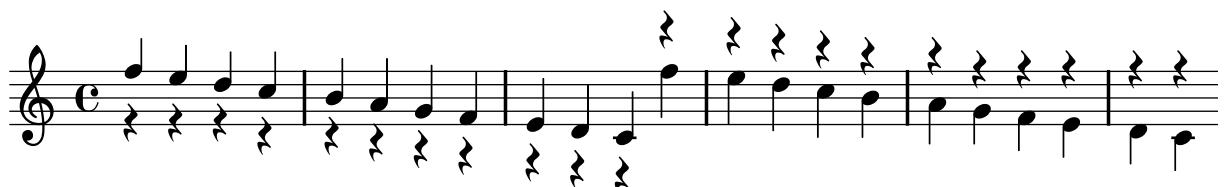

'rest-ledger.ly'

Whole and half rests moving outside the staff should get ledger lines.

'rest-note-collision.ly'

In rest-note collisions, the rest moves in discrete steps, and inside the staff, it moves in whole staff spaces.

'rest-pitch.ly'

Rests can have pitches—these will be affected by transposition and relativization. If a rest has a pitch, rest/rest and beam/rest collision resolving will leave it alone.

'rest-pitched-beam.ly'

Pitched rests under beams.

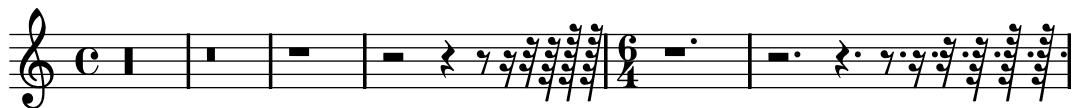

‘rest-polyphonic.ly’

In polyphonic situations, rests are moved down even if there is no opposite note or rest. The amount is two **staff-spaces**.

‘rest.ly’

There is a big variety of rests. Note that the dot of 8th, 16th and 32nd rests rest should be next to the top of the rest. All rests except the whole rest are centered on the middle staff line.

‘rhythmic-staff.ly’

In rhythmic staves stems should go up, and bar lines have the size for a 5 line staff. The whole rest hangs from the rhythmic staff.

‘score-text.ly’

Markup texts are rendered above or below a score.

High up above

My first Li - ly song,

Not much can go wrong!

2. My next Li-ly verse
Now it's getting worse!

3. My last Li-ly text
See what will be next!

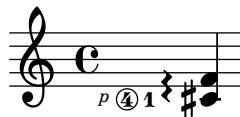

`'script-collision.ly'`

Scripts are put on the utmost head, so they are positioned correctly when there are collisions.

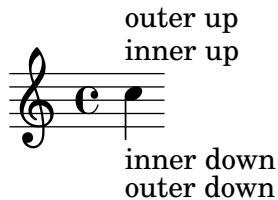

`'script-stack-horizontal.ly'`

horizontal scripts are ordered, so they do not overlap. The order may be set with script-priority.

`'script-stack-order.ly'`

Scripts can be stacked. The order is determined by a priority field, but when objects have the same priority, the input order determines the order. Objects specified first are closest to the note.

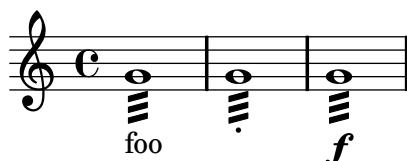

`'script-stacked.ly'`

Scripts may be stacked.

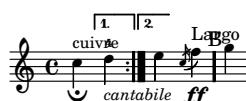

`'script-stem-tremolo.ly'`

Scripts avoid stem tremolos even if there is no visible stem.

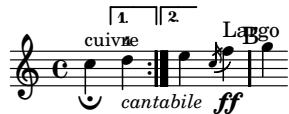

`'size11.ly'`

Different text styles are used for various purposes.

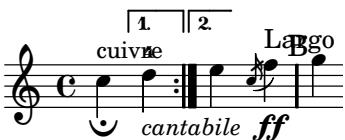

'size13.ly'

Different text styles are used for various purposes.

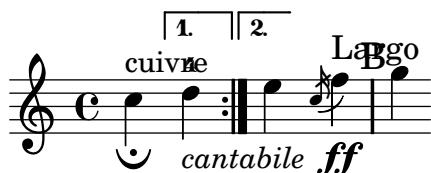

'size16.ly'

Different text styles are used for various purposes.

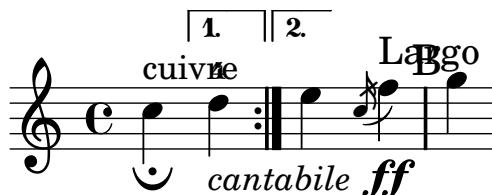

'size20.ly'

Different text styles are used for various purposes.

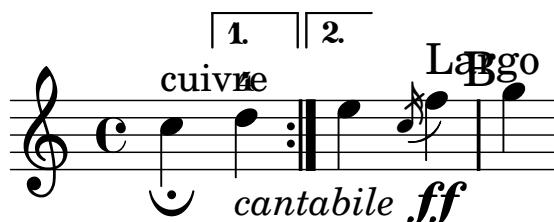

'size23.ly'

Different text styles are used for various purposes.

'size26.ly'

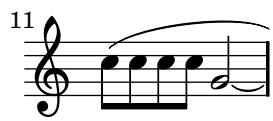

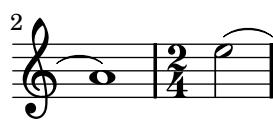

Different text styles are used for various purposes.

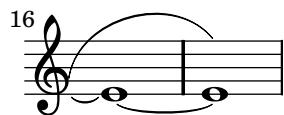

'slur-broken-trend.ly'

Across line breaks, slurs behave nicely. On the left, they extend to just after the preferatory matter, and on the right to the end of the staff. A slur should follow the same vertical direction it would have in unbroken state.

'slur-clef.ly'

'slur-cross-staff.ly'

Slurs behave decently when broken across a linebreak.

'slur-dash.ly'

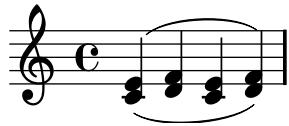

The appearance of slurs may be changed from solid to dotted or dashed.

'slur-dots.ly'

Slurs should not get confused by augmentation dots. With a lot of dots, the problems becomes more visible.

'slur-double.ly'

Some composers use slurs both above and below chords. This can be typeset by setting `doubleSlurs`

'slur-dynamics.ly'

Dynamics avoid collision with slur.

A musical staff in common time (C) with a treble clef. It contains six notes. A dynamic marking 'p' is placed below the first note, and a dynamic marking '<=' is placed below the third note. Both are positioned outside the horizontal slur that spans from the first note to the fifth note.

'slur-extreme.ly'

Extreme slurs are scaled to fit the pattern, but only symmetrically. Asymmetric slurs are created by setting `eccentricity`.

Two staves of music in 6/4 time. The top staff has a treble clef and the bottom staff has a bass clef. Both staves feature long, symmetrical slurs that span multiple notes, fitting perfectly within the measure boundaries.

A single staff of music in 3/4 time. It has a treble clef. The notes are grouped by an asymmetric slur that begins low and arches high to cover a subset of the notes in the measure.

'slur-manual.ly'

Setting `positions` overrides the automatic positioning of the slur. It selects the slur configuration closest to the given pair.

A musical staff in common time (C) with a treble clef. It contains four notes. A horizontal line starts below the first note and ends below the fourth note, enclosing all four notes.

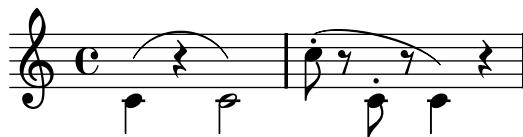

'slur-nice.ly'

Slurs should look nice and symmetric. The curvature may increase only to avoid noteheads, and as little as possible. Slurs never run through noteheads or stems.

'slur-rest.ly'

Slurs may be placed over rest. The slur will avoid colliding with the rest.

'slur-scoring.ly'

Slur formatting is based on scoring. A large number of slurs are generated. Each esthetic aspect gets demerits, the best configuration (with least demerits) wins. This must be tested in one big file, since changing one score parameter for one situation may affect several other situations.

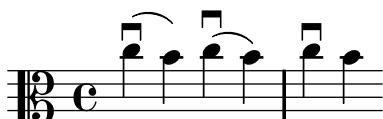

Tunable parameters are in 'scm/slur.scm'.

'slur-script-inside.ly'

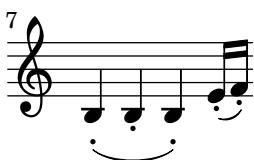

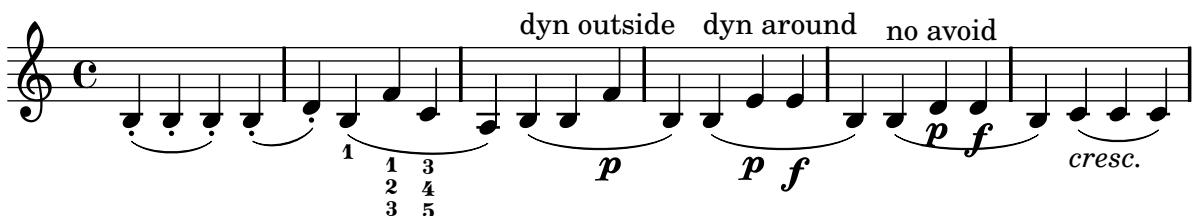

Slurs avoid scripts with `avoid-slur` set to `inside`, scripts avoid slurs with `avoid-slur` set to `around`. Slurs and scripts keep a distance of `slur-padding`.

'slur-script.ly'

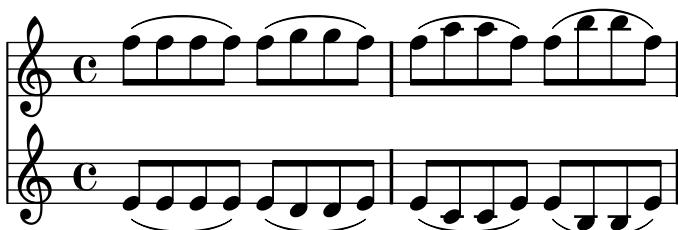

A slur avoids collisions with scripts. Articulations go inside the slur, dynamic markings go outside the slur. Fingerings and texts are placed either inside or outside.

For different configurations, the defaults can be changed, and scripts can be moved manually.

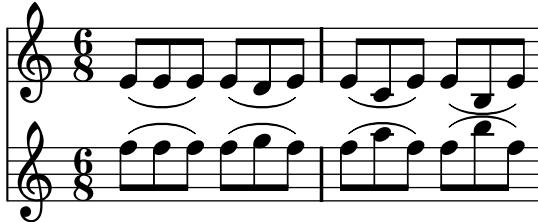

'slur-symmetry-1.ly'

Symmetric figures should lead to symmetric slurs.

'slur-symmetry.ly'

Symmetric figures should lead to symmetric slurs.

'slur-tilt.ly'

The attachment point for strongly sloped slurs is shifted horizontally slightly. Without this correction, slurs will point into one note head, and point over another note head.

'slur-tuplet.ly'

TupletNumber grobs are always inside slurs. This may not work if the slur starts after the tuplet.

'spacing-accidental-staffs.ly'

Accidentals in different staves do not affect the spacing of the eighth notes here.

'spacing-accidental-stretch.ly'

Accidentals do not influence the amount of stretchable space. The accidental does add a little non-stretchable space.

'spacing-accidental.ly'

Accidentals sticking out to the left of a note will take a little more space, but only if the spacing is tight.

'spacing-bar-stem.ly'

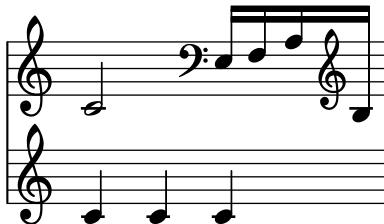

Downstem notes following a barline are printed with some extra space. This is an optical correction similar to juxtaposed stems.

Accidentals after the barline get some space as well.

'spacing-clef-first-note.ly'

Clef changes at the start of a line get much more space than clef changes halfway the line.

'spacing-end-of-line.ly'

Broken engraving of a bar at the end of a line does not upset the space following rests and notes.

'spacing-ended-voice.ly'

A voicelet (a very short voice to get polyphonic chords correct) should not confuse the spacing engine.

'spacing-folded-clef.ly'

A clef can be folded below notes in a different staff, if this does not disrupt the flow of the notes.

'spacing-folded-clef.ly'

A clef can be folded below notes in a different staff, if there is space enough. With `Paper_column` stencil callbacks we can show where columns are in the score.

'spacing-grace-duration.ly'

Spacing uses the duration of the notes, but disregards grace notes for this. In this example, the 8ths around the grace are spaced exactly as the other 8th notes.

'spacing-grace.ly'

Grace note runs have their own spacing variables in `Score.GraceSpacing`. So differing grace note lengths inside a run are spaced accordingly.

'spacing-knee.ly'

For knees, the spacing correction is such that the stems are put at regular distances. This effect takes into account the width of the note heads and the thickness of the stem.

'spacing-loose-grace.ly'

With `strict-grace-spacing`, grace notes don't influence spacing.

`'spacing-multi-tuplet.ly'`

Concurrent tuplets should be equidistant on all staves. Such equidistant spacing is it at odds with elegant engraver spacing; hence it must be switched on explicitly with the `uniform-stretching` property of `SpacingSpanner`.

`'spacing-no-note.ly'`

In the absence of NoteSpacings, wide objects still get extra space. In this case, the slash before the barline gets a little more space.

`'spacing-note-flags.ly'`

The flags of 8th notes take some space, but not too much: the space following a flag is less than the space following a beamed 8th head.

`'spacing-proportional.ly'`

Proportional notation can be created by setting `proportionalNotationDuration`. Notes will be spaced proportional to the distance for the given duration.

`'spacing-ragged-last.ly'`

If `raggedlast` is set, the systems are broken similar to paragraph formatting in text: the last line is unjustified.

A musical staff with 11 measures. Each measure contains a single quarter note. The notes are evenly spaced along the staff.

'spacing-rest.ly'

Rests get a little less space, since they are narrower. However, the quarter rest in feta font is relatively wide, causing this effect to be very small.

A musical staff in 12/4 time. It shows a sequence of eighth notes and quarter rests. The rests are narrower than the notes.

'spacing-section.ly'

New sections for spacing can be started with `newSpacingSection`. In this example, a section is started at the 4/16, and a 16th in the second section takes as much space as a 8th in first section.

A musical staff in 2/4 time. It shows a section change at the 4/16 mark, where the 16th note has the same width as an 8th note.

'spacing-short-notes.ly'

Notes that are shorter than the common shortest note get a space (i.e. without the space needed for the note) proportional to their duration. So, the 16th notes get 1/2 of the space of an eighth note. The total distance for a 16th (which includes note head) is 3/4 of the eighth note.

A musical staff in 2/4 time. It shows a series of sixteenth-note patterns where the stems are correctly spaced before a barline.

'spacing-stem-bar.ly'

Upstem notes before a barline are printed with some extra space. This is an optical correction similar to juxtaposed stems.

A musical staff in 3/8 time. It shows a series of sixteenth-note patterns where upstem notes before a barline have extra space.

'spacing-stem-direction.ly'

There are optical corrections to the spacing of stems. The overlap between two adjacent stems of different direction is used as a measure for how much to correct.

A musical staff in 16/4 time. It shows a series of sixteenth-note patterns with stems of different directions, demonstrating stem spacing correction.

`'spacing-stem-same-direction.ly'`

For juxtaposed chords with the same direction, a slight optical correction is used. It is constant, and works only if two chords have no common head-positions range.

`'spacing-stick-out.ly'`

If `keep-inside-line` is set for the relevant `PaperColumn`, LilyPond will space a line to prevent text sticking out of the right margin.

This is a really long text

`'spacing-strict-notespacing.ly'`

If `strict-note-spacing` is set, then spacing of notes is not influenced by bars and clefs half-way on the system. Rather, they are put just before the note that occurs at the same time. This may cause collisions.

`'spacing-strict-spacing-grace.ly'`

With `strict-note-spacing` spacing for grace notes (even multiple ones), is floating as well.

`'spacing-to-grace.ly'`

Space from a normal note (or barline) to a grace note is smaller than to a normal note.

`'spacing-uniform-stretching.ly'`

Notes are spaced exactly according to durations, if `uniform-stretching` is set. Accidentals are ignored, and no optical-stem spacing is performed.

The image shows two staves of music. The top staff is in common time with a treble clef, and the bottom staff is also in common time with a treble clef. Both staves contain a series of eighth notes. The notes are evenly spaced along their stems, demonstrating uniform stretching. There is a measure number '7' at the bottom center of the bottom staff.

`'span-bar-break.ly'`

At the beginning of a system, the `|:` repeat barline is drawn between the staves, but the `:|` is not.

The image shows a system of music with two staves. The top staff begins with a treble clef and a repeat sign followed by a bar line. The bottom staff begins with a treble clef and a bar line. This indicates a repeat section starting at the beginning of the system, with the repeat sign placed between the staves.

The image shows a system of music with two staves. The top staff begins with a treble clef and a bar line. The bottom staff begins with a treble clef and a bar line. There are vertical lines (span bars) drawn only between the staff bar lines, indicating that bar lines are only shown within systems.

`'span-bar.ly'`

Span bars are drawn only between staff bar lines. By setting bar lines to transparent, they are shown only between systems.

Setting `SpanBar` transparent removes the barlines between systems.

The image shows a system of music with two staves. The top staff begins with a treble clef and a bar line. The bottom staff begins with a treble clef and a bar line. Vertical lines (span bars) are drawn only between the staff bar lines. The lyrics "bla bla foo" are written above the first staff, and "die bar" is written above the second staff. The bar numbers "1" and "2" are positioned above the first and second staves respectively. The bar lines between systems are removed, making them transparent.

'spanner-break-overshoot.ly'

The `break-overshoot` property sets the amount that a spanner (in this case: the beam) in case of a line break extends beyond the rightmost column and extends to the left beyond the prefatory matter.

'staccato-pos.ly'

Some scripts must have quantized positions. Vertical position descend monotonously for a descending scale. The staccato dot is close to the notehead. If the head is in a space, then the dot is in the space next to it.

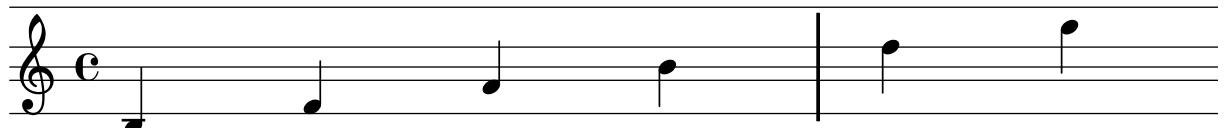

'staff-halfway.ly'

Staves can be started and stopped at command.

'staff-line-positions.ly'

The vertical positions of staff lines may be specified individually, by setting the `line-positions` property of the `StaffSymbol`.

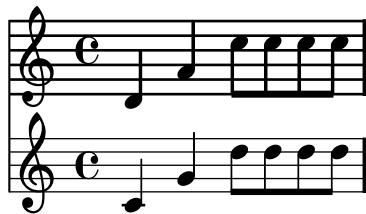

'staff-mixed-size.ly'

Staves may be present in several sizes within a score. This is achieved with an internal scaling factor. If the scaling factor is forgotten in some places, objects generally become too thick or too large on smaller staves.

'staff-tweak.ly'

The staff is a grob (graphical object) which may be adjusted as well, for example, to have 6 thick lines and a slightly large **staff-space**. However, beams remain correctly quantized.

'stanza-number.ly'

Stanza numbers are put left of their lyric. They are aligned in a column.

A musical score consisting of a single staff with a treble clef, a key signature of one sharp, and a tempo marking of 'f'. The staff contains a sixteenth-note pattern. To the left of the staff, the lyrics '1. Foo' and '2. FFooooo' are aligned vertically.

'stem-direction-context.ly'

Stem directions for notes on the middle staff line are determined by the directions of their neighbors.

'stem-direction.ly'

Stems, beams, ties and slurs should behave similarly, when placed on the middle staff line. Of course stem-direction is down for high notes, and up for low notes.

'stem-shorten.ly'

If note head is 'over' the center line, the stem is shortened. This happens with forced stem directions, and with some chord configurations.

'stem-stemlet.ly'

Stemlets are small stems under beams over rests. Their length can be set with `stemlet-length`.

'stem-tremolo-position.ly'

Tremolos are positioned a fixed distance from the end of the beam. Tremolo flags are shortened and made rectangular on beamed notes or on stem-up notes with a flag. Tremolo flags are tilted extra on stem-down notes with a flag.

'stem-tremolo.ly'

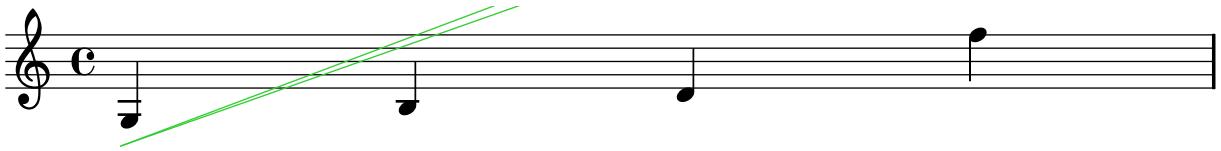

Stem tremolos or rolls are tremolo signs that look like beam segments crossing stems. If the stem is in a beam, the tremolo must be parallel to the beam. If the stem is invisible (e.g. on a whole note), the tremolo must be centered on the note. If the note has a flag (eg. an unbeamed 8th note), the tremolo should be shortened if the stem is up and tilted extra if the stem is down.

The tremolos should be positioned a fixed distance from the end of the stems unless there is no stem, in which case they should be positioned a fixed distance from the note head.

Two complex musical examples. The top example shows a staff with various note values and stems, including a whole note with a flag and a 32nd-note tremolo. Above the staff are numerical values (:4, :8, :16, :32, x, :) followed by a colon, likely indicating different settings for each type of note. The bottom example is a full musical score page numbered 11, featuring multiple staves with various notes, stems, and tremolo patterns.

'stencil-color-rotation.ly'

Combinations of rotation and color do work.

'stencil-hacking.ly'

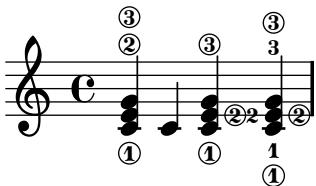

You can write stencil callbacks in Scheme, thus providing custom glyphs for notation elements. A simple example is adding parentheses to existing stencil callbacks.

The parenthesized beam is less successful due to implementation of the Beam. The note head is also rather naive, since the extent of the parens are also not seen by accidentals.

'string-number.ly'

String numbers can be added to chords. They use the same positioning mechanism as finger instructions.

'system-extents.ly'

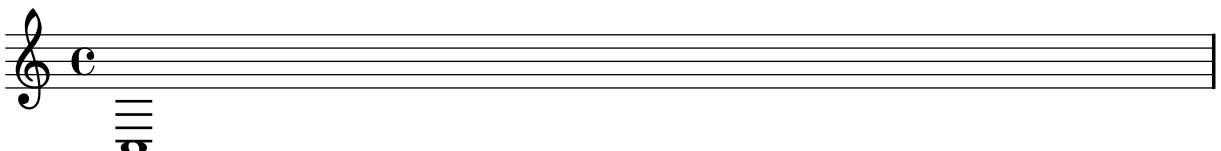

The size of every system is correctly determined; this includes postscript constructs such as slurs.

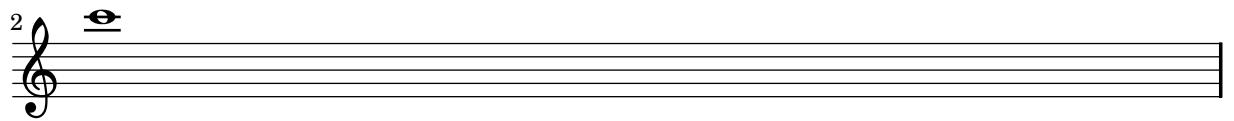

'system-overstrike.ly'

By setting between-system-padding to a negative value, it is possible to eliminate the anti-collision constraints. Then setting `between-system-space` to a low (nonzero) value, print systems in overstrike.

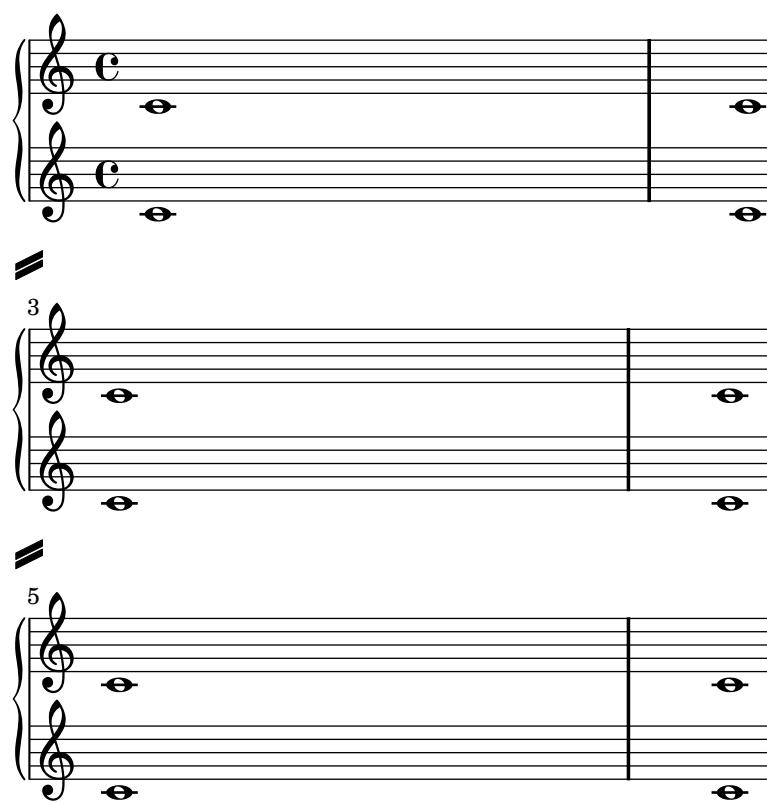

Unfortunately, this does not show in the collated texinfo document. Run this example stand-alone to see the effect.

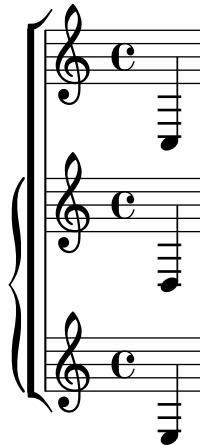

'system-separator.ly'

System separators maybe defined as markups in the `systemSeparator` field of the `bookpaper` block. They are centered between the boundary staffs of each system.

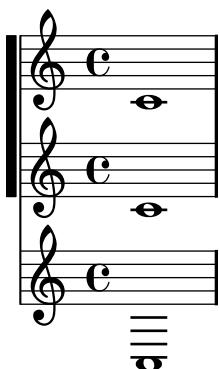

'system-start-bracket.ly'

The piano brace should be shifted horizontally if it is enclosed in a bracket.

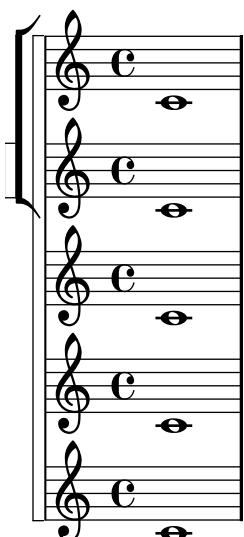

'system-start-heavy-bar.ly'

A heavy-bar system start delimiter may be created by tuning the `SystemStartBar` grob.

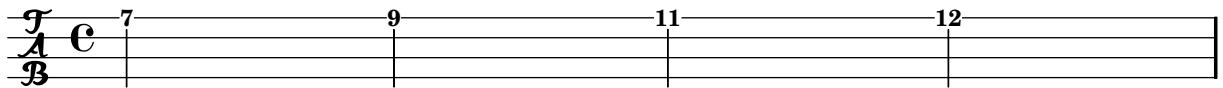

'system-start-nesting.ly'

Deeply nested system braces/brackets/etc. may be created with the `Nested_system_start_delimiter_engraver`

`'tablature-string-tunings.ly'`

For other tunings, it is sufficient to set `stringTunings`. The number of staff lines is adjusted accordingly.

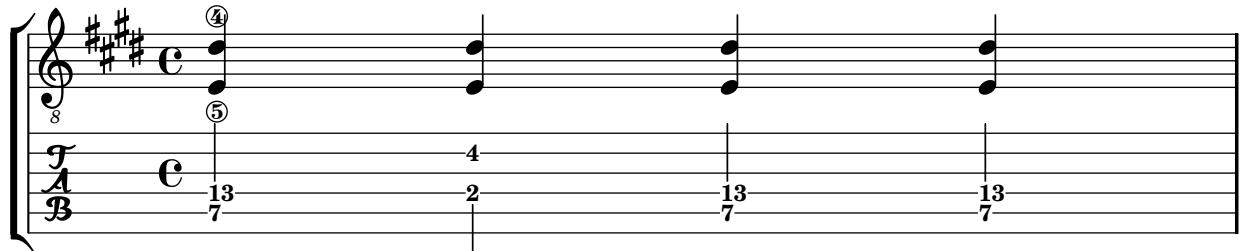

`'tablature.ly'`

A sample tablature, with both normal staff and tab.

Tablature is done by overriding the note-head formatting function, and putting it on a 6-line staff. A special engraver takes care of going from string-number + pitch to number.

String numbers can be entered as note articulations (inside a chord) and chord articulations (outside a chord)

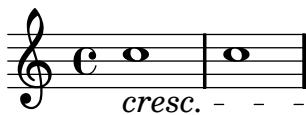

`'tag-filter.ly'`

The `\tag` command marks music expressions with a name. These tagged expressions can be filtered out later. This mechanism can be used to make different versions of the same music. In this example, the top stave displays the music expression with all tags included. The bottom two staves are filtered: the part has cue notes and fingerings, but the score has not.

Three staves labeled 'both', 'part', and 'score'. The 'both' staff shows a note with a 'cue' tag and a '4' tag. The 'part' staff shows a note with a 'cue' tag and a '4' tag. The 'score' staff shows a note with a '4' tag only.

`'text-spanner.ly'`

Text spanners should not repeat start text when broken.

A musical staff consisting of five horizontal lines. A treble clef is positioned on the top line. The number '3' is placed above the staff. Two open circles representing notes are positioned on the first and second lines from the bottom.

'tie-arpeggio-collision.ly'

Advanced tie chord formatting also works with arpeggiated ties. Due to arpeggios, tie directions may be changed relative to the unarpeggiated case.

'tie-arpeggio.ly'

when `tieWaitForNote` is set, the right-tied note does not have to follow the left-tied note directly. When `tieWaitForNote` is set to false, any tie will erase all pending ties.

A musical score for 'The Star-Spangled Banner' in common time. The key signature is C major (no sharps or flats). The melody consists of eighth and sixteenth notes on the treble clef staff. Measures 1-4 begin with a half note followed by a quarter note, then a series of eighth and sixteenth note patterns.

‘tie-broken.ly’

Ties behave properly at line breaks.

A musical staff with a treble clef. The first measure contains two eighth notes. The second measure contains a quarter note followed by a half note.

‘tie-chord-debug.ly’

Switching on debug-tie-scoring annotates the tie scoring decisions made.

5 (0.25): vdist=3.75 TOTAL=45.14
 4 (0.23): vdist=3.63 lhdist=14.51

1 (-0.21): vdist=1.45 lhdist=2.00 rhdist=3.35
 -2 (-0.23): vdist=3.63 lhdist=4.00 length symmm=8.58 pos symmetry=0.25

'tie-chord-partial.ly'

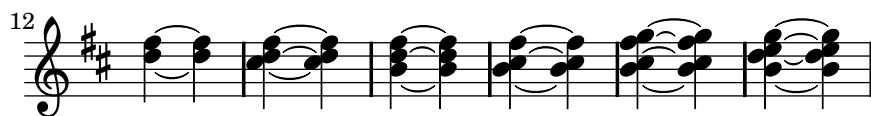

Individual chord notes can also be tied

A musical staff consisting of five horizontal lines. On the first line from the left, there is a treble clef symbol. To its right is a key signature indicator showing a single letter 'C'. Further to the right is a single quarter note.

'tie-chord.ly'

In chords, ties keep closer to the note head vertically, but never collide with heads or stems. Seconds are formatted up/down; the rest of the ties are positioned according to their vertical position.

The code does not handle all cases. Sometimes ties will print on top of or very close to each other. This happens in the last chords of each system.

‘tie-dot.ly’

Ties avoid collisions with dots.

A musical score showing measures 12 and 13. The key signature is one sharp (F#). Measure 12 starts with a half note G, followed by a eighth-note B tied to a sixteenth-note B, a eighth-note C tied to a sixteenth-note C, and a eighth-note D tied to a sixteenth-note D. Measure 13 starts with a eighth-note E tied to a sixteenth-note E, followed by a eighth-note F tied to a sixteenth-note F, a eighth-note G tied to a sixteenth-note G, and a eighth-note A tied to a sixteenth-note A.

‘tie-grace.ly’

Tieing a grace to the to a following grace or main note works.

‘tie-manually’

Tie formatting may be adjusted manually, by setting the `tie-configuration` property. The override should be placed at the second note of the chord.

You can leave a Tie alone by introducing a non-pair value (eg. #t) in the tie-configuration list.

‘tie-semi-single.ly’

Like normal ties, single semities (`LaissezVibrerTie` or `RepeatTie`) get their direction from the stem direction, and may be tweaked with `#'direction`.

'tie-single-manual.ly'

Individual ties may be formatted manually by specifying their direction and/or staff-position.

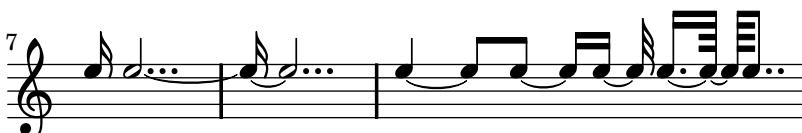

A musical staff featuring a treble clef at the top. A single note, a 'C' in black, is positioned on the second line from the bottom. Above this note is a vertical bar with a small horizontal dash through it, known as a fermata, which indicates that the note should be held longer than its normal value.

‘tie-single.ly’

Formatting for isolated ties.

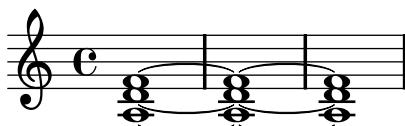

- short ties are in spaces
 - long ties cross staff lines
 - ties avoid flags of left stems.
 - ties avoid dots of left notes.

- short ties are vertically centered in the space, as well those that otherwise don't fit in a space
- extremely short ties are put over the noteheads, instead of inbetween.

'tie-whole.ly'

For whole notes, the inside ties do not cross the center of the note head, horizontally.

'trill-spanner-pitched.ly'

Pitched trills are denoted by a small note head in parentheses following the main note. This note head is properly ledgered, and parentheses include the accidental.

'trill-spanner.ly'

Trill spanner

'tuplet-beam.ly'

In combination with a beam, the bracket of the tuplet bracket is removed. This only happens if there is one beam, as long as the bracket.

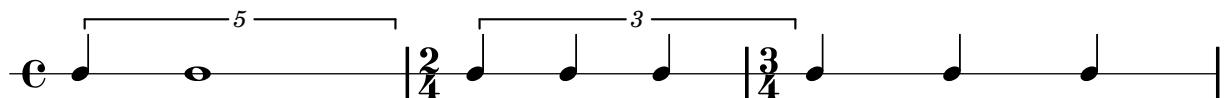

'tuplet-broken.ly'

Broken tuplets are adorned with little arrows. The arrows come from the `edge-text` property, and thus be replaced with larger glyphs or other text.

'tuplet-full-length-note.ly'

tuplet can be made to run to prefatory matter or the next note, by setting `tupletFullLengthNote`.

'tuplet-full-length.ly'

If `tupletFullLength` is set, tuplets end at the start of the next non-tuplet note.

'tuplet-gap.ly'

The size of the tuplet bracket gap is adjusted to the width of the text.

'tuplet-nest.ly'

Tuplets may be nested.

A musical staff in common time (C) with a treble clef. It contains two measures. The first measure has a bracket over three notes labeled '3:2'. This bracket is itself nested within a larger bracket over six notes labeled '6:4'. This large bracket is further nested within a bracket over nine notes labeled '5:3'. The second measure has a similar structure: a bracket over two notes labeled '3:2' is nested within a bracket over four notes labeled '6:4', which is itself nested within a bracket over seven notes labeled '5:3'.

'tuplet-properties.ly'

Tuplet bracket formatting supports numerous options, for instance, bracketed (B) and non-bracketed (NB).

A musical staff in common time (C) with a treble clef. It shows various tuplet bracketing options. From left to right: a bracket over three notes labeled '3' (NB), a bracket over three notes labeled '3' (B), a bracket over four notes labeled '4' (B), a bracket over six notes labeled '6' (up, no digit), a bracket over six notes labeled '6' (angled edges), a bracket over three notes labeled '3' (shorter, no edges), and a bracket over three notes labeled '3' (B).

'tuplet-rest.ly'

Tuplets may contain rests.

A musical staff in common time (C) with a treble clef. It shows a series of eighth-note rests grouped by a bracket labeled '3'. Below the staff, a vertical bracket labeled '3' indicates the grouping of the rests.

'tuplet-slope.ly'

Tuplet brackets stay clear of the staff. The slope is determined by the graphical characteristic of the notes, but if the musical pattern does not follow graphical slope, then the bracket is horizontal.

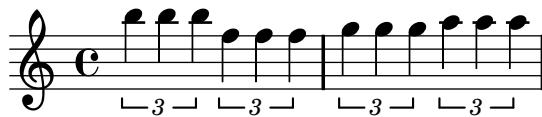

The bracket direction is determined by the dominating stem direction.

A musical staff in common time (C) with a treble clef. It shows a series of eighth notes grouped by a bracket labeled '5'. The bracket is horizontal because the notes do not follow the graphical slope of the staff.

A musical staff in common time (C) with a treble clef. It shows a single bracket labeled '5' spanning five notes.

`'tuplet-staffline-collision.ly'`

Horizontal tuplet brackets are shifted vertically to avoid staff line collisions.

`'tuplets.ly'`

Tuplets are indicated by a bracket with a number. There should be no bracket if there is a beam exactly matching the length of the tuplet. The bracket does not interfere with the stafflines, and the number is centered in the gap in the bracket.

The bracket stops at the end of the stems, if the stems have the same direction as the bracket. The endings can be adjusted with `bracket-flare`.

`'utf-8-mixed-text.ly'`

words in mixed font in a single string are separated by spaces as in the input string. Here a Russian word followed by a roman word.

Hallo

‘utf-8.ly’

Various scripts may be used for texts (like titles and lyrics) introduced by entering them in UTF-8 encoding, and using a Pango based backend. Depending on the fonts installed, this fragment will render Bulgarian (Cyrillic), Hebrew, Japanese and Portuguese.

A musical score in common time (indicated by 'c') with a treble clef. The lyrics are as follows:

いろはにはへど ちりぬるを わがよたれぞ つねならむ
à vo cê uma

うゐのおくや まけふこえて あさきゆめみじ
can ção legal

‘voice-follower.ly’

Whenever a voice switches to another staff a line connecting the notes can be printed automatically. This is enabled if the property `followVoice` is set to true.

A musical score with two staves. The top staff has a treble clef and a 'c' indicating common time. The bottom staff has a bass clef and a 'c'. A vertical line connects the two staves at their left edge, with a short diagonal line extending from the top staff's note to the bottom staff's note.

‘volta-broken-left-edge.ly’

Broken volta spanners behave correctly at their left edge in all cases.

A musical score in 3/4 time (indicated by '3') with a bass clef. It features a broken volta spanner that correctly connects the first two measures of the first system to the first measure of the second system. The first system ends with a double bar line and repeat dots, and the second system begins with a single bar line and repeat dots.

'volta-multi-staff.ly'

By setting `voltaOnThisStaff`, repeats can be put also over other staves than the topmost one in a score.

The image shows two identical staves of musical notation. Each staff has a treble clef and four horizontal lines. The first measure contains a note labeled 'c' and a note labeled 'o'. The second measure contains a note labeled 'o' and a note labeled 'c'. A vertical bar line separates the measures. Above the top staff, there is a bracketed measure number '1' above a vertical bar line, and '2' above another vertical bar line. Below the bottom staff, there is a similar bracketed measure number '1' above a vertical bar line, and '2' above another vertical bar line.

'whiteout.ly'

The whiteout command underlays a white box under a markup. The whitening effect only is only guaranteed for staff lines, since staff lines are in a different layer.

The image shows a single staff of musical notation. It features a treble clef and four horizontal lines. In the first measure, there is a note labeled 'c' and a note labeled 'o'. In the second measure, there is a note labeled 'o' and a note labeled 'c'. A vertical bar line separates the measures. Between the two measures, there is a label 'foo' positioned below the staff lines. The label 'foo' is enclosed in a white rectangular box, which is a result of the 'whiteout' command.
